Environmental Justice Small Grants Program Hassell Street Press
 Simple, science-based tools to stop procrastination Even with overflowing inboxes, thousands of unread notifications, and unmet deadlines, most people still can't manage to take control of their time and stop procrastinating. *The End of Procrastination* tackles this ubiquitous issue head on, helping you stop putting off work and reclaim your time. Author Petr Ludwig shows that ending procrastination is more than a wise time management strategy—it's essential to developing a sense of purpose and leading a happier more fulfilled life. The keys to overcoming procrastination are simple. With eight clear, approachable tools—from quick daily worksheets to shift your perspective to to-do lists that actually help you get things done—*The End of Procrastination* provides everything you need to change the way you manage your time and live your life. Based on the latest research, *The End of Procrastination* synthesizes over one hundred scientific studies to create a program that is based on the way our brains actually work. By understanding exactly why procrastination happens and how our brains respond to motivation and self-discipline, the book provides readers with the knowledge to conquer procrastination on an everyday basis.

Get up to speed quickly on the world's fastest growing financial sector The Islamic Finance Handbook: A Practitioner's Guide to the Global Markets is the definitive report for the Islamic finance industry. Written by the industry's leading practitioners, the book provides a country-by-country breakdown of the current state of the Islamic market, including league tables by region and by country. Relevant case studies are used throughout to illustrate the practical aspect of the information presented. Organized for easy navigation, each chapter features sub-sections that allow instant comparison between countries in a specific area of interest. The Islamic finance industry is the world's fastest growing sector, valued at over U.S. \$1.3 trillion by the UK Islamic Finance secretariat, with an annual growth of 24% for the past five years. To compete globally, practitioners need a true understanding of key markets within the industry. The Islamic Finance Handbook paints a clear picture of where each country stands in its development and role within the market, and provides a straightforward comparison between markets. Features include: Current macroeconomic and microeconomic conditions Regulatory and political situations Recent transactions, key participants, and the investor climate Real-world cases, as opposed to speculative scenarios The book places a clear focus on current conditions versus past performance, and on practical applications versus theoretical speculation. Each chapter is authored by a leading practitioner from within each country, allowing a true glimpse inside the day-to-day workings of the Islamic markets. For finance professionals who need to get up to speed on this rapidly growing sector, The Islamic Finance Handbook: A Practitioner's Guide to the Global Markets is a clear, comprehensive guide.

An Education in Facebook? examines and critiques the role of Facebook in the evolving landscape of higher education. At times a mandated part of classroom use, at others an informal network for students, Facebook has become an inevitable component of college life, acting alternately as an advertising, recruitment and learning tool. But what happens when educators use a corporate product, which exists outside of the control of universities, to educate students? An Education in Facebook? provides a broad

discussion of the issues educators are already facing on college campuses worldwide, particularly in areas such as privacy, copyright and social media etiquette. By examining current uses of Facebook in university settings, this book offers both a thorough analytical critique as well as practical advice for educators and administrators looking to find ways to thoughtfully integrate Facebook and other digital communication tools into their classrooms and campuses.

Introduction to the Educational Sciences Walter de Gruyter GmbH & Co KG

This first book-length collection on Levinas and education gathers new texts written especially for this volume by an international group of scholars well known for their work in philosophy, educational theory, and on Levinas. It provides an introduction to some of Levinas's major themes of ethics, justice, hope, hospitality, forgiveness and more, as its contributing authors address some fundamental educational issues such as: what it means to be a teacher; what it means to learn from a teacher; the role of language in the curriculum; literature, ethics, and education; moral education and human relations in schools; ethics of responsibility and philosophical-pedagogical discourse; educational hospitality and interculturalism; unconditional responsibility and education; educating for participatory democratic citizenship; the pedagogy of peace; logic, rationality, and ethics; connecting teaching to spirituality. Levinas always insisted that his aim was not to provide "a program," and accordingly, it is not the intent of the authors to look in Levinas's texts for a set of guidelines, rules, or precepts to be applied to education. Rather, this study invites educators, and researchers in philosophy and philosophy of education, to a thoughtful and critical reading of Levinas, and to engage with his unique style of analysis and questioning as they uncover with these authors the necessity and the possibility of thinking education anew in terms of ethics, justice, responsibility, hope and faith.

Qui est qui en France Lotus Press (WI)

Bringing together the work of international experts in the field, and two interviews with Derrida himself, this book provides a key to the reflections that Derrida's work has prompted on all aspects of educational studies. The contributors address fundamental educational issues from a Derridian perspective to demonstrate the relevance of his work in contemporary, multicultural societies.

