Newly streamlined and focused on quick-access, easy-to-digest content, Mulholland and Greenfield's Surgery: Scientific Principles & Practice, 7th Edition, remains an invaluable resource for today's residents and practicing surgeons. This gold standard text balances scientific advances with clinical practice, reflecting rapid changes, new technologies, and innovative techniques in today's surgical care. New lead editor Dr. Justin Dimick and a team of expert editors and contributing authors bring a fresh perspective and vision to this classic reference.

[A New Laser Treatment of Choroidal Melanoma](#) Lippincott Williams & Wilkins

Written by world-class experts in clinical cancer therapeutics, Physicians' Cancer Chemotherapy Drug Manual 2020 provides a complete, easy-to-use catalog of over 100 drugs and commonly used drug regimens--both on- and off-label--for the treatment of all the major cancers.

The focus of Berek and Hacker's for four editions has been on the application of basic and clinical science to the clinical practice of gynecologic oncology. That approach has been successful and the book has been well received. The Fifth Edition follows the format of the previous editions, with the addition of color. We will also include a fully searchable companion Website that includes an image bank.

Stem cell research is one of the fascinating areas of contemporary biology, but, as with many expanding fields of scientific inquiry, research on stem cells raises scientific questions as rapidly as it generates discoveries. Research on stem cell treatment continues to advance knowledge about how an organism develops from a single cell and how healthy cells replace damaged cells in adult organisms. The most important potential application of human stem cells is the generation of cells and tissues that could be used for cell-based therapies, especially oncology. The Faculty of Medicine, Universitas Sumatera Utara, collaborated with the center of excellence and innovation (Pusat Unggulan Inovasi /PUI). The Stem Cell center of the Universitas Sumatera Utara (USU) organized an International Conference. The International Stem Cell and Oncology Conference (ISCOC) 2017 was a comprehensive academic conference in the field of stem cell and oncology research and also tropical medicine and related scientific topics. We expect Stem Cell Oncology will benefit academics and practitioners in the field of health sciences in Indonesia. This is an Open Access ebook, and can be found on www.taylorfrancis.com.

Scientific Principles and Practice Springer

A full-color, case-based review of the essentials of pathophysiology--covering all major organs and systems The goal of this trusted text is to introduce you to clinical medicine by reviewing the pathophysiologic basis of 120 diseases (and associated signs and symptoms) commonly encountered in medical practice. The authors, all experts in their respective fields, have provided a concise review of relevant normal structure and function of each body system, followed by a description of the pathophysiologic mechanisms that underlie several common diseases related to that system. Each chapter of Pathophysiology of Disease concludes with a collection of case studies and questions designed to test your understanding of the pathophysiology of each clinical entity discussed. These case studies allow you to apply your knowledge to specific clinical situations. Detailed answers to each case study question are provided at the end of the book. This unique interweaving of physiological and pathological concepts will put you on the path toward thinking about signs and symptoms in terms of their pathophysiologic basis, giving you an understanding of the "why" behind illness and treatment. Features 120 case studies (9 new) provide an opportunity for you to test your understanding of the pathophysiology of each clinical entity discussed Checkpoint questions provide review and appear in every chapter Updates and revisions throughout this new edition reflect the latest research and developments Numerous tables and diagrams encapsulate important information Updated references for each chapter topic Pathophysiology of Disease is a true must-have resource for medical students preparing for the USMLE Step 1 exam, as well as students engaged in their clerkship studies. House officers, nurses, nurse practitioners, physicians' assistants, and allied health practitioners will find its concise presentation and broad scope a great help in facilitating their understanding of common disease entities.

Cancer Medicine Lippincott Williams & Wilkins

This practical, user-friendly guidebook will allow the clinician to search under disease site for the hereditary cancer syndromes relevant for his/her patient's cancer. For example, a gynecologist oncologist whose patient has ovarian cancer can turn to the Ovary chapter and quickly read a summary of all of the hereditary cancer syndromes that include ovarian cancer. She can learn the questions she should be asking when expanding that patient's personal and family history, which genes are most relevant, whether to refer that patient on for genetic counseling and testing, and how to manage that patient long-term if the patient is mutation positive or negative. The same holds true for the practicing oncologist, surgeon, urologist, endocrinologist, gynecologist, primary care physician, physician's assistant, advanced practice nurse and any other clinician seeing a patient who has had cancer. This guidebook also contains an overview article on genetic counseling and testing and several in depth articles on issues that are up and coming in the field of hereditary cancer.

