study from Beijing that included 1292  
patients with in-hospital cardiac arrest  
from 12 hospitals found an overall  
survival of 9.1%, 6 which is much lower  
compared with a median survival of  
≈25% in the US. Second, it is possible  
that the poor survival in patients with  
COVID-19 reported in the study from  
Wuhan are in part, because the hospital  
was severely overwhelmed with patients  
with COVID-19 and struggled to provide  
ICU care and ventilatory support for  
many severely ill patients ...Survival
