The first comprehensive history of the Lakota Indians and their profound role in shaping America's history Named One of the New York Times Critics' Top Books of 2019 - Named One of the 10 Best History Books of 2019 by Smithsonian Magazine - Winner of the MPIBA Reading the West Book Award for narrative nonfiction "Turned many of the stories I thought I knew about our nation inside out."--Cornelia Channing, Paris Review, Favorite Books of 2019 "My favorite non-fiction book of this year."--Tyler Cowen, Bloomberg Opinion "A brilliant, bold, gripping history."--Simon Sebag Montefiore, London Evening Standard, Best Books of 2019 "All nations deserve to have their stories told with this degree of attentiveness"--Parul Sehgal, New York Times This first complete account of the Lakota Indians traces their rich and often surprising history from the early sixteenth to the early twenty-

first century. Pekka Hämäläinen explores the Lakotas' roots as marginal hunter-gatherers and reveals how they reinvented themselves twice: first as a river people who dominated the Missouri Valley, America's great commercial artery, and then--in what was America's first sweeping westward expansion--as a horse people who ruled supreme on the vast high plains. The Lakotas are imprinted in American historical memory. Red Cloud, Crazy Horse, and Sitting Bull are iconic figures in the American imagination, but in this groundbreaking book they emerge as something different: the architects of Lakota America, an expansive and enduring Indigenous regime that commanded human fates in the North American interior for generations. Hämäläinen's deeply researched and engagingly written history places the Lakotas at the center of American history, and the results are revelatory.

THE CLASSIC WORK OF ARCHIMEDES The Sand-Reckoner Dimensio Circuli of Archimedes Translated by Thomas L. Heath (Original publication: Cambridge University Press, 1897). The Sand Reckoner is a work by Archimedes in which he set out to determine an upper bound for the number of grains of sand that fit into the universe. In order to do this, he had to estimate the size of the universe according to the contemporary model, and invent a way to talk about extremely large numbers. The work, also known in Latin as Archimedis Syracusani Arenarius and Dimensio Circuli, which is about 8 pages long in translation, is addressed to the Syracusan king Gelo II (son of Hiero II), and is probably the most accessible work of Archimedes; in some sense, it is the first research-expository paper. Archimedes died during the Siege of Syracuse when he was killed by a Roman soldier despite orders that he should not be harmed. Cicero describes visiting the tomb of Archimedes, which was surmounted by a sphere and a cylinder, which Archimedes had requested to be placed on his tomb, representing his mathematical discoveries. Unlike his inventions, the mathematical writings of Archimedes were little known in antiquity. Mathematicians from Alexandria read and quoted him, but the first comprehensive compilation was not made until c. 530 AD by Isidore of Miletus in Byzantine Constantinople, while commentaries on the works of Archimedes written by Eutocius in the sixth century AD opened them to wider readership for the first time. The relatively few copies of Archimedes' written work that survived through the Middle Ages were an influential source of ideas for scientists during the Renaissance, while the discovery in 1906 of previously unknown works by Archimedes in the Archimedes Palimpsest has provided new insights into how he obtained mathematical results.

The lifeblood of any business enterprise is its people. Yet it wasn't until the publication of the groundbreaking book *The ROI of Human Capital* that there was a reliable way to quantify the contributions of people to corporate profit. Completely updated with new metrics, the book shows executives and HR professionals how to gauge human costs and productivity at three critical levels: organizational (contributions to corporate goals) • functional (impact on process improvement) • human resources management (value added by five basic HR department activities) The second edition contains new material on topics including corporate outsourcing, developments in behavioral science, and advances in trending and forecasting that have dramatically changed the way organizations measure the bottom line effect of employee performance. Utterly up-to-date, this is the go-to resource for organizations performing the essential task of measuring the value of their people.

