Over the past two decades there has been a marked change in global age demographics, with the number of over-60s increasing by 82% and the number of centenarians by 715%. This new-found longevity is testament to the success of recent advances in medicine, but poses significant challenges to multiple areas of health care concerning older patients. Building upon its predecessor's reputation as the definitive resource on the subject, this new edition of the Oxford Textbook of Geriatric Medicine offers a comprehensive and multinational examination of the field. Fully revised to reflect the current state of geriatric medicine, it examines the medical and scientific basis of clinical issues, as well as the ethical, legal, and socio-economic concerns for healthcare policy and systems. Over 170 chapters are broken up into 16 key sections, covering topics ranging from policy and key concepts through to infection, cancer, palliative medicine, and healthy ageing. New material includes focus on the evolving concepts of malnutrition, sarcopenia, frailty, and related geriatric syndromes and integration of geriatric principles from public health, primary and specialized care, and transitional stages from home to emergency, medicine and surgery, rehabilitation, and long term care. The Oxford Textbook of Geriatric Medicine brings together specialists from across the globe to provide every physician involved in the care of older patients with a comprehensive resource on all the clinical problems they are likely to encounter, as well as on related psychological, philosophical, and social issues.

Essential Geriatrics, Third Edition Springer Science & Business Media

The Neuroscience of Dementia brings together different fields of dementia research into a single book, covering a wide range of subjects, including Alzheimer's disease, Lewy body dementia, mixed dementia, vascular dementia, physical activity, risk factors, mortality, biomarkers, SPECT, CT, MRI, questionnaires, nutrition, sleep, delirium, hearing loss, agitation, aggression, delusions, anxiety, depression, hallucinations, psychosis, senile plaques, tau and amyloid-beta, neuroinflammation, molecular biology, and more. This foundational, comprehensive book compiles the latest understanding on all forms of dementia and their common features in a single source. It is an invaluable resource for neuroscientists, neurologists, and anyone in the field. Offers comprehensive coverage of a broad range of topics related to dementia Contains in each chapter an abstract, key facts, mini dictionary of terms, and summary points to aid in understanding Provides unique sections on specific subareas, intellectual

components, and knowledge-based niches that will help readers navigate key areas for research and further clinical recommendations Features preclinical and clinical studies to help researchers map out key areas for research and further clinical recommendations Serves as a "one-stop" source for everything you need to know about dementia

In an ageing population, geriatric medicine has become central to general practice, and to emergency and general internal medicine in the hospital setting. Diseases are more common in the older person, and can be particularly difficult to assess and to treat effectively in a field that has limited evidence, yet makes up a substantial proportion of the work of most clinicians. Fully updated, this second edition of the Oxford Handbook of Geriatric Medicine includes all the information required to deliver effective geriatric care. Guidance is given on a range of key treatment areas, indicating where practice differs from that of younger adults or is ill informed by evidence, where dangers lurk for the inexperienced clinician, and on the many ethical and clinical dilemmas common in geriatric practice. This accessible handbook is essential reading for all junior doctors and specialist trainees in geriatric medicine and general internal medicine, and for all medical and nursing staff who manage older people.

Developing appropriate responses to an ageing population is recognized by policy makers throughout the developed world as a top priority, as is the vital contribution made by family caregivers. However, cultural, demographic and organizational differences between countries have encouraged diverse patterns of response to this common challenge. This book provides a systematic cross-cultural analysis of contemporary patterns and future trends in all major countries of the European Union. Additional interest is provided by including Poland emerging from the post-Communist block as the country at the forefront for joining the European Union. The book should be useful to European policy makers and academies involved in studying the health and social care needs of older people and the capacity, contribution and needs of family caregivers who provide care to older people. The book is also relevant for policy makers and researchers in other countries, mostly in North America and Australia who wish to study European approaches to supporting older people and family caregivers.

Praise for the first edition: "This is an excellent teaching guide and resource manual for instructors, gerontological nursing students, and practicing nurses and social workers who wish to learn more about geriatric concerns and care. It will be kept by nursing students long after they graduate as a guide to resources that will be valuable throughout their nursing careers. As a home care nurse working mainly with the geriatric community, I found the resources helpful in my practice. As an instructor, I found the book to be a very useful guide for teaching geriatrics." Score: 90, 4 Stars —Doody's Medical Reviews "[This] is a unique volume that effectively addresses the lack of gerontology case studies for use with undergraduate nursing students. Case studies are a pedagogically powerful approach to active learning that offer opportunities to apply content to clinical practice." —The Gerontologist "The case narrative approach of this book promotes active learning that is more meaningful to students (and practicing nurses) and more likely to increase the transfer of evidence into practice. An excellent resource for faculty (staff

educators) to facilitate critical learning skills." —Liz Capezuti, PhD, RN, FAAN Dr. John W. Rowe Professor in Successful Aging Co-Director, Hartford Institute for Geriatric Nursing New York University College of Nursing Vivid case examples help guide nurses in developing appropriate interventions that include complementary and alternative health therapies and provide a basis for evaluating outcomes. Exercises interspersed throughout each case study include numerous open-ended and multiple-choice questions to facilitate learning and critical thinking. The text is unique in that some of the presented cases focus on psychosocial issues such as gambling addiction, hoarding behavior, emergency preparedness, and long-distance caregiving. Cases also depict geriatric clients who are living healthy, productive lives to counter myths and negative attitudes about older adults. Scenarios demonstrating ethical dilemmas prepare students to appropriately respond to "gray area" situations. The text is geared for AACN and NLN accreditation and is organized according to the needs of actual clinical settings. With cases that take place in the home and community or within primary, acute, and long-term care facilities, this book will be useful for courses specific to gerontology nursing or across any nursing curriculum. New to the Second Edition: A completely new section of Aging Issues Affecting the Family New cases addressing health care disparities, aging in place, and prevention of catheter-associated urinary tract infection Additional contemporary case studies The addition of Quality for Safety in Nursing Education (QSEN) initiatives A greater focus on prioritization and delegation of client's needs infused throughout exercises

Essentials of Gerontological Nursing Hong Kong University Press
The number of older people in our society is increasing rapidly and as they age, the demand for safe, effective care is growing. This book offers readers the knowledge and skill to provide all aspects of care. Caring for the Older Person is written in six sections, covering the fundamental needs of an older person: Assistance with personal cleansing Assistance with movement Assistance to maintain nutrition and fluid intake Assistance with toilet needs Assistance with the need for observation and monitoring Care of the person immediately following death Each section starts with an explanation and includes care procedures in a step-by-step format. Written by two experienced nurses, the book is systematic and evidence-based, using up-to-date knowledge and government policy. It is intended to be a practical aid to improve care for the older person, whether in hospital, care home or at home and to give the reader the confidence that the care they provide is safe and effective. Caring for the Older Person is an essential resource for health care professionals, trainees, care assistants, or paid carers, whose work involves caring for an older person; or a lay person - someone who needs to acquire skill and confidence to care for an older friend, neighbour or relative.

Third Geriatric Conference 1958 Springer Publishing Company
Demographic trends confirm what clinicians already know - they are spending increasing amounts of time dealing with older people. This new ABC provides an introduction to the new and increasing challenges of treating older patients in a variety of settings. ABC of Geriatric Medicine provides an overview of geriatric medicine in practice. Chapters are written by experts, and are based on the specialty geriatric medicine curriculum in the UK. ABC of Geriatric Medicine is a highly illustrated, informative, and practical source of knowledge, with links to further information and resources. It is an essential guide where management of the ageing population is a major health issue - for hospital and family doctors, students, nurses and other members of the multi-disciplinary team.
