Machine Learners: Archaeology of a Data Practice ...

Archaeological Machine Learning promises to be a critical and historic inflection point for the field of archaeology. In particular machine learning can help unlock critical bottlenecks in the surveying and analysis functions of archaeology. Excavation is likely to remain highly manual because of the delicacy required to handle historical artifacts.

Computer vision and machine learning for archaeology

Machine learning model and Neural Networks helps in extracting archaic information about human civilization. Archaeology is the gateway to our past. It describes events which shaped the world how it is today and the transition that led humans from animal-hunter to a knowledgeable-mosaic. In archaeology, Stone Age holds the key relevance.

Archaeologists discover new sites through deep learning

His archaeology of the operational formation of machine learning does not unearth the footprint of a strategic monolith but reveals the local tributaries of force that feed into the generalization and plurality of the field.

Machine learning aids search for superhard materials ...

Deep learning techniques are accelerating the rate at which archaeologists discover new archaeological sites and other potential locations of interest. The ubiquity of remote sensor data in this field cuts down on the manual work once relegated to humans. Image recognition via machine learning also helps archaeologists shift energy from identification to verification, according to the outlet.