From the cofounder of Food Not Bombs, an action-oriented guide to anarchism, social change, and vegan cooking Unlike the original Anarchist Cookbook, which contained instructions for the manufacture of explosives, this version is both a cookbook in the literal sense and also a "cookbook" of recipes for social and political change. The coffee-table-sized book is divided into three sections: a theoretical section explaining what anarchism is and what it isn't; information on organizational principles and tactics for social and political change; and finally, numerous tasty vegan recipes from one of the cofounders of the international Food Not Bombs movement.

The rich history of Egypt has provided famous examples of board games played in antiquity. Each of these games provides evidence of contact between Egypt and its neighbours. From pre-dynastic rule to Arab and Ottoman invasions, Egypt's past is visible on game boards. This volume starts by introducing the reader to board games as well as instruments of chance and goes on to trace the history and distribution of ancient Egyptian games, looking particularly at how they show contact with other cultures and civilizations. Game practices, which were also part of Egyptian rituals and divination, travelled throughout the eastern Mediterranean. This book explores the role of Egypt in accepting and disseminating games during its long history. Over the last few years, the extent and the modes of contact have become better understood through museum and archival research projects as well as surveys of archaeological sites in Egypt and its surrounding regions. The results allow new insight into ancient Egypt's international relations and the role of board games research in understanding its extent. Written by three authors known internationally for their expertise on this topic, this will be the first volume on Ancient Egyptian games of its kind and a much-needed contribution to the field of both Egyptology and board games studies.

Everyone eats, but rarely do we ask why or investigate why we eat what we eat. Why do we love spices, sweets, coffee? How did rice become such a staple food throughout so much of eastern Asia? *Everyone Eats* examines the social and cultural reasons for our food choices and provides an explanation of the nutritional reasons for why humans eat, resulting in a unique cultural and biological approach to the topic. E. N. Anderson explains the economics of food in the globalization era, food's relationship to religion, medicine, and ethnicity as well as offers suggestions on how to end

hunger, starvation, and malnutrition. *Everyone Eats* feeds our need to understand human ecology by explaining the ways that cultures and political systems structure the edible environment.

The first novel in Isaac Asimov's classic science-fiction masterpiece, the Foundation series THE EPIC SAGA THAT INSPIRED THE APPLE TV+ SERIES FOUNDATION • Nominated as one of America's best-loved novels by PBS's The Great American Read For twelve thousand years the Galactic Empire has ruled supreme. Now it is dying. But only Hari Seldon, creator of the revolutionary science of psychohistory, can see into the future—to a dark age of ignorance, barbarism, and warfare that will last thirty thousand years. To preserve knowledge and save humankind, Seldon gathers the best minds in the Empire—both scientists and scholars—and brings them to a bleak planet at the edge of the galaxy to serve as a beacon of hope for future generations. He calls his sanctuary the Foundation. The Foundation novels of Isaac Asimov are among the most influential in the history of science fiction, celebrated for their unique blend of breathtaking action, daring ideas, and extensive worldbuilding. In Foundation, Asimov has written a timely and timeless novel of the best—and worst—that lies in humanity, and the power of even a few courageous souls to shine a light in a universe of darkness.

In 1967, Canada celebrated the 100th anniversary of its founding with a spectacular party, and the whole world was invited. Montreal's Expo 67 was the first world's fair held in Canada, and it was a huge success, attracting over 50 million visitors. The 1,000-acre site was built on two man-made islands in the St. Lawrence River and incorporated 90 futuristic pavilions created by some of the world's greatest architects and designers. Over 60 countries were represented, along with many private, corporate and thematic pavilions, all brought together under the theme "Man and his World." With performers and entertainers of all varieties, restaurants, cultural attractions, exhibitions and a world-class amusement park, Expo 67 was literally the party of the century, exceeding all expectations.

