Literature has not always been written in the same ways, nor has it been received or read in the same ways over the course of Western civilization. Cavallo (Greek palaeography, U. of Rome La Sapienza), Chartier (Ecole des Hautes Etudes en Sciences Sociales, Paris) and a number of other international contributors, address themes that highlight the transformation of reading methods and materials over the ages, such as the way texts in the Middle Ages were often written with the voice in mind, as they would have been read aloud, or even sung. Articles explore the innovations in the physical evolution of the book, as well as the growth and development of a broad-based reading public.

Hermeneutic phenomenology is a combination of theory, reflection and practice that interweaves vivid descriptions of lived experience (phenomenology) together with reflective interpretations of their meanings (hermeneutics). This method is popular among researchers in education, nursing and other caring and nurturing practices and professions. Practical and adaptable, it can be at the same time poetic and evocative. As this collection shows, hermeneutic phenomenology gives voice to everyday aspects of educational practice – particularly emotional, embodied and empathic moments– that may be all too easily overlooked in other research approaches. By explicating, illustrating and demonstrating hermeneutic phenomenology as a method for research in education

specifically, this book offers an excellent resource for beginning as well as more advanced researchers.

The present work is an attempt to give in one volume the main features of Spanish history from the standpoint of America. It should serve almost equally well for residents of both the English-speaking and the Spanish American countries, since the underlying idea has been that Americans generally are concerned with the growth of that Spanish civilization which was transmitted to the new world. One of the chief factors in American life today is that of the relations between Anglo-Saxon and Hispanic America. They are becoming increasingly important. The southern republics themselves are forging ahead; on the other hand many of them are still dangerously weak, leaving possible openings for the not unwilling old world powers; and some of the richest prospective markets of the globe are in those as yet scantily developed lands. The value of a better understanding between the peoples of the two Americas, both for the reasons just named and for many others, scarcely calls for argument. It is almost equally clear that one of the essentials to such an understanding is a comprehension of Spanish civilization, on which that of the Spanish American peoples so largely depends. That information this volume aims to provide.

Max van Manen offers an extensive exploration of phenomenological traditions and methods for the human sciences. It is his first comprehensive statement of phenomenological thought and research in over a decade. Phenomenology of practice refers to the meaning and practice of phenomenology in professional contexts such as psychology, education, and health care, as well as to the practice of phenomenological methods in contexts of everyday living. Van Manen presents a detailed description of key phenomenological ideas as they have evolved over the past century; he then thoughtfully works through the methodological issues of phenomenological reflection, empirical methods, and writing that a phenomenology of practice offers to the researcher. Van Manen's comprehensive work will be of great interest to all concerned with the interrelationship between being and acting in human sciences research and in everyday life. Max van Manen is the editor of the series Phenomenology of Practice, <https://www.routledge.com/series/PPVM>

Confronting the Shadow Education System United Nations Educational

This book focuses on the so-called shadow education system of private supplementary tutoring. In parts of East Asia it has long existed on a large scale and it is now becoming increasingly evident in other parts of Asia and in Africa, Europe and North America. Pupils commonly receive fee-free education in public schools and then at the end of the day and/or during week-ends and vacations supplementary tutoring in the same subjects on a fee-paying basis. Supplementary private tutoring can have positive dimensions. It helps students to cover the curriculum, provides a structured occupation for pupils outside school hours, and provides incomes for the tutors. However, tutoring may also have negative dimensions. If left to market forces, tutoring is likely to maintain and increase social inequalities, and it can create excessive pressure for young people who have inadequate time for non-academic activities. Especially problematic are situations in which school teachers provide extra tutoring in exchange for fees from their regular pupils. This book begins by surveying the scale, nature and implications of the shadow education system in a range of settings. It then identifies possible government responses to the phenomenon and encourages a proactive approach to designing appropriate policies.

Pedagogical Tact describes how teacher-student relations possess an improvisational and ethical character. The daily realities of educators, parents, and childcare specialists are pedagogically

conditioned by sensitive insights, active thoughtfulness, and the creative ability to act caringly and appropriately in the immediacy of the moment. Internationally known educator Max van Manen shows through recognizable examples and evocative stories how good teaching is driven by the phenomenology of pedagogy. His book-refocuses educators and others away from an emphasis on instrumental skills and technocratic programs toward the need for pedagogical tact;-describes how pedagogical actions have latent effects that will influence children throughout their lives;-shows how our actions with young people have pedagogically ethical and moral significance;-gives educators back their original vocational motivation and inspiration.

