Move over, Miss Marple—Mark Reutlinger's charming cozy debut, the short novel *Mrs. Kaplan and the Matzoh Ball of Death*, introduces readers to the unforgettable amateur sleuth Rose Kaplan and her loyal sidekick, Ida. Everyone knows that Rose Kaplan makes the best matzoh ball soup around—she's a regular matzoh ball maven—so it's no surprise at the Julius and Rebecca Cohen Home for Jewish Seniors when, once again, Mrs. K wins the honor of preparing the beloved dish for the Home's seder on the first night of Passover. But when Bertha Finkelstein is discovered facedown in her bowl of soup, her death puts a bit of a pall on the rest of the seder. And things go really meshugge when it comes out that Bertha choked on a diamond earring earlier stolen from resident Daisy Goldfarb. Suddenly Mrs. K is the prime suspect in the police investigation of both theft and murder. Oy vey—it's a recipe for disaster, unless Rose and her dear friend Ida can summon up the chutzpah to face down the police and solve the mystery themselves. Praise for *Mrs. Kaplan and the Matzoh Ball of Death* "Is there kosher food in jail? These two heroines have gotten themselves in quite a pickle! Well, it's a matzoh ball mess, really. Too deliciously funny!"—Rita Mae Brown, bestselling

author of *Nine Lives to Die* "If you like humorous cozy mysteries like those featuring Miss Marple, then this new take on them might really appeal to you."—Popcorn Reads "Good book. Good mystery. Good humor. All around it's a solid 'A' to me and definitely worth a read."—Bell, Book & Candle "If you're on the hunt for a fun, mild-mannered mystery full of larger-than-life characters and more Yiddish expressions than you can shake a schtickl at, look no further than Mark Reutlinger's *Mrs. Kaplan and the Matzoh Ball of Death*."—Smitten by Books "A delightful cozy mystery . . . The writing was simple and easy to follow for the most part, the plot fun and funny, characters engaging."—Open Book Society

This monograph demonstrates the interplay between Shannon information and semantic information in cognition. It shows that Shannon's information acts as driving force for the formation of semantic information; and vice versa, namely, that semantic information participates in the formation of Shannonian information. The authors show that in cognition, Shannonian and semantic information are interrelated as two aspects of a cognitive process termed as information adaptation. In the latter the mind/brain adapts to the environment by the deflating and/or inflating of the information conveyed by the environment. In the process of information adaptation, quantitative variations in Shannon's information entail different meanings while different meanings affect the quantity of information. The book illustrates the above conceptually and mathematically by reference to three cognitive processes: pattern recognition, face learning and the recognition of a moving object.

For a happy relationship with your cat, go beyond the looks and make your pick based on demonstrated breed behavior. This is

the advice of the Harts, two experts in animal communication and behavior, whose new book takes the process of selecting a cat to the next level by offering data-based behavioral profiles of a wide range of cat breeds. Developed over a lifetime of research and through extensive interviews with eighty veterinary experts, the profiles are presented in easy-to-use graphical form. A history of the development of different breeds is presented, and then breed-specific differences across a range of variables are discussed. These include twelve behavioral traits, in areas such as affection, sociality, activity level, and litter box use. After giving guidance about choosing a cat, the authors present some strategies for avoiding problem behaviors and resolving those that emerge. They also share fascinating theories about the origins of various common cat behaviors, including purring, yawning, eating grass, "flipping out" on catnip, and staking out territory. While the focus is on purebred cats, there is also lots of good information for owners of blends. The book ends with helpful guidance on further reading. Based on the latest science, this is a great book for anyone interested in the fundamental building blocks of feline behavior, and an invaluable handbook for cat owners.

What's the favorite four-letter word of people who are less than fully organized? "Help!" So many technological, social, and economic changes affect your life that you need organization just to keep up, let alone advance. Modern motion control systems contribute significantly to intelligent industrial workflows, providing a high degree of flexibility, enabling convenient engineering and quick commissioning. The book "Fundamentals of Motion Control" addresses apprentices or students of engineering occupations and, moreover, everybody requiring basic information on motion control and related topics. Focusing on practicability, it explains the principles of motion control in a most comprehensible way. First, the book presents basic principles of electromagnetism and the functionality of motion control systems, followed by a closer look on the different types of electrical motors and feedback components. Further, the book explains operation principles of speed control units on the basis of the Sinamics family which has been designed for mechanical and industrial engineering applications. The following overview of the motion control system Simotion allows deeper insights into programming and commands. Thinking field-oriented, application-based and product-specific, the book concludes with a vivid example application for beginners, a glossary explaining important topic-related technical terms and, eventually, presenting a list of resources as a signpost for further studies.

The New Science of Mid-Life Health for a Leaner, Stronger Body and a Sharper Mind Wiley-Interscience

In his 1972 Janeway Lectures at Princeton, James Tobin, the 1981 Nobel Prize winner for economics, submitted a proposal for a levy on international currency transactions. The idea was not greeted

with enthusiasm, as the 1970s were a period of optimism and confidence in floating exchange rates. Yet, whenever currency crises erupted during the past decades, the proposal for a levy on international currency transactions would once again arise. In the 1990s, two additional facts have sharpened interest in the Tobin tax proposal. First is the growing volume of foreign exchange trading. Second, interest is coming not only from policymakers and experts concerned with the smooth functioning of financial markets. It is shared by those concerned with public financing of development--the fiscal crisis of the state as well as the growing need for international cooperation on problems such as the environment, poverty, peace and security. This work makes a systematic analysis of the proposal for a foreign exchange transactions levy. Its chapters examine the economic desirability of such a levy, its technical and political feasibility, its revenue potential, the possible uses of that revenue, and related administrative and institutional aspects.

In *Learning with Information Systems* the author takes the developing world as the context and through a series of case studies develops a commonly used systems analysis methodology. He demonstrates how this methodology can evolve and adapt as new ideas become prominent. Issues of sustainability of information systems, participation in systems design and user ownership of systems are all examined. This book does not attempt to be prescriptive for all contexts nor does it focus on any particular technology. It addresses the essential questions and promises practical approaches which will help in the avoidance of the worst forms of disaster associated with the planning of information systems for developing countries.
