Pakistan was once only an inspired vision. In 1947, through great sacrifice, a miraculous new nation was born. With its people energised and free, it seemed there was no height Pakistan would not scale. Now, many decades later, as we look back on years of strife, division and poverty cultivated by generations of misguided leaders, we find ourselves wondering how this glorious inheritance became so spoiled. Atif F Qureshi examines the causes of the calamity, in particular the explanation that trumps all others - the import of Western political, legal and economic systems. Detailing why these methods are wholly unworkable for an independent Muslim nation, he examines how Western concepts such as socialism and English Civil Law have led to crises ranging from economic stagnation to terrorist insurgencies. Yet the decline is not irreversible. Qureshi outlines policies that by returning to core Islamic values will revive, rejuvenate and revitalise this beautiful nation. From defence and the environment to education and banking, every aspect of national planning is explored. He shows how in spite of all the travails, Pakistan is well-placed for a glorious future. After

all, a manifest destiny awaits...

In the Guide to the Software Engineering Body of Knowledge (SWEBOK(R) Guide), the IEEE Computer Society establishes a baseline for the body of knowledge for the field of software engineering, and the work supports the Society's responsibility to promote the advancement of both theory and practice in this field. It should be noted that the Guide does not purport to define the body of knowledge but rather to serve as a compendium and guide to the knowledge that has been developing and evolving over the past four decades. Now in Version 3.0, the Guide's 15 knowledge areas summarize generally accepted topics and list references for detailed information. The editors for Version 3.0 of the SWEBOK(R) Guide are Pierre Bourque (Ecole de technologie superieure (ETS), Universite du Quebec) and Richard E.
