This book is the sixth in a series of publications on the subject of integrated science teaching and is based on the proceedings of a consultation meeting held on the theme "Recent Developments in Integrated Science Teaching Worldwide". The meeting was organized by the Australian National Commission for Unesco, in cooperation with the International Council of Associations in Science Education (ICASE) and with the Australian Science Teachers' Association. The intention of the book is to reflect how far integrated science teaching had spread around the world. The chapters in the first part of this book describe key issues in integrated science and broad trends in the approaches to integrated science teaching worldwide. They include the conclusions of five working groups set up during the meeting to discuss the key issues in the following areas: (1) content (developments in science and technology and their implications for science education); (2) curriculum and resource materials; (3) teaching, learning, and assessment; (4) equipment and science teaching facilities; and (5) teacher education. The following articles are included in eight chapters of Part I: "What Is Integrated Science Teaching: Its Beginnings and Its Place Today" (Dennis G. Chisman); "Reflections on the Development of Integrated Science Teaching Projects for 4-16 Year Olds" (Kerst Th. Boersma, and others); "The Integration of Science Teaching through Science-Technology-Society Courses" (John Holman); and "Teacher Behaviours Which Facilitate Integrated Science Teaching" (Ronald J. Bonnstetter). The second part of the book describes national and regional developments in the teaching of integrated science in Africa, the Arab States, Asia and the South Pacific, Europe and North America, Latin America and the Caribbean; and is based largely on the reports and discussions at the meeting. The third part contains some examples of topics and modules of integrated science courses taken from recent courses in Botswana, the Caribbean, the Netherlands, the Philippines, Sierra Leone, and the United Kingdom. The fourth part is an annotated bibliography (over 370 entries) which attempts to sample literature relevant to integrated science. (KR)

This volume contains the proceedings of the Fourth Workshop on Hybrid - stems: Computation and Control (HSCC 2001) held in Rome, Italy on March 28-30, 2001. The Workshop on Hybrid Systems attracts researchers from industry and academia interested in modeling, analysis, synthesis, and implementation of dynamic and reactive systems involving both discrete (integer, logical, symbolic) and continuous behaviors. It is a forum for the discussion of the latest developments in all aspects of hybrid systems, including formal models and computational representations, algorithms and heuristics, computational tools, and new challenging applications. The Fourth HSCC International Workshop continues the series of workshops held in Grenoble, France (HART'97), Berkeley, California, USA (HSCC'98), N-megen, The Netherlands (HSCC'99), and Pittsburgh, Pennsylvania, USA (HSCC 2000). Proceedings of these workshops have been published in the Lecture Notes in Computer Science (LNCS) series by Springer-Verlag. In line with the beautiful work that led to the design of the palace in which the workshop was held, Palazzo Lancellotti in Rome, resulting from the collaboration of many artists and architects of different backgrounds, the challenge faced by the hybrid system community is to harmonize and extract the best from two main research areas: computer science and control theory.

This book for the first time brings together Professor Pring's thoughts on the philosophy of education and is his first global treatment of the subject. His writings reflect a consistency of thought about educational theory and educational aims-and the consequence of both for the nature and practice of educational research. Professor Pring draws together the different themes, providing a distinctively philosophical perspective on educational theory and practice. This perspective challenges many of the ideas, which underpin government policy, impoverish educational practice and weaken educational research in a way unacknowledged even by the research's most ardent critics.

Stochastic processes are found in probabilistic systems that evolve with time. Discrete stochastic processes change by only integer time steps (for some time scale), or are characterized by discrete occurrences at arbitrary times. Discrete Stochastic Processes helps the reader develop the understanding and intuition necessary to apply stochastic process theory in engineering, science and operations research. The book approaches the subject via many simple examples which build insight into the structure of stochastic processes and the general effect of these phenomena in real systems. The book presents mathematical ideas without recourse to measure theory, using only minimal mathematical analysis. In the proofs and explanations, clarity is favored over formal rigor, and simplicity over generality. Numerous examples are given to show how results fail to hold when all the conditions are not satisfied. Audience: An excellent textbook for a graduate level course in engineering and operations research. Also an invaluable reference for all those requiring a deeper understanding of the subject.