Molecular Biology of Prostate Cancer Lippincott Williams & Wilkins

Holland Frei Cancer Medicine serves as a quick reference to current information on an extensive list of cancers, including breast, lung, thyroid, colorectal, ovarian, prostate, and gastric cancer, to name but a few. Presented as an accessible pocket-sized handbook, the chapters are organized in an outline format, offering only the most essential information on the etiology, staging (including TNM staging) and treatment for each cancer type. Individual chapters are devoted to the molecular biology of cancer, cancer prevention, cancer screening, the mechanisms of chemotherapy, and diagnostic imaging in cancer. Additionally, each chapter lists all the major phase III clinical trials, and therefore, serves as an excellent reference of the major randomized controlled trials for each cancer reported to date. Specific chapters are also dedicated to the discussion of oncologic emergencies, pain and palliation, and prescription complications. At the conclusion of the book, a glossary of oncologic terms and chemotherapeutic drug programs, a table of common cancer incidences, and an overview of the mechanisms, common uses, and related toxicities of various anti-cancer agents are featured. In addition, performance status tables, mathematical formulas and a listing of common biomedical / cancer web sites are highlighted.

Selected from the world's leading comprehensive cancer textbook, this tightly focused resource provides you with the practical, cutting-edge information you need to provide the best cancer care to each patient. Lymphomas and Leukemias: From Cancer: Principles & Practice of Oncology, 10th Edition, offers a complete and balanced view of this rapidly changing field, meeting the needs of oncology/hematology practitioners, fellows, and others who need an in-depth understanding of leukemias and lymphomas. The print reference gives you the solid, dependable guidance you have come to expect from this outstanding title, and the Inkling version features new quarterly updates written by a team of experts selected by the authors. Delivers focused, comprehensive information on leukemias and lymphomas drawn from the world's leading cancer textbook, DeVita, Hellman, and Rosenberg's Cancer: Principles & Practice of Oncology. Covers the full range of adult lymphomas and leukemias, including the molecular biology of lymphomas and acute and chronic leukemias; Hodgkin's lymphoma; non-Hodgkin's lymphoma; cutaneous lymphomas; management of acute and chronic leukemias, future directions and new treatments; myelodysplastic syndromes; plasma cell neoplasms; and more. Includes comprehensive information on leukemias and lymphomas of childhood, including supportive, long-term, palliative, and hospice care. Discusses in detail the growing importance of prevention and screening, giving you the understanding you need to improve your patients' chances for a healthier, cancer-free life. Explains how the latest developments in biologic therapy apply to leukemias and lymphomas. Provides exhaustive coverage of combined modality cancer treatment, helping you determine when and how to integrate modalities in patient treatment. Ensures that you are fully up to date thanks to easy, mobile access to quarterly updates.

Cancer, Principles and Practice of Oncology DeVita, Hellman, and Rosenberg's Cancer Principles and Practice of Oncology Review Lippincott Williams & Wilkins

Otorhinolaryngology- Head & Neck Surgery Walter de Gruyter

" Radiation Oncology Primer and Review describes the fundamental concepts, nomenclature and definitions of the field of radiation oncology that

every trainee or practitioner needs to know. Divided into three sections, Radiation Oncology Primer and Review covers basic science, clinical science, and technical and planning issues to give the trainee a full overview of the core knowledge base of the field. Co-written by a former radiation oncology residency program director and a team of radiation oncology residents, the book is organized in concise sections and is amply illustrated to highlight key points and help the reader understand and retain major concepts. Treatment approaches consistent with published clinical trial protocols that define control/standard of care/consensus radiation treatment are included. In addition to serving as a primary introduction to the field, the book also offers a short review of fundamental concepts for the senior resident prior to written or oral examinations, and is a useful resource for the radiation oncology educator to develop teaching plans and quizzes. Chapter organization is based on the International Atomic Energy Agency Syllabus for the Education and Training of Radiation Oncologists, the syllabus endorsed by both the American Society for Radiation Oncology and the European Society for Therapeutic Radiology and Oncology. Features of Radiation Oncology Primer and Review: Integrates basic science, clinical science and technical concepts to provide the trainee with a complete introduction to the field of radiation oncology Is consistent with accepted training syllabus for radiation oncology professionals Offers a concise presentation with illustrations highlighting key points Provides key points for study and reviews Includes treatment approaches consistent with published clinical trial protocols that define control/standard of care/consensus radiation treatment Is a valuable review resource for board review "

The new edition of this revision manual provides students with the latest advances and information in medicine. Divided into 25 chapters, the text covers the diagnosis and management of diseases and disorders in all medical subspecialties. The second edition has been fully revised and features new topics including recent advances, new drugs, geriatrics, and immunology. Disease aetiology, diagnostic procedures, radiological investigations and basics of ECG readings are discussed in depth. Important clinical examination-oriented questions are included in each section, with key points emphasised to assist revision. The comprehensive text is highly illustrated with clinical photographs and diagrams. Important management techniques are highlighted in coloured tables. Key points Comprehensive revision manual covering all medical subspecialties for undergraduates Fully revised, second edition featuring many new topics Includes clinical examination-oriented questions to assist revision Previous edition (9789386056610) published in 2016

This book is written by experts with clinical expertise on diagnosis, treatment, and follow-up of women with cancer during pregnancy. It provides a comprehensive review of data and an overview of psychological, ethical, and social aspects. Chapters address the diagnosis, treatment, and follow-up of women with solid or hematologic cancers. The safety of subsequent pregnancy and the maintenance or enhancement of fertility in women undergoing cancer therapy are also addressed.

