ERAU Electric Aircraft Reaches Milestone - AVweb Electric Aircraft Technology Embry-Riddle Aeronautical University's "eSpirit" electric aircraft has reached the taxi-test stage after four years of development. The Diamond HK-36-based project, dubbed eSpirit of St. Louis as a nod to Charles Lindbergh's "notion of balance between aviation and the environment," is a testbed for students and faculty to develop a unique electric propulsion system. ERAU Electric Aircraft Reaches Milestone - AVweb You

might think that electric cars didn't really exist until Tesla hit the scene with its sporty Roadster around 2008. The reality is that the first electric vehicle was invented way, way back in the 1830s when a Scottish inventor came up with an electric carriage powered by non-rechargeable primary cells. Of course, it took advances in technology, legislation, and higher fuel prices to spur ... You might think that electric cars didn't really exist until Tesla hit the scene with its sporty Roadster around 2008.
