Targeting is the primary method for securing strategic objectives in an armed conflict. Failure to comply with the law of targeting jeopardizes the achievement of those aims. It is therefore

essential that all those involved in or studying issues surrounding targeting have an accurate and complete understanding of this area of law. This book offers the definitive and comprehensive statement of all aspects of the law of targeting. It is a 'one-stop shop' that answers all relevant questions in depth. It has been written

in an open, accessible yet comprehensive style, and addresses both matters of established law and issues of topical controversy. The text explains the meanings of such terms as 'civilian', 'combatant', and 'military objective'. Chapters are devoted to the core targeting principles of distinction, discrimination, and proportionality, as

well as to the relationship between targeting and the protection of the environment and of objects and persons entitled to special protection. New technologies are also covered, with chapters looking at attacks using unmanned platforms and a discussion of the issues arising from cyber warfare. The book also examines recent controversies and perceived ambiguities in the rules governing targeting, including the use of human shields, the

level of care required in a bombing campaign, and the difficulties involved in determining whether someone is directly participating in hostilities. This book will be invaluable to all working in this contentious area of law.

While American national security policy has grown more interventionist since the Cold War, Washington has also hoped to shape the world on the cheap. Misled by the stunning

success against Iraq in 1991, administrations of both parties have pursued ambitious aims with limited force, committing the country's military frequently yet often hesitantly, with inconsistent justification. These ventures have produced strategic confusion, unplanned entanglements, and indecisive results. This collection of essays by Richard K. Betts, a leading international politics scholar, investigates the use of American force since the end of the Cold

War, suggesting guidelines for making it more selective and successful. Betts brings his extensive knowledge of twentieth century American diplomatic and military history to bear on the full range of theory and practice in national security, surveying the Cold War roots of recent initiatives and arguing that U.S. policy has always been more unilateral than liberal theorists claim. He exposes mistakes made by humanitarian interventions and peace

operations; reviews the issues raised by terrorism and the use of modern nuclear, biological, and cyber weapons; evaluates the case for preventive war, which almost always proves wrong; weighs the lessons learned from campaigns in Iraq, Afghanistan, and Vietnam; assesses the rise of China and the resurgence of Russia; quells concerns about civil-military relations; exposes anomalies within recent defense budgets; and confronts the practical barriers to effective

strategy. Betts ultimately argues for greater caution and restraint, while encouraging more decisive action when force is required, and he recommends a more dispassionate assessment of national security interests, even in the face of global instability and unfamiliar threats. In these “thought-provoking visions of the future” (The Wall Street Journal), Joe Quirk and Patri Friedman of the Seasteading Institute explain how ocean cities can solve many of our environmental, technological, and civic

problems, and introduce the visionaries and pioneers who are now making seasteading a reality. Our planet has been suffering from serious environmental problems and their social and political consequences. But imagine a vast new source of sustainable and renewable energy that would also bring more equitable economies. A previously untapped source of farming that could produce significant new sources of nutrition. Future societies where

people could choose the communities they want to live in, free from the restrictions of conventional citizenship. This extraordinary vision of our near future as imagined in *Seasteading* attracted the powerful support of Silicon Valley's Peter Thiel—and it may be drawing close to reality. Facing growing environmental threats, French Polynesia has already signed on to build some of the world's first seasteads. Joe Quirk and Patri Friedman show us how cities built on floating

platforms in the ocean will work, and they profile some of the visionaries who are implementing basic concepts of seasteading today. An entrepreneur's dream, these floating cities will become laboratories for innovation and creativity. *Seasteading* "offers hope for a future when life on land has grown grim" (Kirkus Reviews), proving the adage that yesterday's science fiction is tomorrow's science fact. *Theory and Practice*

In *Constitutional Deliberation in Congress* J. Mitchell Pickerill analyzes the impact of the Supreme Court's constitutional decisions on Congressional debates and statutory language. Based on a thorough examination of how Congress responds to key Court rulings and strategizes in anticipation of them, Pickerill argues that judicial review—or the possibility of it—encourages Congressional attention to constitutional issues. Revealing critical aspects

of how laws are made, revised, and refined within the separated system of government of the United States, he makes an important contribution to “constitutionalism outside the courts” debates. Pickerill combines legislative histories, extensive empirical findings, and interviews with current and former members of Congress, congressional staff, and others. He examines data related to all of the federal legislation struck down by the Supreme

Court from the beginning of the Warren Court in 1953 through the 1996–97 term of the Rehnquist Court. By looking at the legislative histories of Congressional acts that invoked the Commerce Clause and presented Tenth Amendment conflicts—such as the Child Labor Act (1916), the Civil Rights Act (1965), the Gun-Free School Zones Act (1990), and the Brady Bill (1994)—Pickerill illuminates how Congressional

deliberation over newly proposed legislation is shaped by the possibility of judicial review. The Court’s invalidation of the Gun-Free School Zones Act in its 1995 ruling *United States v. Lopez* signaled an increased judicial activism regarding issues of federalism. Pickerill examines that case and compares congressional debate over constitutional issues in key pieces of legislation that preceded and followed it: the Violence Against Women Act of 1994 and the Hate Crimes

Prevention Act of 1997. He shows that Congressional attention to federalism increased in the 1990s along with the Court's greater scrutiny.