For more than 25 years the Peabody Museum has been publishing The Corpus of Maya Hieroglyphic Inscriptions under the editorial and artistic direction of Mayanist Ian Graham. The goal of this unique series of folio volumes is to document in photographs and detailed line drawings all known Maya inscriptions and their associated figurative art. When complete, the Corpus will have published the inscriptions from over 200 sites and 2,000 monuments. The series has been instrumental in the remarkable success of the ongoing process of deciphering Maya writing, making available hundreds of texts to epigraphers working around the world. Each volume in the series consists of three fascicles, which examine an individual site or group of neighboring sites and include maps of site location and plans indicating the placement of monuments within each site. Each inscription is reproduced in its entirety in both photographs and line drawings. The text of each volume presents descriptive information about the sites and monuments and their associated artifacts. -- Publisher's description.

"Over the past decade there has been substantial progress in understanding Maya hieroglyphic writing. This development led to the reconstruction of Classic Maya (AD 300-900) political history. Epigraphers suggested a major influence of Teotihuacan during the Early Classic Period (AD 300-600), and some even argued for a direct Teotihuacan conquest of the Maya lowlands. The Late Classic Period (AD 600-900) was interpreted as a constant hegemonic struggle between Tikal and Calakmul, which in different ways influenced Classic Maya political relations. These reconstructions of political history were directly tied to the interpretations of political organisation, ranging from peer polity interaction models to more bureaucratic polities. In this work the author examines and

analyses inscriptions from the Western Maya Region, which are especially rich in information concerning interaction of polities and interpolity organisation. The author reconstructs the historical development of the region, examining the influence of Teotihuacan and that of the hegemonic states Tikal and Calakmul."--Publisher's website.

2012 marks the 63rd anniversary of the Nakba - the most traumatic catastrophe that ever befell Palestinians. This book explores new ways of remembering and commemorating the Nakba. In the context of Palestinian oral history, it explores 'social history from below', subaltern narratives of memory and the formation of collective identity. Masalha argues that to write more truthfully about the Nakba is not just to practise a professional historiography but an ethical imperative. The struggles of ordinary refugees to recover and publicly assert the truth about the Nakba is a vital way of protecting their rights and keeping the hope for peace with justice alive. This book is essential for understanding the place of the Palestine Nakba at the heart of the Israel-Palestine conflict and the vital role of memory in narratives of truth and reconciliation.

With formal ethics education programmes being a rarity in most countries' armed forces, there is a growing importance for servicemen to undergo additional military ethics training. But how do we ensure that soldiers learn the right lessons from it? Furthermore, how can we achieve a uniformity of approach? The current lack of uniformity about what constitutes ethical behaviour and how troops should be educated in it is potentially a cause for serious alarm. This book advances knowledge and understanding of the issues associated with this subject by bringing together experts from around the world to analyze the content, mode of instruction, theoretical underpinnings, and the effect of cultural and national differences within current ethics programmes. It also explores whether such programmes are best run by military officers, chaplains or academic philosophers, and reflects whether it is feasible to develop common principles and approaches for the armed forces of all Western countries. This is an invaluable volume for military academies and staff colleges to enhance understanding of a matter which requires much further thought and which is becoming a vital force in influencing outcomes on the battlefields of the twenty-first century. The book will primarily be of interest to military officers and others directly involved in ethics education in the military, as well as to philosophers and students of military affairs.

This volume discusses the theoretical fundamentals and potential applications of the original electro-Fenton (EF) process and its most innovative and promising versions, all of which are classified as electrochemical advanced oxidation processes. It consists of 15 chapters that review the latest advances and trends, material selection, reaction and reactor modeling and EF scale-up. It particularly focuses on the applications of EF process in the treatment of toxic and persistent organic pollutants in water and soil, showing highly efficient removal for both lab-scale and pre-pilot setups. Indeed, the EF technology is now mature enough to be brought to market, and this collection of contributions from leading experts in the field constitutes a timely milestone for scientists and engineers.
