Assessment of Nonorthopedic Sports Injuries: A Sideline Reference Manual is a concise and user-friendly guide that will benefit both the clinician and the student. This handy manual will

help the clinician evaluate and treat nonorthopedic injuries on the sidelines at sporting events and can also be used as a study guide for students in the classroom. This well-organized reference guide contains algorithms, tables, and illustrations along with chapters that include an introduction and brief anatomy review, where applicable. The algorithms are designed to rule out potentially catastrophic injuries, such as cervical spine and head injuries. The algorithms will then guide the clinician through an evaluation specific to the injury, so that a differentiation can be made between the signs and symptoms indicative of serious conditions and those that are relatively benign. *Assessment of Nonorthopedic Sports Injuries: A Sideline Reference Manual* is a valuable book that will easily fit into a medical bag and have use as a crossover manual from the classroom to the playing field. *Orthopedic Physical Assessment (5Th Edition)* Springer Science & Business Media

The application of biomechanics plays an increasing role in modern orthopaedics; for example, correct decisions about the mode of treatment and choice of implants are just as important as operating precisely to reach a specific anatomical landmark. This book simplifies the core principles in orthopaedic biomechanics, giving readers the solid grounding they need to flourish in the specialty. Each topic is covered in a discrete, double-page spread, featuring concise text accompanied by illustrations or tables to give readers a solid understanding of the concepts discussed. This book serves as a definitive guide to diagnosing shoulder conditions for all levels of orthopaedic surgeon with an interest in shoulder pathology, and for junior surgeons in training. It comes at a time when the knowledge regarding shoulder conditions has vastly improved, with the shoulder sub-speciality growing at a rapid pace in terms of practitioner numbers, procedures and evidence-base. However, with the multitude of special tests for shoulder conditions, the clinician faces a variety of sensitivities and specificities of the respective tests. It is unclear, in most circumstances, which single test is the best and growing evidence confirms that a set of tests is superior for diagnosing shoulder conditions. This forms the basis of cluster testing, which is the key concept for the title and content of this book. In many common shoulder diagnoses the preference for clusters has been reflected in both experience and clinical evidence, but for conditions where evidence for clusters is less clear, a consensus-based approach is utilised by the authors of this key resource for diagnosing shoulder conditions.
