Malnutrition -- in the form of undernutrition, micronutrient deficiencies, and overweight and obesity - - imposes unacceptably high economic and social costs on countries at all income levels. The causes of malnutrition are complex, yet all forms of malnutrition share one common feature: nutritionally inappropriate diets. The State of Food and Agriculture 2013 makes the case that healthy diets and good nutrition begin with food and agriculture.

The World Bank Group has two overarching goals: End extreme poverty by 2030 and promote shared prosperity by boosting the incomes of the bottom 40 percent of the population in each economy. As this year's Poverty and Shared Prosperity report documents, the world continues to make progress toward these goals. In 2015, approximately one-tenth of the world's population lived in extreme poverty, and the incomes of the bottom 40 percent rose in 77 percent of economies studied. But success cannot be taken for granted. Poverty remains high in Sub-Saharan Africa, as well as in fragile and conflict-affected states. At the same time, most of the world's poor now live in middle-income countries, which tend to have higher national poverty lines. This year's report tracks poverty comparisons at two higher poverty thresholds—\$3.20 and \$5.50 per day—which are typical of standards in lower- and upper-middle-income countries. In addition, the report introduces a societal poverty line based on each economy's median income or consumption. Poverty and Shared Prosperity 2018: Piecing Together the Poverty Puzzle also recognizes that poverty is not only about income and consumption—and it introduces a multidimensional poverty measure that adds other factors, such as access to education, electricity, drinking water, and sanitation. It also explores how inequality within households could affect the global profile of the poor. All these additional pieces enrich our understanding of the poverty puzzle, bringing us closer to solving it. For more

This book assesses the full impact of oil windfalls on six developing producer countries - Algeria, Ecuador, Indonesia, Nigeria, Trinidad and Tobago, and Venezuela. This is the first time that the issue has been systematically analysed and related to economics policies and underlying macroeconomic characteristics. The book adopts a broad approach, blending institutional and political aspects with quantitative analysis which includes the results of sophisticated model simulations. It presents new information on how oil discoveries have been used by producer governments, and analyses of the consequences. Finally it concludes that much of the potential benefit to producers has been dissipated, and explains why producers may actually end up worse off despite revenue gains.

During the 2008 financial crisis, the possible changes in remittance-sending behavior and potential avenues to alleviate a probable decline in remittance flows became concerns. This book brings together a wide array of studies from around the world focusing on the recent trends in remittance flows. The authors have gathered a select group of researchers from academic, practitioner and policy making bodies. Thus the book can be seen as a conversation between the different

stakeholders involved in or affected by remittance flows globally. The book is a first-of-its-kind attempt to analyze the effects of an ongoing crisis on remittance flows globally. Data analyzed by the book reveals three trends. First, The more diversified the destinations and the labour markets for migrants the more resilient are the remittances sent by migrants. Second, the lower the barriers to labor mobility, the stronger the link between remittances and economic cycles in that corridor. And third, as remittances proved to be relatively resilient in comparison to private capital flows, many remittance-dependent countries became even more dependent on remittance inflows for meeting external financing needs. There are several reasons for migration and remittances to be relatively resilient to the crisis. First, remittances are sent by the stock (cumulative flows) of migrants, not only by the recent arrivals (in fact, recent arrivals often do not remit as regularly as they must establish themselves in their new homes). Second, contrary to expectations, return migration did not take place as expected even as the financial crisis reduced employment opportunities in the US and Europe. Third, in addition to the persistence of migrant stocks that lent persistence to remittance flows, existing migrants often absorbed income shocks and continued to send money home. Fourth, if some migrants did return or had the intention to return, they tended to take their savings back to their country of origin. Finally, exchange rate movements during the crisis caused unexpected changes in remittance behavior: as local currencies of many remittance recipient countries depreciated sharply against the US dollar, they produced a "sale" effect on remittance behavior of migrants in the US and other destination countries.
