The introduction of
Enterprise Identity
Management Systems
(EIdMS) in organizations
even beyond the purely
technological level is a
costly and challenging
endeavor. However, for
decision makers it seems
difficult to fully

understand the impacts
and opportunities arising
from the introduction of
EIdMS. This book explores
the relevant aspects for
an ex-ante evaluation of
EIdMS. Therefore it
examines this domain by
employing a qualitative
expert interview study to
better understand the
nature of EIdMS, as they
are situated between
security and productive IT
systems. To this regard,
the focus is put on the
general nature of EIdMS
projects and the
constructs being relevant
for analyzing such

projects in the decision
support phase. Based on
the derived constructs
and thematic topics from
the interviews, an
explanatory model for
EIdMS introductions is
derived and iteratively
improved and evaluated.
Finally, a possible
application use-case for
the creation of adequate
decision support tools is
presented.

Within global commerce,
services and management

play a vital role in the economy. Service systems are necessary for organizations, and a multi-disciplinary approach is ideal to establish full understanding of these systems. Best Practices and New Perspectives in Service Science and Management provides original research on all aspects of service science, service management, service engineering, and its supporting technology in order to administer cutting-edge knowledge

to encourage the improvement of services. This book is essential for researchers and practitioners in the fields of computer science, software management, and engineering. *Digital Transformation* Springer Security has been a human concern since the dawn of time. With the rise of the digital society, information security has rapidly grown to an area of serious study and ongoing research. While much research has focused on the technical

aspects of computer security, far less attention has been given to the management issues of information risk and the economic concerns facing firms and nations. *Managing Information Risk and the Economics of Security* provides leading edge thinking on the security issues facing managers, policy makers, and individuals. Many of the chapters of this volume were presented and debated at the 2008 Workshop on the Economics of Information Security (WEIS), hosted by

the Tuck School of Business at Dartmouth College. Sponsored by Tuck's Center for Digital Strategies and the Institute for Information Infrastructure Protection (I3P), the conference brought together over one hundred information security experts, researchers, academics, reporters, corporate executives, government officials, cyber crime investigators and prosecutors. The group represented the global nature of information security with participants

from China, Italy, Germany, Canada, Australia, Denmark, Japan, Sweden, Switzerland, the United Kingdom and the US. This volume would not be possible without the dedicated work Xia Zhao (of Dartmouth College and now the University of North Carolina, Greensboro) who acted as the technical editor.

Privacy Enhancing Technologies Springer Science & Business Media
Die Bedeutung der digitalen Infrastruktur, insbesondere von

Netzwerken, ist in den letzten zehn Jahren kontinuierlich gestiegen. Das gilt gleichermaßen für die IT-Sicherheit. Denn ohne sichere Netzwerke können Technologien wie Künstliche Intelligenz oder das Internet der Dinge weder betrieben noch weiterentwickelt werden. Dieses Buch liefert das Fundament, um die Konzeption von TCP/IP- und IoT-Netzwerken und ihre Sicherheit in einer zunehmend vernetzten Welt zu verstehen. Es vereint praxisrelevantes Know-how mit den

wissenschaftlichen Grundlagen und aktuellen Forschungsideen zu einem umfassenden Werk. Der Autor legt großen Wert darauf, die Grundlagen der Netzwerktechnik und der IT-Sicherheit verständlich und ausführlich darzustellen. Daneben greift er auch die folgenden Themen auf:

- Die Kryptographie, ihre historischen und modernen Verfahren sowie ihre Anwendung beispielsweise in VPNs (Virtual Private Networks)
- Die wichtigsten Angriffs-

und Verteidigungsmethoden für Netzwerke · Die Sicherheit des Internets der Dinge und sein Einsatz etwa in Smart Buildings und Industriesteueranlagen

Das Buch ist so konzipiert, dass Leserinnen und Leser mit einem eher praktischen Zugang zum Thema IT- und Netzwerksicherheit genauso profitieren wie jene mit einem mehr theoretischen Zugang. Durch zahlreiche Übungen – inklusive klassischer Klausuraufgaben – ist es

sowohl für die Lehre als auch für das Selbststudium bestens geeignet. Zusatzmaterial wie Vorlesungsunterlagen und selektierte Lösungen zu den Übungen stehen online zum Download zur Verfügung.

