Is there an option to oppose without automatically participating in the opposed? This volume explores different perspectives on dissent, understanding practices, cultures, and theories of resistance, dispute, and opposition as inherently participative. It discusses aspects of the body as a political instance, the identity and subjectivity building of individuals and groups, (micro-)practices of dissent, and theories of critique from different disciplinary perspectives. This collection thus touches upon contemporary issues, recent protests and movements, artistic

subversion and dissent, online activism as well as historic developments and elemental theories of dissent.

From Picasso's Cubism and Duchamp's readymades to Warhol's silkscreens and Smithson's earthworks, the art of the twentieth century broke completely with earlier artistic traditions. A basic change in the market for advanced art produced a heightened demand for innovation, and young conceptual innovators – from

Picasso and Duchamp to Rauschenberg and Warhol to Cindy Sherman and Damien Hirst – responded not only by creating dozens of new forms of art, but also by behaving in ways that would have been incomprehensible to their predecessors. *Conceptual Revolutions in Twentieth-Century Art* presents the first systematic analysis of the reasons for this discontinuity. David W. Galenson, whose earlier research has changed our understanding of creativity, combines social scientific methods with qualitative analysis to produce a fundamentally new interpretation of modern art that will give readers a far deeper appreciation of the art of the past century, and of today, than is available elsewhere.

Man and Woman: A Study of Secondary and Tertiary Sexual Characters, Eight Edition Revised covers the developments of

biological investigation of male and female sexual characteristics. This 16-chapter book specifically considers the radical and essential characters of men and women uninfluenced by external modifying conditions. This book starts with an introduction to the boundary between secondary and tertiary sexual characters. The subsequent chapters examine some of the measurable sex differences in terms of metabolism, the viscera, the growth and body proportions, and the senses. Other chapters describe the anatomical distinction between sexes, including the pelvis and the head. A chapter highlights the phenomena of menstruation of women. The discussion then shifts to tertiary sexual character determinants, such as motion, unconscious state, emotion, and artistic and intellectual impulse. The final chapters tackle the issue of variational tendency in men and women. These chapters also provide a summary of what is known about sexual character distinction. Psychologists, psychiatrists, endocrinologists, and development biologists will find this book rewarding.
