Chemoprevention of cancer | Carcinogenesis | Oxford Academic

Research Article Cancer Prevention
 Chemoprevention Targeted therapies have affected the course of cancer treatments, but they have yet to be widely used as agents for chemoprevention. Over the past few years, preclinical studies have repeatedly shown that inhibition of mammalian target of rapamycin (mTOR) signaling may prevent cancer progression. mTOR is a serine/threonine kinase that serves as a central regulator of cellular growth, a ...
 Chemoprevention Meets Glucose Control | Cancer Prevention ...
 Cancer vaccines have shown evidence of efficacy in controlled trials, and the type of immune response to a cancer vaccine that will be needed for cancer prevention is becoming increasingly known. It is time to focus on cancer vaccines as cancer prevention agents with a high likelihood of success.
 The Ultimate in Cancer Chemoprevention: Cancer Vaccines ...
 Cancer begins when healthy cells change and grow uncontrollably. This forms a mass called a tumor. The process of a healthy cell becoming a cancerous one usually takes years. And many genetic, dietary, and lifestyle factors, such as smoking, may influence this process.
 Cancer chemoprevention uses substances to stop cancer from developing. These substances may be natural or made
 Chemoprevention | Cancer.Net
 Potential value of chemoprevention. The potential impact that chemoprevention could have on the death rate from cancer is evident from the way this approach has transformed the incidence of cardiovascular disease (Hansson, 2005).
 The introduction of drugs that suppress cholesterol synthesis, modify platelet aggregation or lower blood pressure has led to a steady fall in heart disease over the ...
 Cancer chemoprevention: a rapidly evolving field
 Research above explains the importance of glucose consumption to cancer cells and therefore glucose transporters (GLUTs) have also become ideal targets for cancer prevention. Wu et al. (2018) demonstrated that apple polyphenol phloretin acted as a specific inhibitor of GLUT2 and led to cell cycle arrest and anti-proliferation in the breast cancer cell line, MDA-MB-231, but not in a normal cell ...
 Recent advances in cancer chemoprevention with ...
 Introduction. Cancer is a public health burden that is predicted to be diagnosed in excess of 1.6 million new cases and results in more than 585,000 deaths in the United States in 2014.
 1 An ever-increasing understanding of cancer cell pathobiology has led to a molecular approach in treating neoplasms and reducing cancer mortality rates. These advances have also been instrumental in developing ...
 Cancer Chemoprevention: Current State of the Art
 Abstract. In this short article, we review the conceptual basis for chemoprevention of cancer, the proven clinical efficacy of this concept, and current trends to develop new chemopreventive agents based on understanding of their mechanisms of action.
 Chemoprevention of cancer | Carcinogenesis | Oxford Academic
 Chemoprevention is a word now used extensively among both researchers and clinicians. Sporn's coining of the term was integral to solidifying the concept of chemoprevention as an important area of research in the prevention of human cancer, said Peter Greenwald, M.D., Dr.P.H., chief of the NCI's Division of Cancer Prevention. "The idea of ...

 Background: Clinical and cohort

studies have shown that low-dose aspirin and calcium are effective low-risk strategies for primary prevention of colorectal cancer (CRC). We compared the cost-effectiveness of aspirin and calcium chemoprevention used with colonoscopy for primary prevention of CRCs. Methods: Markov chain Monte Carlo simulations for a population of 100,000 persons, with a ...
 Combination Aspirin and/or Calcium Chemoprevention with ...
 Conclusions: Treatment with PPE and erlotinib combination was well tolerated in patients with APLs of the head and neck, and showed a high rate of pathologic response with excellent CFS. This combination deserves further investigation for the chemoprevention and/or prevention of second primary tumors in early-stage head and neck cancer.
 Phase Ib Study of Chemoprevention with Green Tea ...
 Cancer chemoprevention involves the chronic administration of a synthetic, natural or biological agent to reduce or delay the occurrence of malignant tumour. The potential value of this approach has been demonstrated with trials in breast, prostate and colon cancer.
 Chemoprevention | List of High Impact Articles | PPTs ...
 Colorectal cancer is the third most common cancer worldwide,¹ with annual healthcare costs in the United States alone estimated to be over \$14bn (£11bn; €13bn).² Over 85% of sporadic colorectal cancers arise from advanced adenomas.³ Colonoscopic screening with resection of adenomatous polyps has been associated with a reduction in mortality, and this is the preferred approach for preventing ...
 Chemoprevention of colorectal cancer in individuals with ...
 Chemoprevention of cancer is a means of cancer control in which the occurrence of this disease, as a consequence of exposure to carcinogenic agents, can be entirely prevented, slowed, or reversed by the administration of one or several naturally occurring or synthetic agents. Thus, the chemopreventi ...
 Skin Cancer Chemoprevention
 Elmets CA, Viner JL, Pentland AP, et al. Chemoprevention of nonmelanoma skin cancer with celecoxib: a randomized, double-blind, placebo-controlled trial. *J Natl Cancer Inst* 2010 ;102: 1835 - 1844 ...
 A Phase 3 Randomized Trial of Nicotinamide for Skin-Cancer ...
 In this article, we review the current evidence for the use of these and other agents for the chemoprevention of colorectal cancer, together with theories as to their possible mechanisms of action.
 Review article: chemoprevention of colorectal cancer ...
 Cancer prevention is action taken to lower the chance of getting cancer. By preventing cancer, the number of new cases of cancer in a group or population is lowered. Hopefully, this will lower the number of deaths caused by cancer. Cancer is not a single disease but a group of related diseases.
 Cancer Prevention: Facts About Diet and Lifestyle
 Public and private sector interests involving academic research, professional medical and commercial pharmaceutical groups, aided by patient advocacy groups, need to work with the Food and Drug Administration to identify paths to implement cancer chemoprevention strategies into the standard practice of managing patients with high risk of colon and other cancers.
 Cancer vaccines have shown evidence of efficacy in controlled trials, and the type of immune response to a cancer vaccine that will be needed for cancer prevention is becoming increasingly known. It is time to focus on cancer vaccines as cancer chemoprevention agents with a high likelihood of success.