Electronic Voting and Democracy Springer

This book presents the most interesting talks given at ISSE 2008 – the forum for the interdisciplinary discussion of how to adequately secure electronic business processes. The topics

include: - Identity Management, Information Security Management - PKI-Solutions, Economics of IT-Security - Smart Tokens, e-ID-Cards, Infrastructur Solutions - Critical Information Infrastructure Protection, Data Protection, Legal Aspects. Adequate information security is one of the basic requirements of all electronic business processes. It is crucial for effective solutions that the possibilities offered by security technology can be integrated with the

commercial requirements of the applications. The reader may expect state-of-the-art: best papers of the Conference ISSE 2008. Smart and Sustainable Supply Chain and Logistics - Trends, Challenges, Methods and Best Practices Springer This book constitutes the thoroughly refereed proceedings of the industrial track of the 4th International Conference on Subject-Oriented Business Process Management, S-BPM ONE 2012, held in Vienna,

Austria, in April 2012. S-BPM as a discipline is characterized by a seamless approach toward the analysis, modeling, implementation, execution, and maintenance of business processes, with an explicit stakeholder focus. The 19 papers included were selected from the practically oriented submissions, and they have gone through the same rigorous peer-review process as their scientific counterparts. **The Political Economy**

of Private Security

Springer Science & Business Media
Provided with two columns in German & English Language / Zweispaltig in deutscher & englischer Sprache. BIG SEVEN STUDY about 7 open source Crypto-Messengers for Encryption at the Desktop: A contribution in the cryptographic-discussion - The two security researchers David Adams (Tokyo) and Ann-Kathrin Maier (Munich), who examined in their BIG SEVEN study seven well-

known encryption applications for e-mail and instant messaging out of the open source area, performed then a deeper IT-audit for the acquainted software solution GoldBug.sf.net. The audit took into account the essential criteria, study fields and methods on the basis of eight international IT-audit manuals and was carried out in 20 dimensions. It identifies Ten Trends in the Crypto-Messaging. Security researcher David Adams from Tokyo about the

published BIG SEVEN CRYPTO-study: "We looked at the seven major open source programs for encrypted online-communication and identified ten trends in the Crypto-Messaging area. One of the important trends is the feature, that the users should be able to define a so-called end-to-end encrypting password by themselves manually". The software "GoldBug - email client and instant messenger" here was ahead with excellent results and is not only

very trustworthy and compliant to international IT-audit manuals and safety standards, GoldBug also scores in comparison and in the evaluation of the single functions in much greater detail than the other comparable open source crypto messenger. Co-author of the study Ann-Kathrin Maier from Munich confirms: "We have then our Messenger study deepened with a detailed audit of the crypto-program GoldBug, which received excellent results for encrypted email and

secure online chat. By our code-reviews we can confirm the trustworthiness of this open source encryption in GoldBug." Numerous details have been analyzed by various methods, compared and also strategically evaluated by the two authors regarding the current encryption discussions. The comparatively studied applications include CryptoCat, GoldBug, OTR-XMPP clients such as Pidgin with the OTR-plugin, RetroShare and

Signal, Surespot and Tox.

 Warfare and Security "**
 LIT Verlag Münster
 Information technology in the workplace is vital to the management of workflow in the company; therefore, IT security is no longer considered a technical issue but a necessity of an entire corporation. The practice of IT security has rapidly expanded to an aspect of Corporate Governance so that the understanding of

the risks and prospects of IT security are being properly managed at an executive level. IT Security Governance Innovations: Theory and Research provides extraordinary research which highlights the main contributions and characteristics of existing approaches, standards, best practices, and new trends in IT Security Governance. With theoretical and practical perspectives, the book aims to address IT Security Governance implementation in

corporate organizations. This collection of works serves as a reference for CEOs and CIOs, security managers, systems specialists, computer science students, and much more.

IT-Security and Privacy

Routledge

Introduces aspects on security threats and their countermeasures in both fixed and wireless networks, advising on how countermeasures can provide secure communication infrastructures. Enables the reader to understand

the risks of inappropriate network security, what mechanisms and protocols can be deployed to counter these risks, and how these mechanisms and protocols work.