The Ecological Approach To Visual Perception Springer Science & Business Media

This volume rethinks the work of Jacques Ellul (1912-1994) on the centenary of his birth, by presenting an overview of the current debates based on Ellul's insights. As one of the most significant twentieth-century thinkers about technology, Ellul was among the first thinkers to realize the importance of topics such as globalization, terrorism, communication technologies and ecology, and study them from a technological perspective. The book is divided into three sections. The first discusses Ellul's diagnosis of modern society, and addresses the reception of his work on the technological society, the notion of efficiency, the process of symbolization/de-symbolization, and ecology. The second analyzes communicational and cultural problems, as well as threats and trends in early twenty-first century societies. Many of the issues Ellul saw as crucial – such as energy, propaganda, applied life sciences and communication – continue to be so. In fact they have grown exponentially, on a global scale, producing new forms of risk. Essays in the final section examine the duality

of reason and revelation. They pursue an understanding of Ellul in terms of the depth of experience and the traditions of human knowledge, which is to say, on the one hand, the experience of the human being as contained in the rationalist, sociological and philosophical traditions. On the other hand there are the transcendent roots of human existence, as well as "revealed knowledge," in the mystical and religious traditions. The meeting of these two traditions enables us to look at Ellul's work as a whole, but above all it opens up a space for examining religious life in the technological society.

Just Listen to Your Body and Eat Hodder Education

Responding to Jacques Derrida's vision for what a 'new' humanities should strive toward, Peter Trifonas and Michael Peters gather together in a single volume original essays by major scholars in the humanities today. Using Derrida's seven programmatic theses as a springboard, the contributors aim to reimagine, as Derrida did, the tasks for the new humanities in such areas as history of literature, history of democracy, history of profession, idea of sovereignty, and history of man. Deconstructing Derrida engages Jacques Derrida's polemic on the future of the humanities to come and expands on the notion of what is proper to the humanities in the current age of globalism and change.

The End of Procrastination Bernan Press(PA)

This is a book about how we see: the environment around us (its surfaces, their layout, and their colors and textures); where we are in the environment; whether or not we are moving and, if we are, where we are going; what things are good for; how to do things (to thread a needle or drive an automobile); or why things look as they do. The basic assumption is that vision depends on the eye which is connected to the brain. The author suggests that natural vision depends on the eyes in the head on a body supported by the ground, the brain being only the central organ of a complete visual system. When no constraints are put on the visual system, people look around, walk up to something interesting and move around it so as to see it from all sides, and go from one vista to another. That is natural vision -- and what this book is about.

The Curriculum of the Future John Wiley & Sons

There is a tremendous interest among researchers for the development of virtual, augmented reality and games technologies due to their widespread applications in medicine and healthcare. To date the major applications of these technologies include medical simulation, telemedicine, medical and healthcare training, pain control, visualisation aid for surgery, rehabilitation in cases such as stroke, phobia and trauma therapies. Many recent studies have identified the benefits of using Virtual Reality, Augmented Reality or serious games in a

variety of medical applications. This research volume on Virtual, Augmented Reality and Serious Games for Healthcare 1 offers an insightful introduction to the theories, development and applications of virtual, augmented reality and digital games technologies in medical and clinical settings and healthcare in general. It is divided into six sections: section one presents a selection of applications in medical education and healthcare management; Section two relates to the nursing training, health literacy and healthy behaviour; Section three presents the applications of Virtual Reality in neuropsychology; Section four includes a number of applications in motor rehabilitation; Section five aimed at therapeutic games for various diseases; and the final section presents the applications of Virtual Reality in healing and restoration. This book is directed to the healthcare professionals, scientists, researchers, professors and the students who wish to explore the applications of virtual, augmented reality and serious games in healthcare further.

Derrida & Education Routledge

In this important book the author looks back on the 'knowledge question'. What knowledge gets selected to be validated as school knowledge or as part of the school curriculum, and why is it selected? Looking forward, Young discusses how most developed countries have high levels of participation in post-compulsory education, but still use curricula designed for a time when only the elite pursued further education. He argues the need to rethink post-16 education to shift focus onto vocational education, school-work issues and lifelong learning.

Three Lectures on Post-industrial Society Princeton University Press

Recently there has been a growing interest not only in existentialism, but also in existential questions, as well as key figures in existential thinking. Yet despite this renewed interest, a systematic reconsideration of Kierkegaard's existential approach is missing. This anthology is the first in a series of three that will attempt to fill this lacuna. The 13 chapters of the first anthology deal with various aspects of Kierkegaard's existential approach. Its reception will be examined in the works of influential philosophers such as Heidegger, Gadamer, and Habermas, as well as in lesser known philosophers from the interwar period, such as Jean Wahl, Lev Shestov, and Benjamin Fondane. Other chapters reconsider central notions, such as "anxiety", "existence", "imagination", and "despair". Finally, some chapters deal with Kierkegaard's relevance for central issues in contemporary philosophy, including "naturalism", "self-constitution", and "bioethics". This book is of relevance not only to researchers working in Kierkegaard Studies, but to anyone with an interest in existentialism and existential thinking.
