THE STORY: The play is a kind of poetic and comic fable set in the twilight zone of the not-quite-true. At the Cafe Chez Francis, a group of promoters plot to tear up Paris in order to unearth the oil which a prospector believes he has located in t

Rome 2018 Calendar John Wiley & Sons

Recently, technology and aging have been key research areas in human cognition. The Research Topic “Digital Skills and Life-long Learning: Digital Learning as a New Insight of Enhanced Learning by the Innovative Approach Joining Technology and Cognition” investigated technology's impact on cognitive and intellectual processes, highlighting how intensively technology can change and/or enhance the cognitive functioning throughout one's lifespan. The aim of this Research Topic was to provide an outlook through multidisciplinary research and development while addressing the dynamic intersection of cognition, mind, and technology. Our scope was 1) to favor the cognitive technology debate, 2) to overcome the dichotomies of technology and psychology, 3) to emphasize the advances in knowledge and well-being. This Research Topic comprises review studies and original articles, focused on digital skills that enhance human potential. Transversal approaches and cross-sectorial analysis were encouraged, leading to investigation areas related to cognitive and mental processing—in educational, rehabilitation, clinical settings—across aging. Articles of high relevance to the Research Topic were submitted on the subjects of a) research in human

performance and human factors, b) new research and technologies addressing the needs of a growing populace, and c) cognitive aging and cognitive rehabilitation research.

Hansel and Gretel Phaidon

The contents of this book are mainly based on ideas discussed within the framework of the 2016 International Conference on Typography and Visual Communication (ICTVC). This event was initiated at the beginning of the new millennium and has since developed into an internationally respected event. The chapters included in this volume provide evidence of visual communication as an established discipline where critical research informs design practice, printing history lays the foundations for future projects, and professional practice benefits from cross-disciplinary collaborations. The anthology investigates both current and future challenges and priorities in the field of design for visual communication, and will serve to provide a vivid spark to start a discourse in this regard. It will become a working tool and reference point for people interested in studying and researching typography and visual communication.

Culture Builders Cambridge University Press

The book provides an introduction to Differential Geometry of Curves and Surfaces. The theory of curves starts with a discussion of possible definitions of the concept of curve, proving in particular the classification of 1-dimensional manifolds. We then present the classical local theory of parametrized plane and space curves (curves in n-

dimensional space are discussed in the complementary material): curvature, torsion, Frenet's formulas and the fundamental theorem of the local theory of curves. Then, after a self-contained presentation of degree theory for continuous self-maps of the circumference, we study the global theory of plane curves, introducing winding and rotation numbers, and proving the Jordan curve theorem for curves of class C^2 , and Hopf theorem on the rotation number of closed simple curves. The local theory of surfaces begins with a comparison of the concept of parametrized (i.e., immersed) surface with the concept of regular (i.e., embedded) surface. We then develop the basic differential geometry of surfaces in R^3 : definitions, examples, differentiable maps and functions, tangent vectors (presented both as vectors tangent to curves in the surface and as derivations on germs of differentiable functions; we shall consistently use both approaches in the whole book) and orientation. Next we study the several notions of curvature on a surface, stressing both the geometrical meaning of the objects introduced and the algebraic/analytical methods needed to study them via the Gauss map, up to the proof of Gauss' Teorema Egregium. Then we introduce vector fields on a surface (flow, first integrals, integral curves) and geodesics (definition, basic properties, geodesic curvature, and, in the complementary material, a full proof of minimizing properties of geodesics and of the Hopf-Rinow theorem for surfaces). Then we shall present a proof of the celebrated Gauss-Bonnet theorem, both in its local and in its global form, using basic properties (fully proved in the complementary material) of triangulations of surfaces. As an

application, we shall prove the Poincaré-Hopf theorem on zeroes of vector fields. Finally, the last chapter will be devoted to several important results on the global theory of surfaces, like for instance the characterization of surfaces with constant Gaussian curvature, and the orientability of compact surfaces in R^3 .

Principles of Power Electronics Capstone

This book brings together the latest literature and European experiences on preventing youth violent radicalisation and violent actions in intergroup relations. Youth violent radicalisation is a significant problem within the European context, and requires an exploration of how various social actors can play an active role in preventing radicalisation in minors and young adults. This complex issue needs to be explored through a multidisciplinary approach, and effective operational models are needed in order to tackle it. This book describes the theoretical framework for such an approach in all its facets. The book's originality lies in its psychosocial and participatory approach, aimed at improving results through professional training and community empowerment for building trusting relationships and educational activities. It also proposes "alternative narratives", which are a way of representing people and groups within a social context, thereby overcoming stereotyped visions and stigma. This book focuses on participation and communication among stakeholders, social inclusion, strengthening democratic values, and pursuing a proactive instead of a reactive approach to preventing radicalisation. Highly topical, the book will appeal to researchers and students of the social and behavioural sciences interested in youth radicalisation, including social

work and social policy, as well as practitioners working within the juvenile justice system.