Proceedings of the Fourth International Congress of Actuaries

Springer

We live in a wired society, with computers containing and passing around vital information on both personal and public matters. Keeping this data safe is of paramount concern to all. Yet, not a

day seems able to pass without some new threat to our computers. Unfortunately, the march of technology has given us the benefits of computers and electronic tools, while also opening us to unforeseen dangers. Identity theft, electronic spying, and the like are now standard worries. In the effort to defend both personal privacy and crucial databases, computer security has become a key industry. A vast array of companies devoted to defending computers from hackers

and viruses have cropped up. Research and academic institutions devote a considerable amount of time and effort to the study of information systems and computer security. Anyone with access to a computer needs to be aware of the developing trends and growth of computer security. To that end, this book presents a comprehensive and carefully selected bibliography of the literature most relevant to understanding computer security. Following the

bibliography section, continued access is provided via author, title, and subject indexes. With such a format, this book serves as an important guide and reference tool in the defence of our computerised culture.

Towards the Knowledge Society

Routledge

This book constitutes the thoroughly refereed post-proceedings of the 4th International Workshop on Privacy Enhancing Technologies, PET 2004, held in Toronto, Canada in May 2004. The 20 revised

full papers presented were carefully selected from 68 submissions during two rounds of reviewing and improvement. Among the topics addressed are mix networks, mix firewalls, traffic analysis, sequence analysis, re-encryption, electromagnetic eavesdropping, anonymity of banknotes, IPv6, trustworthy environments, flow correlation attacks, anonymity measuring, mix cascades, trust negotiation, privacy policies, and

personalization. *Best Practices and New Perspectives in Service Science and Management* Springer Nature This book presents the proceedings of the International Conference on Computer Networks, Big Data and IoT (ICCBi-2018), held on December 19–20, 2018 in Madurai, India. In recent years, advances in information and communication technologies [ICT] have collectively aimed to streamline the evolution of internet applications. In

this context, increasing the ubiquity of emerging internet applications with an enhanced capability to communicate in a distributed environment has become a major need for existing networking models and applications. To achieve this, Internet of Things [IoT] models have been developed to facilitate a smart interconnection and information exchange among modern objects – which plays an essential role in every aspect of our lives. Due to their pervasive nature,

computer networks and IoT can easily connect and engage effectively with their network users. This vast network continuously generates data from heterogeneous devices, creating a need to utilize big data, which provides new and unprecedented opportunities to process these huge volumes of data. This International Conference on Computer Networks, Big Data, and Internet of Things [ICCBI] brings together state-of-the-art research work, which briefly describes advanced IoT applications

in the era of big data. As such, it offers valuable insights for researchers and scientists involved in developing next-generation, big-data-driven IoT applications to address the real-world challenges in building a smartly connected environment.

Security Protocols

Lulu.com

Crime science is precisely what it says it is: the application of science to the phenomenon of crime. This handbook, intended as a crime science manifesto, showcases the

scope of the crime science field and provides the reader with an understanding of the assumptions, aspirations and methods of crime science, as well as the variety of topics that fall within its purview. Crime science provides a distinctive approach to understanding and dealing with crime: one that is outcome-oriented, evidence-based and that crosses boundaries between disciplines. The central mission of crime science is to find new ways to cut crime and

increase security. Beginning by setting out the case for crime science, the editors examine the roots of crime science in environmental criminology and describe its key features. The book is then divided into two sections. The first section comprises chapters by disciplinary specialists about the contributions their sciences can make or have already made to crime science. Chapter 12 of this book is freely available as a downloadable Open

Access PDF under a Creative Commons Attribution-Non Commercial-No Derivatives 3.0 license. https://s3-us-west-2.amazonaws.com/tandfbis/rt-files/docs/Open+Access+Chapters/9780415826266_oachapter12.pdf
Proceedings Springer
This volume contains a selection of 128 papers presented in lectures during the international scientific symposium "Operations Research 2005" (OR 2005) held at the University of Bremen, September 7-9, 2005. This

international conference took place under the auspices of the German Operations Research Society (GOR). The symposium had about 600 participants from countries all over the world. It attracted academics and practitioners working in various fields of Operations Research and provided them with the most recent advances in Operations Research as well as related areas in Economics, Mathematics, and Computer Science including the special

interest streams Logistics and New Maritime Businesses. The program consisted of 3 plenary and 15 semi-plenary talks and about 400 contributed presentations selected by the program committee to be presented in 20 sections.