Management of Soft Tissue Sarcoma JP Medical Ltd

Young medical oncologists, who may often find themselves faced by major complications caused by cancer or by cancer treatment, will welcome this handbook as a highly useful tool to develop their knowledge and skills in the area. Initiated by the European Society for Medical Oncology's (ESMO) Young Medical Oncologists Working Group, this succinct text has been written by a distinguished team of young medical oncologists and senior figures in the field, and is designed to provide oncologists with a secure practical grounding in the correct courses of action to follow in an emergency. The key topics covered include: * cardiovascular complications * neurological complications * renal and urologic complications * metabolic complications * respiratory complications * gastro-intestinal complications * hematologic complications * cancer pain.

TNM Staging Atlas with Oncoanatomy Lippincott Williams & Wilkins

The Routledge History of Disease draws on innovative scholarship in the history of medicine to explore the challenges involved in writing about health and disease throughout the past and across the globe, presenting a varied range of case studies and perspectives on the patterns, technologies and narratives of disease that can be identified in the past and that continue to influence our present. Organized thematically, chapters examine particular forms and conceptualizations of disease, covering subjects from leprosy in medieval Europe and cancer screening practices in twentieth-century USA to the ayurvedic tradition in ancient India and the pioneering studies of mental illness that took place in nineteenth-century Paris, as well as discussing the various sources and methods that can be used to understand the social and cultural contexts of disease. The book is divided into four sections, focusing in turn on historical models of disease, shifting temporal and geographical patterns of disease, the impact of new technologies on categorizing, diagnosing and treating disease, and the different ways in which patients and practitioners, as well as novelists and playwrights, have made sense of their experiences of disease in the past. International in scope, chronologically wide-ranging and illustrated with images and maps, this comprehensive volume is essential reading for anyone interested in the history of health through the ages.

Head and Neck Cancer CRC Press

This volume provides new data about the molecular biology of CRPC and a review of the definition, staging and prognostic factors that define CRPC. The book features an in depth review of proven therapeutic options, including bone targeted therapies, immunotherapy, chemotherapy and hormonal based therapies. Combination therapy as well as novel targeted approaches presently under investigations are also reviewed. The text provides up to date guidelines and algorithms for the management of CRPC based on international guidelines presently available as well as evidence based medicine. As a concise yet comprehensive summary of the current status of the field, Management of Castration Resistant Prostate Cancer serves as a very useful resource for physicians and researchers dealing with this challenging malignancy.

Atlas of Operative Surgical Oncology Lippincott Williams & Wilkins

Otorhinolaryngology- Head & Neck Surgery is the latest edition of this comprehensive two-volume guide to all the sub-specialties of otorhinolaryngology, including brand new chapters and the most recent developments in the field. New topics in this edition include laryngopharyngeal reflux, trauma and stenosis of the larynx, and laryngeal cancer, bringing the text firmly up to date. Illustrated in full colour across 2000 pages, this vast two-volume set is an ideal source of reference for otorhinolaryngology practitioners and residents.

Christensen's Physics of Diagnostic Radiology Oxford University Press

This Scientific Publication reviews the information on cancer sites and mechanistic events for the more than 100 agents classified in Group 1 (carcinogenic to humans) by the IARC Monographs Program. This category of agents is diverse and includes chemicals and chemical mixtures; occupations; metals, dusts, and fibres; radiation; viruses and other biological agents; personal habits; and pharmaceuticals. For the Group 1 agents, there were cross-cutting questions about the relevance to humans of certain cancer sites or mechanistic pathways in animals. This publication is based on a systematic identification and comparison of the cancer sites observed in humans and those observed in experimental animals, and a compilation of mechanistic events for agents known to cause cancer in humans. Relevant information was analyzed on all the agents classified in Group 1 in Monographs up to and including Volume 109, most of which are reviewed in Volume 100A-F. A database of tumor sites seen in humans and animals was used to examine the degree of concordance by use of an anatomically based tumor classification scheme. The analysis of mechanistic aspects of the IARC Group 1 agents focused on 10 key characteristics of human carcinogens developed during the course of this work. Genotoxicity was the most prevalent mechanistic characteristic, consistent with the process of carcinogenesis necessarily involving genomic changes. The IARC concordance database represents a useful source of information for comparing animal and human data with respect to the tumors caused in different species. The results of the mechanistic analysis can provide a basis for future efforts to categorize mechanistic data for carcinogens through a

systematic review process. These reviews and analyses were discussed during a two-part Workshop on Tumour Site Concordance and Mechanisms of Carcinogenesis convened by IARC. This Scientific Publication is the report of that Workshop and of subsequent work by the participants, both individually and collectively. This publication also presents a statement of consensus among the Workshop participants, which summarizes the main findings and their implications for human cancer risk assessment.