This new volume provides a comprehensive analysis of both the theory and practice of operational warfare at sea. The book

is unique in using diverse sources and examples to present a comprehensive topical description and analysis of the key components of operational warfare at sea today. It opens with a survey of the emergence of operational warfare at sea since the end of the Napoleonic Wars, going on to describe and analyze the objectives of naval warfare at the operational level and methods of employment of naval forces for accomplishing these objectives. The book explains the

specifics of operational functions in a maritime theatre, discusses the personality traits and professional education required for successful naval operational commanders, and explores naval operational command and control in both peacetime and war, closing with predictions for the future of operational warfare at sea. This book serves as a primer of how to plan, prepare and execute major naval operations and campaigns for naval commanders and their

staffs, but will also be of interest to advanced students of naval history, strategic studies and military history in general.

Andrew Marshall is a Pentagon legend. For more than four decades he has served as Director of the Office of Net Assessment, the Pentagon's internal think tank, under twelve defense secretaries and eight administrations. Yet Marshall has been on the cutting edge of strategic thinking even longer than that. At the RAND Corporation during its golden age in the 1950s and early 1960s, Marshall helped formulate bedrock concepts of US nuclear strategy that endure to

this day; later, at the Pentagon, he pioneered the development of "net assessment" -- a new analytic framework for understanding the long-term military competition between the United States and the Soviet Union. Following the Cold War, Marshall successfully used net assessment to anticipate emerging disruptive shifts in military affairs, including the revolution in precision warfare and the rise of China as a major strategic rival of the United States. In *The Last Warrior*,

Andrew Krepinevich and Barry Watts -- both former members of Marshall's staff -- trace Marshall's intellectual development from his upbringing in Detroit during the Great Depression to his decades in Washington as an influential behind-the-scenes advisor on American defense strategy. The result is a unique insider's perspective on the changes in US strategy from the dawn of the Cold War to the present day. Covering some of the most pivotal episodes of

the last half-century and peopled with some of the era's most influential figures, *The Last Warrior* tells Marshall's story for the first time, in the process providing an unparalleled history of the evolution of the American defense establishment. *A Process for Exploring, Discovering, and Developing Vocal Potential* Columbia University Press

Smallholder farmers and pastoralists fulfil an

invaluable yet undervalued role in conserving biodiversity. They act as guardians of locally adapted livestock breeds that can make use of even marginal environments under tough climatic conditions and therefore are a crucial resource for food security. But in addition, by sustaining animals on natural vegetation and as part of local ecosystems, these communities also make a significant contribution to the conservation of wild biodiversity and of

cultural landscapes. This publication provides a glimpse into the often intricate knowledge systems that pastoralists and smallholder farmers have developed for the management of their breeds in specific production systems and it also describes the multitude of threats and challenges these often marginalized communities have to cope with. *United States Government Publications* OUP Oxford
Extension of presidential leadership in foreign affairs to war powers has

destabilized our constitutional order and deranged our foreign policy. Stephen M. Griffin shows unexpected connections between the imperial presidency and constitutional crises, and argues for accountability by restoring Congress to a meaningful role in decisions for war.

Whilst maritime studies tend to reflect the dominance of large navies, history shows how

relatively small naval forces can have a disproportionately large impact on global events. From Confederate commerce raiders in the nineteenth century, to Somali pirates today, even the most minor of maritime forces can become a key player on a global stage. Examining a broad range of examples, this volume addresses the roles and activities of small navies in the past and the present at the national, regional and international level. In particular, it focusses on

the different ways in which such forces have identified and addressed national and international security challenges and the way in which they interact with other navies and security agencies. In addition the collection also investigates the relationship of such navies with non-governmental organisations, institutions and bodies in pursuit of broader maritime goals, be they political, financial or environmental. Adopting an interdisciplinary approach

drawing on the best new research from the fields of international relations, security studies, strategic studies and maritime history, the book examines the diversity of experience amongst different smaller navies and also establishes areas of similarity. Divided into two sections, part one begins with a number of chapters that are theoretical in nature, whilst part two provides case studies that offer a more regional focus, including analysis of the challenges facing

contemporary navies and historical case studies designed to reveal the experience of small navies over time. By adopting an approach that combines historical considerations with analysis of current events, the collection offers a unique perspective on the role that small navies have played in wider nautical affairs and their continued impact upon global maritime strategies.

exciting new take on the relationship between law and power. The 1856 Declaration of Paris marks the precise moment when international law became universal, and was an aggressive and successful British move to end privateering forever – then the United States' main weapon in case of war with Britain.

The lungs and kidneys help to balance the pH of the body, thus its critical to keep these organs healthy so they can keep up with ridding the body of excess acid; Like any other organ in the body, the kidney thrives off three key minerals which are chloride, magnesium and potassium. These key

minerals help the kidneys to function at their best and unfortunately, we get little or nothing of these minerals from the modern diet. Thankfully, the Alkaline Diet helps you to bring your body back to balance. This diet promotes alkalinity in the body and, incorporating these foods into your diet, it will help your kidneys function optimally and also rid the body of excess acid.