Raman Spectroscopy in Archaeology and Art History highlights the important contributions Raman spectroscopy makes as a non-destructive method for characterising the chemical composition and structure and in determining the provenance and authenticity of objects of archaeological and historical importance. It brings together studies from diverse areas and represents the first dedicated work on the use of this technique in this increasingly important field. Coverage includes: An Introduction to Raman Spectroscopy, including practical aspects of Raman spectroscopy and complementary techniques; Dyes and Pigments; Artefacts; Biological Materials and Degradation; Jewellery and Precious Stones. The book contains a broad selection of real-world examples in the form of case studies to provide the reader with a true appreciation of the procedures that need to be invoked to derive spectroscopic information from some of the most challenging specimens and systems. Colour illustrations of objects of investigation and a database of 72 Raman spectra of relevant minerals are included. With its extensive examples, Raman Spectroscopy in Archaeology and Art History will be of particular interest to specialists in the field, including researchers and scientific/conservation staff in museums. Academics will find it an invaluable reference to the use of Raman spectroscopy.

The fall of the Bastille on July 14, 1789 has become the commemorative symbol of the French Revolution. But this violent and random act was unrepresentative of the real work of the early revolution, which was taking place ten miles west of Paris, in Versailles. There, the nobles, clergy and commoners of France had just declared themselves a republic, toppling a rotten system of aristocratic privilege and altering the course of history forever. The Revolution was led not by angry mobs, but by the best and brightest of France's growing bourgeoisie: young, educated, ambitious. Their aim was not to destroy, but to build a better state. In just three months they drew up a Declaration of the Rights of Man, which was to become the archetype of all subsequent Declarations worldwide, and they instituted a system of locally elected administration for France which still survives today. They were determined to create an entirely new system of government, based on rights, equality and the rule of law. In the first three years of the Revolution they went a long way toward doing so. Then came Robespierre, the Terror and unspeakable acts of barbarism. In a clear, dispassionate and fast-moving narrative, Ian Davidson shows how and why the Revolutionaries, in just five years, spiralled from the best of the Enlightenment to tyranny and the Terror. The book reminds us that the Revolution was both an inspiration of the finest principles of a new democracy and an awful warning of what can happen when idealism goes wrong.

Raman Spectroscopy in Archaeology and Art History G.W. Kent

This is the first English translation of the main contemporary accounts of the Crusade and death of the German Frederick I Barbarossa (ruled 1152-90). The most important of these, the 'History of the Expedition of the Emperor Frederick' was written soon after the events described, and is a

crucial, and under-used source for the Third Crusade (at least in the Anglophone world). The account begins with two letters describing the disaster of Hattin and Saladin's subsequent conquest of most of the Holy Land (the second of these is addressed to the duke of Austria). It goes on to describe how the emperor took the Cross, the preparations and recruitment for the Crusade, the diplomatic contacts of Barbarossa with the Byzantine Emperor and the Sultan of Iconium in an attempt to secure a peaceful passage for the expedition, and the Crusade itself: the journey through the Balkans and the gruelling march through Asia Minor, beset by Turkish attack, until its arrival at Antioch on 21st July 1190, eleven days after the emperor had drowned while crossing a river in Cilician Armenia. The 'History' gives a vivid account of the sufferings of the German army as it traversed Asia Minor. The account of the expedition itself appears to be, or to be based upon an eyewitness record, cast in the form of (often) a daily memoir. However, it concludes with an account of the captivity and release of Richard I in Germany, Henry VI's conquest of the kingdom of Sicily, and of the preparations for a new Crusade under his leadership. In addition, a number of further accounts related to, and expanding, the 'History of the Expedition' have also been translated, including a contemporary newsletter about the death of the emperor, as well as the narrative of Otto of St Blasien, placing the Crusade into context twenty years later, and a contemporary account of the capture of Silves in Portugal by German crusaders on their way to the Holy Land in 1189. This collection is a valuable companion volume to the three other volumes relating to the Third Crusade in this series: The Conquest of Jerusalem and the Third Crusade, trans. Edbury, the Itinerarium Peregrinorum et Gesta Regis Ricardi, trans. Nicholson, and The Rare and Excellent History of Saladin, trans. Richards.
