CORDOVA DEVAN

Rhetorical Argumentation Imprensa da Universidade de Coimbra / Coimbra University Press

A comprehensive guide to the language of argument, *Rhetorical Style* offers a renewed appreciation of the persuasive power of the English language. Drawing on key texts from the rhetorical tradition, as well as on newer approaches from linguistics and literary stylistics, Fahnestock demonstrates how word choice, sentence form, and passage construction can combine to create effective spoken and written arguments. With examples from political speeches, non-fiction works, and newspaper reports, *Rhetorical Style* surveys the arguer's options at the word, sentence, interactive, and passage levels, and illustrates the enduring usefulness of rhetorical stylistics in analyzing and constructing arguments.

Persuading People SAGE

"This best-selling combination rhetoric and thematically organized reader shows students how to analyze all kinds of arguments, not just essays and editorials, but clothes, smartphone apps, ads, and Web site designs, and then how to use what they learn to write their own effective arguments. Newly streamlined and featuring e-Pages that take argument online, its signature engaging, informal, and jargon-free instruction emphasizes cultural currency, humor, and visual argument."--Back cover.

A Special Issue of Technical Communication Quarterly Ingram

This book begins by defining argumentation--not as emotional assertions or in other negative senses--

but as a logical, rational approach to making good decisions based upon sound reasoning. The author relies on the contributions of Aristotle (plus Aristotle's teacher, Plato, and Plato's teacher, Socrates) rather than attempting to "reinvent the wheel" of argumentation. Aristotle's perspective on dialectic and rhetoric constitutes the ground on which rhetoricians in the ancient Roman world, and rhetorical theoreticians of the Twentieth and Twenty-first Centuries have built. Contemporary scholars such as Kenneth Burke, Stephen Toulmin, and Chaim Perelman have refined Aristotle's wheel, and hence, improved upon it, but students of argumentation are well-advised to return, first of all, to the invention of the wheel-to examine its construction, to see how the basic structures operate in the argumentation process. Students of argumentation may, then, consider the refinements that have been made over the years. Using insights introduced by Socrates, Plato, and Aristotle and, later, fine-tuned by Stephen Toulmin, the book introduces deductive reasoning with its syllogism, rhetorical syllogism (the enthymeme), and Toulmin's six-part expansion of deductive reasoning. Inductive reasoning, with its reliance on examples and statistics is also introduced. Although argumentation is defined by Lindsay as primarily the logical proof presented by Aristotle (logos, as opposed to ethos and pathos), Lindsay extends Aristotle's concept of ethos to demonstrate the concept's reliance on the syllogism (logos), as well. Lindsay lists the eight primary characteristics of argumentation: 1. It is good; it allows rational individuals to reach rational conclusions, to make rational decisions. 2. It consists of offering proofs, not

simply assertions. 3. It is the use of logic, as opposed to the use of emotion. 4. It is most successful when the participants do not feel an ego-centric need to win, but instead seek to find the most reasonable position on issues. 5. It may be used to test and maintain either an absolute truth or a probable truth. 6. It, at least, seeks to establish probable, possible, or plausible truth. 7. It is aimed primarily at producing faith/pistis, rather than absolute knowledge. 8. It uses proofs that consist only of logos, not ethos or pathos. To Aristotle's three contexts of rhetorical argumentation (judicial/legal, deliberative/political, and epideictic/cultural), Lindsay adds a fourth: arguments concerning all-time truth. Lindsay ultimately offers a thorough demonstration of how the multiple principles of argumentation are used to demonstrate that a problem exists, what caused the problem, what types of solutions to the problem are suitable, and how a complete proposal argument is put together.

Principles of Theory and Practice
Routledge

The study of argumentation has primarily focused on logical and dialectical approaches, with minimal attention given to the rhetorical facets of argument. *Rhetorical Argumentation: Principles of Theory and Practice* approaches argumentation from a rhetorical point of view and demonstrates how logical and dialectical considerations depend on the rhetorical features of the argumentative situation. Throughout this text, author Christopher W. Tindale identifies how argumentation as a communicative practice can best be understood by its rhetorical features.

The State of Rhetoric of Science and Technology Three Rivers Press (CA)

This book develops academic writing in higher education. Viewing writing as a complex sociocultural act, it analyses key issues in writing environments and their impact on student writing. Drawing on research, practice and the existing body of knowledge, it also offers practical writing activities that can be used with students in the disciplines.

The Writer's Argument Routledge

This fascinating and practical book explores persuasive techniques in the English language, and is the ideal introduction for students and others with a professional interest in persuasion.

Using a wide range of lively and accessible illustrative material, Robert Cockcroft and Susan Cockcroft unpick the complexities of persuasive language - both written and spoken - and enable readers to develop and enhance their rhetorical skills. Now thoroughly revised and expanded, the second edition of this successful text includes: - developed application of cognitive linguistic theory, which sheds new light on the emotional and logical powers of persuasion - extended and updated examples of rhetoric in action - clear pointers for further study to allow readers to continue their exploration into rhetorical theory and practice - a new final chapter which invites readers to practice their skills using updated versions of traditional rhetorical exercises.