Archeologia Medievale, XLVIII, 2021

Rutgers University Press

Most contemporary poets wear their cultural and artistic influences on their sleeve. Picking up a book in an English language bookstore, it is easy to see where the poet is coming from, either geographically, or culturally (ironic and formal; confessional and free etc). This may seem reductive until you read a book like the one you have in your hands. Put simply, Mia Lecomte is a quietly dazzling poet on her own terms. She is fed by multiple cultures, she is widely read, but her writing is unique and absolutely genuine. You won't have read anything like this.

Illustrators Annual 2020 Hoaki

This book examines the implications of risk management for policy in agriculture. Opening with a chapter on risk management principles and guidelines for policy design in agriculture, the book goes on to look at quantitative analysis of risk and then at policy in various countries.

This book could be used as a text for virtually any introductory materials science and engineering course. It is suitable not only for materials majors, but also for students studying the disciplines of chemical, civil, electrical, and mechanical engineering.

Who's Who 2022 Kodansha America LLC

Modern technical advancements in areas such as robotics, multi-body systems, spacecraft, control, and design of complex mechanical devices and mechanisms in industry require the knowledge to solve advanced concepts in dynamics. "Mechanisms and Robots Analysis with MATLAB" provides a thorough, rigorous presentation of kinematics and dynamics. The book uses MATLAB as a tool to solve problems from the field of mechanisms and robots. The book discusses the tools for formulating the mathematical equations, and also the methods of solving them using a modern computing tool like MATLAB. An emphasis is placed on basic concepts, derivations, and interpretations of the general principles. The book is of great benefit to senior undergraduate and graduate students interested in the classical principles of mechanisms and robotics systems. Each chapter introduction is followed by a careful step-by-step presentation, and sample problems are provided at the end of every chapter.

What is a Designer Springer Science & Business Media

Illustrators Annual 2020 is the 2020 edition of Chronicle Books' yearly publication celebrating artists featured at the Bologna Children's Book Fair. Selected by the year's jury at the fair, these illustrators represent the most daring, exciting artistic minds working across the world. Celebrating debut and storied talent from around the world--

talent poised to engage a whole new generation of book lovers--this glorious compendium can be read cover-to-cover or browsed through at random. * An annual publication that brings groundbreaking art from around the world to the English-speaking market * Inspires readers to marvel at the brilliance of the gifts shared by children's book illustrators * Provides a fascinating peek into the world of global children's book illustration A highlight of the time-honored gathering of children's publishers in Bologna, Italy, the Illustrators Annual is juried every year from the finest art at the show. Every year a new issue is published, each filled with art that represents the best of illustration today--and to come. * A must-have inspirational source for illustrators, artists, designers, and art fans alike, as well as educators, librarians, independent bookstore employees, and hardcore fans of children's books * The Bologna Illustrators Annual has long been a prized resource for artists, illustrators, and designers. * Great for those who enjoyed *Illustrating Children's Books: Creating Pictures for Publication* by Martin Salisbury, *Writing Picture Books: A Hands-On Guide From Story Creation to Publication* by Ann Whitford Paul, *A Poem for Peter: The Story of Ezra Jack Keats and the Creation of The Snowy Day* by Andrea Davis Pinkney

100 Things Every Designer Needs to Know About People CRC Press

We design to elicit responses from people. We want them to buy something, read more, or take action of some kind. Designing without understanding what makes people act the way they do is like exploring a new city without a map: results will be haphazard, confusing, and inefficient.

This book combines real science and research with practical examples to deliver a guide every designer needs. With it you'll be able to design more intuitive and engaging work for print, websites, applications, and products that matches the way people think, work, and play. Learn to increase the effectiveness, conversion rates, and usability of your own design projects by finding the answers to questions such as: What grabs and holds attention on a page or screen? What makes memories stick? What is more important, peripheral or central vision? How can you predict the types of errors that people will make? What is the limit to someone's social circle? How do you motivate people to continue on to (the next step? What line length for text is best? Are some fonts better than others? These are just a few of the questions that the book answers in its deep-dive exploration of what makes people tick.

