The current peer review process is broken and unless changes are made it will soon die. In *Do We Still Need Peer Review?*, author Thomas H.P. Gould examines the evolution of peer review from the earliest attempts by the Church to evaluate scholarly works to the creation of academic peer review and finally to the current status of the process. Gould argues that without an immediate effort by scholars to institute reform, the future of peer review may cease to exist. As new technology provides authors with a direct, unsupervised route to publication, the peer review situation is nearing a tipping point, beyond which the nature of academic research will be profoundly altered. This book proposes that rather than tossing out peer review altogether, the process can be saved and made stronger, offering suggestions on how to do just that.

"Margaret Cargill's background as a linguist

and research communications educator and Patrick O'Connor's experience as both research scientist and educator synergize to improve both the science and art of scientific writing. If the authors' goal is to give scientists the tools to write and publish compelling, well documented, clear narratives that convey their work honestly and in proper context, they have succeeded admirably." Veterinary Pathology, July 2009 "[The book is] clearly written, has a logical step-by-step structure, is easy to read and contains a lot of sensible advice about how to get scientific work published in international journals. The book is a most useful addition to the literature covering scientific writing." Aquaculture International, April 2009 Writing Scientific Research Articles: Strategy and Steps guides authors in how to write, as well as what to write, to improve their chances of having their articles accepted for publication in international, peer reviewed journals. The book is designed for scientists who use English as a first or an additional language; for research

students and those who teach them paper writing skills; and for early-career researchers wanting to hone their skills as authors and mentors. It provides clear processes for selecting target journals and writing each section of a manuscript, starting with the results. The stepwise learning process uses practical exercises to develop writing and data presentation skills through analysis of well-written example papers. Strategies are presented for responding to referee comments, as well as ideas for developing discipline-specific English language skills for manuscript writing. The book is designed for use by individuals or in a class setting. Visit the companion site at www.writeresearch.com.au for more information.

This report

provides a detailed description of the processes involved in a project to identify English language research-based literature on human trafficking; the databases searched and the keywords used to identify pertinent references; discussion of the development of the taxonomy used to categorize identified research-based journal articles, reports, and books; and the results of the categorization of the research according to the taxonomy.

This report indicates that the oversight of research integrity in the UK is unsatisfactory. The Science and Technology Committee concludes that in order to allow others to repeat and build on experiments, researchers should aim for the gold standard of making their data fully disclosed and made publicly available. The report examines the current peer-review system as used in scientific publications and the related issues of research impact, data management, publication ethics and research integrity. The UK does not

seem to have an oversight body for research integrity covering advice and assurance functions across all disciplines and the Committee recommends the creation of an external regulator. It also says all UK research institutions should have a specific member of staff leading on research integrity. The report highlights concerns about the use of journal Impact Factor as a proxy measure for the quality of research or of individual articles. Innovative ways to improve current pre-publication peer-review practices are highlighted in the report, including the use of pre-print servers, open peer review, increased transparency and online repository-style journals. The growth of post-publication peer review and commentary also represents an enormous opportunity for experimentation with new media and social networking tools, which the Committee encourages. There should also be greater recognition of the work-sometimes considered to be a burden-carried out by reviewers, by both publishers and employers. In order to do this,

publishers need to have in place systems for recording and acknowledging the contribution of those involved in peer review.

This volume synthesizes and critically analyzes the literature on response to the writing of second language students, and discusses the implications of the research for teaching practice in the areas of written and oral teacher commentary on student writing, error correction, and facilitation of peer response. The book features numerous examples of student texts and teacher commentary, as well as figures and appendices that summarize research findings and present sample lessons and other teaching materials. It is thus simultaneously comprehensive in its approach to the existing research and highly

practical in showing current and future teachers how this material applies to their everyday endeavors of responding to student writing and teaching composition classes. Response to student writing--whether it takes the form of teachers' written feedback on content, error correction, teacher-student conferences, or peer response--is an extremely important component of teaching second language writing. Probably no single activity takes more teacher time and energy. Response to Student Writing is a valuable theoretical and practical resource for those involved in this crucial work, including L2 composition researchers, in-service and preservice teachers of ESOL/EFL writers, and teacher educators preparing graduate students for the teaching of writing.

Do We Still Need Peer Review? SAGE

Publications

Students are frequently asked to engage in peer review and response activities in writing classrooms across the curriculum. But how can, and why should, teachers make peer response a major part of their pedagogy that really works well for their students and themselves? *Peer Pressure, Peer Power* delivers original essays that engage tough pedagogical questions from authors who resist easy answers. This collection includes essays that examine the nature of peer response in theory and in practice from scholars representing composition-rhetoric, writing center, and

WAC/WID across the country. The book provides new and experienced teaching assistants and instructors, WPAs, writing center personnel, WAC personnel, and service learning personnel with both a theoretical and practical resource for peer response in writing classrooms. But the authors in this collection go a pedagogical step or two further: they map several interconnections between classroom and writing center and other peer tutoring theories and practices, showing the ways that a deeper understanding of peer response can help teachers and tutors provide better feedback to students writing; they suggest the connections

between peer response and designing effective writing assignments and rubrics, touching on how important student input really is in all phases of our pedagogy; they bring the value of teaching and learning with student texts to vivid life; and they illustrate specific ways that classrooms and one-to-one and small-group conferences can become highly interactive, synergistic sites for the teaching and learning of writing.