Writing Arguments A Rhetoric of Argument

"The Dialectical Questions offers an English translation of the *Erotemata* *Dialectices*, the final and fullest textbook on the art of argumentation written by the reformer and educational innovator

Philip Melanchthon (1497-1560). Representing an era when rhetoric and dialectic were seen as interdependent, companion arts, Melanchthon's textbook was widely used in Protestant Latin schools and universities during the Reformation. The translation tracks revisions to the text across its lifetime editions (1547-1560) and traces its classical sources. The introduction chronicles the personal and political upheavals that Melanchthon experienced during its composition, and provides an overview of its rich and complex content. It then focuses on the unique feature that sets this work apart from other early modern dialectics: its many sample arguments drawn from medicine and natural philosophy"--

A Rhetoric of Argument Bedford Books

Bringing together scholars from a broad range of theoretical perspectives, *The Language of Argumentation* offers a unique overview of research at the crossroads of linguistics and theories of argumentation. In addition to theoretical and methodological reflections by leading scholars in their fields, the book contains studies of the relationship between language and argumentation from two different viewpoints. While some chapters take a specific argumentative move as their point of departure and investigate the ways in which it is linguistically manifested in discourse, other chapters start off from a linguistic construction, trying to determine its argumentative function and rhetorical potential. *The Language of Argumentation* documents the currently prominent research on stylistic aspects of argumentation and illustrates how the study of argumentation benefits from insights from linguistic models, ranging from theoretical pragmatics, politeness theory and metaphor studies

to models of discourse coherence and construction grammar.

The Principles of Argumentation

University of Windsor

Understanding Rhetoric: A Guide to Critical Reading and Argumentation is a composition textbook that outlines three essential skills – rhetoric, argument, and source-based writing – geared towards newcomers and advanced students alike. Though comprehensive in its coverage, the book's focus is a simple one: how to move beyond a "gut reaction" while reading to an articulation of what is effective and what is not, while explicitly answering the most important question of "Why?" This text gets at this central concern in two fundamental ways. First, the text teaches composition as a cumulative process, coaching you how to question, challenge, and expand on not just the readings you hold in your hands, but also how to interrogate the internal processes of writing and thinking. The book's blend of composition methods detail the cross-point of product and process to turn reading and writing from a matter of coming up with answers to questions to learning what type of questions need to be asked in the first place. The "right" questions, the text argues, are fundamentally rhetorical in nature. Second, the content of the practice-based chapters is framed into a larger mesh of intellectual history to show how the writing and thinking you are doing today is continuous with a long history of writing instruction that goes back to the ancient world. This book provides equal representation from classical and contemporary theory with the recognition that theory cannot be fully grasped without practice, and practice cannot be fully understood without its theoretical antecedent. After all, you

can't write "outside the box" until you know where the box is and what it looks like.

An Introduction to Rhetoric Longman Publishing Group

As discrete fields of inquiry, rhetoric and mathematics have long been considered antithetical to each other. That is, if mathematics explains or describes the phenomena it studies with certainty, persuasion is not needed. This volume calls into question the view that mathematics is free of rhetoric. Through nine studies of the intersections between these two disciplines, *Arguing with Numbers* shows that mathematics is in fact deeply rhetorical. Using rhetoric as a lens to analyze mathematically based arguments in public policy, political and economic theory, and even literature, the essays in this volume reveal how mathematics influences the values and beliefs with which we assess the world and make decisions and how our worldviews influence the kinds of mathematical instruments we construct and accept. In addition, contributors examine how concepts of rhetoric—such as analogy and visuality—have been employed in mathematical and scientific reasoning, including in the theorems of mathematical physicists and the geometrical diagramming of natural scientists. Challenging academic orthodoxy, these scholars reject a math-equals-truth reduction in favor of a more constructivist theory of mathematics as dynamic, evolving, and powerfully persuasive. By bringing these disparate lines of inquiry into conversation with one another, *Arguing with Numbers* provides inspiration to students, established scholars, and anyone inside or outside rhetorical studies who might be interested in exploring the intersections between the two

disciplines. In addition to the editors, the contributors to this volume are Catherine Chaput, Crystal Broch Colombini, Nathan Crick, Michael Dreher, Jeanne Fahnestock, Andrew C. Jones, Joseph Little, and Edward Schiappa.

Science and the Internet International Studies in the H

This book is designed to introduce readers to the language of contemporary rhetorical studies. The book format is an alphabetized glossary (with appropriate cross listings) of key terms and concepts in contemporary rhetorical studies. An introductory chapter outlines the definitional ambiguities of the central concept of rhetoric itself. The primary emphasis is on the contemporary tradition of rhetorical studies as it has emerged in the discipline of speech communication. Each entry in the glossary ranges in length from a few paragraphs to a short essay of a few pages. Where appropriate, examples are provided to further illustrate the term or concept. Each entry will be accompanied by a list of references and additional readings to direct the reader to other materials of possible interest.

Sourcebook on Rhetoric Bedford Books First Published in 2017. Routledge is an imprint of Taylor and Francis, an Informa company.