Ghost in the Shell: Global Neural Network Cambridge Scholars Publishing
The second edition of a bestselling textbook, *Using R for Introductory Statistics* guides students through the basics of R, helping them overcome the sometimes steep learning curve. The author does this by breaking the material down into small, task-oriented steps. The second edition maintains the features that made the first edition so popular, while updating data, examples, and changes to R in line with the current version. See *What's New in the Second Edition*: Increased emphasis on more idiomatic R provides a grounding in the functionality of base R. Discussions of the use of RStudio helps new R users avoid as many pitfalls as possible. Use of knitr package makes code easier to read and therefore easier to reason about. Additional information on computer-

intensive approaches motivates the traditional approach. Updated examples and data make the information current and topical. The book has an accompanying package, `UsingR`, available from CRAN, R's repository of user-contributed packages. The package contains the data sets mentioned in the text (`data(package="UsingR")`), answers to selected problems (`answers()`), a few demonstrations (`demo()`), the errata (`errata()`), and sample code from the text. The topics of this text line up closely with traditional teaching progression; however, the book also highlights computer-intensive approaches to motivate the more traditional approach. The authors emphasize realistic data and examples and rely on visualization techniques to gather insight. They introduce statistics and R seamlessly, giving students the tools they need to use R and the information they need to navigate the sometimes complex world of statistical computing.

Modal Analysis Theory and Testing OECD Publishing

Across the United States, Black people have shorter life expectancies than white people—reflecting structural racism and deep-rooted drivers of population health. But are some cities more equal than others? The elimination of racial and ethnic inequities—differences that are avoidable, unnecessary, and unfair—has been one of the overarching health-related goals of the United States for decades. Yet dramatic differences in health outcomes between Black people and white people persist, rooted in structural and social determinants of health. Nationally, a Black baby can expect to live four years less than a white baby. But mortality outcomes and

inequities vary widely across cities. In Washington, DC, for example, the average life expectancy for Blacks is twelve years less than that of whites. But in other cities, mortality differences between races are less striking or nonexistent. If health equity can be achieved in some cities, why not all? This is arguably the most important health equity issue of our time. In *Unequal Cities*, Maureen R. Benjamins and Fernando G. De Maio gather a team of experts to explore these racial inequities, as well as the ten-year gap in life expectancy between our healthiest and unhealthiest big cities. Rigorous analyses give readers access to previously unavailable data on life expectancy, mortality from leading causes of death, and related Black-white inequities for the country's 30 biggest cities. The theoretically grounded essays also explore how characteristics of cities, including their levels of income inequality and racial segregation, impact overall health and Black-white inequities. The first book to specifically examine racial health inequities within and across US cities, *Unequal Cities* offers a social justice framework for addressing the newly identified inequities, as well as specific case studies to help public health advocates, civic leaders, and other stakeholders envision the steps needed to improve their cities' current health outcomes and achieve racial equity. A powerful call to action for health equity advocates and city leaders alike, this book is essential reading. Who's Who 2022 is the 174th edition of the world's longest established and most comprehensive general reference book, brought right up to date for the year ahead. The first autobiographical reference book in the world and, after 173 years, still the most accurate and reliable resource for information on people of influence and interest in every area of public life. Each edition is heavily updated using information supplied and checked by the entrants themselves, alongside research from many other independent sources. The book provides biographical information for people from all areas of society, including government, law, medicine, business, the church, media and the arts, with details not only of entrants' careers, but also their family, education, recreations and clubs. The 2022 edition includes more than 33,000 autobiographical entries, including approximately 600 new entries, an obituaries section, listing the entrants who have died since the previous edition, and a two-page Royal Family section.

The 2020 edition of the WWDR, titled 'Water and Climate Change' illustrates the critical linkages between water and climate change in the context of the broader sustainable development agenda. Supported by examples from

across the world, it describes both the challenges and opportunities created by climate change, and provides potential responses - in terms of adaptation, mitigation and improved resilience - that can be undertaken by enhancing water resources management, attenuating water-related risks, and improving access to water supply and sanitation services for all in a sustainable manner. It addresses the interrelations between water, people, environment and economics in a changing climate, demonstrating how climate change can be a positive catalyst for improved water management, governance and financing to achieve a sustainable and prosperous world for all. The report provides a fact-based, water-focused contribution to the knowledge base on climate change. It is complementary to existing scientific assessments and designed to support international political frameworks, with the goals of helping the water community tackle the challenges of climate change, and informing the climate change community about the opportunities that improved water management offers in terms of adaptation and mitigation.
