Accounting Disrupted: How Digitalization

is changing Finance delivers a powerful analysis of the new technological forces buffeting the accounting profession and identifies key pathways to responding to the challenges. Al Bhimani, distinguished accountant, academic, and author, shows readers how established business fundamentals are being eclipsed and that accounting has not been spared. You'll learn: How the new realities of digitalization, including big data and AI, are affecting audit work and financial management practices How learning fast about and from more diverse data sources is essential to the new accounting environment Why accounting information must start to speak to what will take place rather than about financial activities that have occurred What finance must do in a world of changing risks, data growth, fast digitization, and increased regulation The author makes a compelling case that accounting now faces a crunch: it needs to reshape itself from the core because conventional financial analysis is proving too cumbersome and slow for executives in digitalized organizations. In a straightforward and illustrated style packed with case studies and practical examples, he shows readers how big data, blockchain, robotic process automation, and artificial intelligence, can help accountants adapt to new realities. Perfect for finance leaders in both the private and public sectors, Accounting Disrupted also belongs on the bookshelves of accounting students who wish to better prepare for the technological and professional environment in which they'll shortly find themselves.

MANAGEMENT AND COST ACCOUNTING
John Wiley & Sons

Management and cost accounting has been the basic toolbox in business administration for decades. Today it is an integral part of all curricula in business education and no student can afford not to be familiar with its basic concepts and instruments. At the same time, business in general, and management accounting in particular, is becoming more and more international. English clearly has evolved as the "lingua franca" of international business. Academics, students as well as practitioners exchange their views and ideas, discuss concepts and communicate with each other in English. This is certainly also true for cost

accounting and management accounting. Management Accounting is becoming increasingly international. "Management and Cost Accounting" is a new English language textbook covering concepts and instruments of cost and management accounting at an introductory level (Bachelor, but also suited for MBA courses due to strong focus on practical applications and cases). This textbook covers all topics that are relevant in management accounting in business organizations and that are typically covered in German and Central European Bachelor classes on cost accounting and management accounting. After an introduction to the topic, including major differences between the German approach and the purely Anglo-Saxon approach of management accounting, the book describes different cost terms and concepts applied in German cost accounting. The book is much more specific here compared to US-American standard textbooks. Based on different cost concepts, the topic of cost behavior is discussed, including the determination of cost functions. The heart of the book guides the reader through the general structure of a fully developed cost accounting system following the German and Central European standard: It starts with cost type accounting, moves on to cost center accounting and finally deals with cost unit accounting, assigning cost to goods and services offered in the market. The remaining parts of the book deal with decision making and how management and cost accounting data can support managers in this task. A comparison of absorption costing and variable costing introduces the reader to management decisions such as product portfolio and outsourcing decisions. Additionally, cost-volume-profit analysis

(break-even-analysis) is covered. The book closes with a comprehensive treatment of cost planning and variance analysis.

Business leaders rely on accounting data such as profit and calculated costs as a guide to whether they are making

money. Should they? Accounting was designed to report financial performance not model cash flow. Accruals can disconnect cash flow from the timing and extent to which it occurs. Statements of cash flow do not provide insight into what was bought and how efficiently it was used. Costs and profits are not absolute, they change based on the model you use to calculate them. To manage cash, you must manage what you buy and how effectively you use it. The largest expenditure for most companies is capacity; space, labor, materials, equipment, and technology. Unless you model and manage capacity effectively, you will not achieve the cash flow results you seek. This book introduces capacity management, describes cash flow dynamics, and offers ideas about how to manage both. After reading it, you be able to see, understand, and manage cash flow as never before.

Document from the year 2013 in the subject Business economics - General, grade: A, Atlantic International University, course: Business Administration, language: English, abstract: To make production effectively, costs like labor, overhead and material costs all together must be incurred. In fact in the production process every cost plays its role to make the production effective. Take an example of labor cost no production can take place without labor cost, however much it's the use of machines but the devices too are controlled by labor or humans. Cost reveals financial evaluation or assessments of resources prolonged to accomplish the goal like producing conducive service. In other words cost is the driver of all the income and expenditure statements. Costs appear everywhere be it in financial accounting, management accounting and in cost accounting governed by its principles. Therefore it should be noted that cost accounting enables the company and

the managers to have information about the period financial reports. But this doesn't mean that the released reports are the generally accepted ones by the Generally Accepted Accounting Principles (GAAP).