Proceedings of the Eighth International Network Conference (INC 2010)

Springer Science & Business Media
This book provides a coherent overview of the most important modelling-related security techniques available

today, and demonstrates how to combine them. Further, it describes an integrated set of systematic practices that can be used to achieve increased security for software from the outset, and combines practical ways of working with practical ways of distilling, managing, and making security knowledge operational. The book addresses three main topics: (1) security requirements engineering, including security risk management, major activities, asset

identification, security risk analysis and defining security requirements; (2) secure software system modelling, including modelling of context and protected assets, security risks, and decisions regarding security risk treatment using various modelling languages; and (3) secure system development, including effective approaches, pattern-driven development, and model-driven security. The primary target audience of this book is graduate students studying cyber

security, software engineering and system security engineering. The book will also benefit practitioners interested in learning about the need to consider the decisions behind secure software systems. Overall it offers the ideal basis for educating future generations of security experts.

Routledge Handbook of Crime Science John Wiley & Sons

These proceedings represent the work of researchers participating in the 15th European

Conference on Cyber Warfare and Security (ECCWS 2016) which is being hosted this year by the Universitat der Bundeswehr, Munich, Germany on the 7-8 July 2016. ECCWS is a recognised event on the International research conferences calendar and provides a valuable platform for individuals to present their research findings, display their work in progress and discuss conceptual and empirical advances in the area of Cyberwar and Cyber Security. It provides

an important opportunity for researchers and managers to come together with peers to share their experiences of using the varied and expanding range of Cyberwar and Cyber Security research available to them. With an initial submission of 110 abstracts, after the double blind, peer review process there are 37 Academic research papers and 11 PhD research papers, 1 Master's research paper, 2 Work In Progress papers and 2 non-academic papers published in these

Conference Proceedings. These papers come from many different countries including Austria, Belgium, Canada, Czech Republic, Finland, France, Germany, Greece, Hungary, Ireland, Kenya, Luxembourg, Netherlands, Norway, Portugal, Romania, Russia, Slovenia, South Africa, Sweden, Turkey, UK and USA. This is not only highlighting the international character of the conference, but is also promising very interesting discussions based on the broad treasure trove of

experience of our community and participants." *IT-Sicherheit für TCP/IP- und IoT-Netzwerke* Springer
Invasion of privacy and misuse of personal data are among the most obvious negative effects of today's information and communication technologies. Besides technical issues from a variety of fields, privacy legislation, depending on national activities and often lacking behind technical progress, plays an important role in

designing, implementing, and using privacy-enhancing systems. Taking into account technical aspects from IT security, this book presents in detail a formal task-based privacy model which can be used to technically enforce legal privacy requirements. Furthermore, the author specifies how the privacy model policy has been implemented together with other security policies in accordance with the Generalized Framework for Access Control (GFAC). This book

will appeal equally to R&D professionals and practitioners active in IT security and privacy, advanced students, and IT managers.

Innere Sicherheit im europäischen Vergleich
Springer

Electronic and internet voting has become increasingly widespread in recent years, but which countries are the leaders of the movement and who lags behind? Is the digital divide likely to present a permanent challenge to electronic democracy? What are the experiences

with regard to online voting, and what are the arguments for and against? *Electronic Voting and Democracy* examines these issues and the contexts in which they are played out, such as problems of legitimacy and the practical considerations that have driven some countries toward electronic voting faster than others.

Enterprise Identity Management Springer
Nature

This book constitutes the thoroughly refereed post-proceedings of the 12th

International Workshop on Security Protocols, April 2004. The book presents 21 revised full papers presented together with edited transcriptions of some of the discussions following the presentations. Among the topics addressed are authentication, anonymity, verification of cryptographic protocols, mobile ad-hoc network security, denial of service, SPKI, access control, timing attacks, API security, biometrics for security, and others.
