Fluid therapy is one of the most important, yet controversial, aspects of therapy in veterinary medicine. Opinions differ as to how best to provide fluid therapy in different disease states. Recognizing these differences, the author provides guidelines for the safe implementation of fluid and transfusion therapy in clinical practice. The text first describes the physiologic fluid compartments of the body and how fluid travels from place to place within the body. Clinical chapters then deal with how to place and maintain intravenous and intraosseous catheters, with crystalloids and colloids, with transfusion medicine, with the diagnosis and treatment of electrolyte disorders, and with shock and resuscitation. Clinical cases reinforce the principles and concepts described and the book is fully illustrated throughout. The Color Handbook is designed to appeal alike to veterinary practitioners, to technicians/nurses and to veterinary students.