Understanding Rhetoric John Benjamins Publishing

So What? The Writer's Argument, Third Edition, teaches students how to write compelling arguments and explains why practicing argumentation is essential to learning and communicating with others. Practical exercises throughout each chapter reinforce this broader academic aim by focusing on the key issue of significance—helping writers answer the "So What?" question for themselves and their audiences. By showing students

how their writing fits within the broader context of academic inquiry, *So What?*, Third Edition, encourages them to emulate and adapt the authentic academic styles, foundational organizing structures, and helpful rhetorical moves to their college classes and beyond. *Readings in Argument* Routledge Rhetoric is the art of speech and persuasion, the study of argument and, in Classical times, an essential component in the education of the citizen. For rhetoricians, politics is a skill to be performed and not merely observed. Yet in modern democracies we often suspect political speech of malign intent and remain uncertain how properly to interpret and evaluate it. Public arguments are easily dismissed as 'mere rhetoric' rather than engaged critically, with citizens encouraged to be passive consumers of a media spectacle rather than active participants in a political dialogue. This volume provides a clear and instructive introduction to the skills of the rhetorical arts. It surveys critically the place of rhetoric in contemporary public life and assesses its virtues as a tool of political theory. Questions about power and identity in the practices of political communication remain central to the rhetorical tradition: how do we know that we are not being manipulated by those who seek to persuade us? Only a grasp of the techniques of rhetoric and an understanding of how they manifest themselves in contemporary politics, argues the author, can guide us in answering these perennial questions. *Politics and Rhetoric* draws together in a comprehensive and highly accessible way relevant ideas from discourse analysis, classical rhetoric updated to a modern setting, relevant issues in contemporary political theory, and

numerous carefully chosen examples and issues from current politics. It will be essential reading for all students of politics and political communications. *Everything's an Argument with Readings* BrownWalker Press Being a faithful disciple of Christ means having seasoned speech: practicing a rhetoric that beneficially and persuasively imparts the surprising truth of the gospel. James Beitler seeks to renew interest in and hunger for an effective Christian rhetoric by closely considering the work of five beloved Christian communicators: C. S. Lewis, Dorothy L. Sayers, Dietrich Bonhoeffer, Desmond Tutu, and Marilynne Robinson. **A Rhetoric and Reader** Emerald Group Publishing David Morrow and Anthony Weston build on Weston's acclaimed *A Rulebook for Arguments* to offer a complete textbook for a course in critical thinking or informal logic. Features of the book include: Homework exercises adapted from a wide range of actual arguments from newspapers, philosophical texts, literature, movies, YouTube videos, and other sources. Practical advice to help students succeed when applying the Rulebook's rules. Suggestions for further practice that outline activities students can do by themselves or with classmates to improve their critical thinking skills. Detailed instructions for in-class activities and take-home assignments designed to engage students in critical thinking. An appendix on mapping arguments, a topic not included in the Rulebook, that introduces students to this vital skill in evaluating or constructing complex and multi-step arguments. Model responses to odd-numbered exercises, including commentaries on the strengths and weaknesses of selected model responses

as well as further discussion of some of the substantive intellectual, philosophical, and ethical issues raised by the exercises. The third edition of Workbook contains the entire text of the recent fifth edition of the Rulebook, supplementing this core text with extensive further explanations and exercises. Updated and improved homework exercises ensure that the examples continue to resonate with today's students. Roughly one-third of the exercises have been replaced with updated or improved examples. A new chapter on engaging constructively in public debates—including five new sets of exercises—trains students to engage respectfully and constructively on controversial topics, an increasingly important skill in our hyper-partisan age. Three new critical thinking activities offer further opportunities to practice constructive dialogue.

Rhetoric and Argumentation in the Beginning of the XX Century McGraw-Hill Humanities, Social Sciences & World Languages

When it was first published in 1982, "A Rhetoric of Argument" developed a ground-breaking new approach to teaching argument. The "stasis approach" pioneered by Fahnestock and Secor distinguished among the four basic questions that arguments are written to answer: What is it? (Definition arguments) How did it get that way? (Causal arguments) Is it good or bad? (Evaluation arguments) What should we

do about it? (Proposal arguments) These four questions, now standard in many argument texts, give students a constructive, engaging way to analyze readings by other writers and to construct their own arguments.

Arguing about Doing Routledge Christian Kock's essays show the essential interconnectedness of practical reasoning, rhetoric and deliberative democracy. They constitute a unique contribution to argumentation theory that draws on – and criticizes – the work of philosophers, rhetoricians, political scientists and other argumentation theorists. It puts rhetoric in the service of modern democracies by drawing attention to the obligations of politicians to articulate arguments and objections that citizens can weigh against each other in their deliberations about possible courses of action.

Rhetorical Style Longman Publishing Group

In *The Uses of Argument* (1958), Stephen Toulmin proposed a model for the layout of arguments: claim, data, warrant, qualifier, rebuttal, backing. Since then, Toulmin's model has been appropriated, adapted and extended by researchers in speech communications, philosophy and artificial intelligence. This book assembles the best contemporary reflection in these fields, extending or challenging Toulmin's ideas in ways that make fresh contributions to the theory of analysing and evaluating arguments.
