The Neanderthals Rediscovered: How Modern Science Is Rewriting Their Story (The Rediscovered Series) Random House

Based on his life's research, Robert Ornstein provides a look at the evolution of the mind. He explains that we are not rational but adaptive, and that it is Darwin, not Freud, who is the central scientist of the brain. Our minds have evolved to help us survive, not to reason. At the same time, our individual worlds have developed our minds and destroyed many of our natural abilities. The Neandertals CRC Press

New York Times Readers' Pick: Top 100 Books of the 21st Century
New York Times Bestseller A Summer Reading Pick for President Barack Obama, Bill Gates, and Mark Zuckerberg From a renowned historian comes a groundbreaking narrative of humanity's creation and evolution—a #1 international bestseller—that explores the ways in which biology and history have defined us and enhanced our understanding of what it means to be “human.” One hundred thousand years ago, at least six different species of humans inhabited Earth. Yet today there is only one—homo sapiens. What happened to the others? And what may happen to us? Most books about the history of humanity pursue either a historical or a biological approach, but Dr. Yuval Noah Harari breaks the mold with this highly original book that begins about 70,000 years ago with the appearance of modern cognition. From examining the role evolving humans have played in the global ecosystem to charting the rise of empires, *Sapiens* integrates history and science to reconsider accepted narratives, connect past developments with contemporary concerns, and examine specific events within the context of larger ideas. Dr. Harari also compels us to look ahead, because over the last few decades humans have begun to bend laws of natural selection that have governed life for the past four billion years. We are acquiring the ability to design not only the world around us, but also ourselves. Where is this leading us, and what do we want to become? Featuring 27 photographs, 6 maps, and 25

illustrations/diagrams, this provocative and insightful work is sure to spark debate and is essential reading for aficionados of Jared Diamond, James Gleick, Matt Ridley, Robert Wright, and Sharon Moalem.

2012: A Clarion Call Univ of California Press

Argues that alien beings sent from another world to lead the Earth into a new golden age are living among us, and that many of them are unaware of their true nature

Robo Sapiens Japonicus Springer Science & Business Media
In 1856 - as Darwin was completing *Origin of Species* - the fossilized remains of a stocky, powerful human-like creature were discovered in a cave in the Neander Valley in Germany. This work offers an account of the search for man's beginnings and out of a particular man - dead for 40, 000 years - who began a revolution that changed the world.

Lewis' Dictionary of Toxicology Penguin UK

The first volume of the graphic adaptation of Yuval Noah Harari's global phenomenon and smash SUNDAY TIMES #1 BESTSELLER. Featuring 256 pages of gorgeous full-colour illustrations and wrapped in a beautiful package. One hundred thousand years ago, at least six different species of humans inhabited Earth. Yet today there is only one-homo sapiens. What happened to the others? And what may happen to us? In this first volume of the adaptation of his ground-breaking book, renowned historian Yuval Harari tells the story of humankind's creation and evolution, exploring the ways in which biology and history have defined us and enhanced our understanding of what it means to be “human”. From examining the role evolving humans have played in the global ecosystem to charting the rise of empires, *Sapiens* challenges us to reconsider accepted beliefs, connect past developments with contemporary concerns, and view specific events within the context of larger ideas. Featuring easy-to-understand text covering the first part of the original edition, this adaptation of the mind-expanding book furthers the ongoing conversation as it introduces Harari's ideas to a wider new readership. '[A] wonderful graphic novel... Smart, funny and dipped deep in the reality of what we as a species are...' Big Issue
Books of the Year

A Life on Our Planet Open SUNY Textbooks

A renowned biologist provides a sweeping chronicle of more than four billion years of life on Earth, shedding new light on evolutionary theory and history, sexual selection, speciation, extinction, and genetics.

The Waterside Ape Taylor & Francis Group

This reference contains a staggering number of well-researched and commonly used terms from toxicology and related fields. Scientists from virtually every environmentally oriented field, from chemistry to nursing to agriculture, will find what they need in this dictionary. It features vast coverage of terms, from chemical names and pathogenic terms to official abbreviations, environmental topics, and biological definitions. Each entry categorizes all major definitions and usage, with extensive cross-references for synonyms and related entries. Including nearly every major technical toxicological term as applied to both human and environmental studies, *Lewis' Dictionary of Toxicology* is broader and more comprehensive than any other to date. It is based on terms found in more than 600 journals, 15,000 reprints of scientific papers, and numerous leading reference sources.

Evolution Texas A&M University Press

Can we trust our senses to tell us the truth? Challenging leading scientific theories that claim that our senses report back objective reality, cognitive scientist Donald Hoffman argues that while we should take our perceptions seriously, we should not take them literally. From examining why fashion designers create clothes that give the illusion of a more “attractive” body shape to studying how companies use color to elicit specific emotions in consumers, and even dismantling the very notion that spacetime is objective reality, *The Case Against Reality* dares us to question everything we thought we knew about the world we see.

Bones of Contention Princeton University Press

From the author of No.1 international bestseller *Collapse*, a mesmerizing portrait of the human past that offers profound lessons for how we can live today Visionary, prize-winning author Jared Diamond changed the way we think about the rise and fall of human civilizations with his previous international bestsellers *Guns, Germs and Steel* and *Collapse*. Now he returns with another

epic - and groundbreaking - journey into our rapidly receding past. In *The World Until Yesterday*, Diamond reveals how traditional societies around the world offer an extraordinary window onto how our ancestors lived for the majority of human history - until virtually yesterday, in evolutionary terms - and provide unique, often overlooked insights into human nature. Drawing extensively on his decades working in the jungles of Papua New Guinea, Diamond explores how tribal societies approach essential human problems, from childrearing to conflict resolution to health, and discovers we have much to learn from traditional ways of life. He unearths remarkable findings - from the reason why modern afflictions like diabetes, obesity and Alzheimer's are virtually non-existent in tribal societies to the surprising benefits of multilingualism. Panoramic in scope and thrillingly original, *The World Until Yesterday* provides an enthralling first-hand picture of the human past that also suggests profound lessons for how to live well today. Jared Diamond is the Pulitzer Prize-winning author of the seminal million-copy-bestseller *Guns, Germs, and Steel*, which was named one of TIME's best non-fiction books of all time, and *Collapse*, a #1 international bestseller. A professor of geography at UCLA and noted polymath, Diamond's work has been influential in the fields of anthropology, biology, ornithology, ecology and history, among others.

The Syntellect Hypothesis Baker Books

Goodreads Choice Award Winner for Best Science & Technology Book of the Year In this scientifically informed account of the changes occurring in the world over the last century, award-winning broadcaster and natural historian shares a lifetime of wisdom and a hopeful vision for the future. See the world. Then make it better. I am 93. I've had an extraordinary life. It's only now that I appreciate how extraordinary. As a young man, I felt I was out there in the wild, experiencing the untouched natural world - but it was an illusion. The tragedy of our time has been happening all around us, barely noticeable from day to day -- the loss of our planet's wild places, its biodiversity. I have been witness to this decline. *A Life on Our Planet* is my witness statement, and my vision for the future. It is the story of how we came to make this, our greatest mistake -- and how, if we act now, we can yet put it right. We have one final chance to create the perfect home for ourselves and restore the wonderful world

we inherited. All we need is the will to do so.

The African Origin of Civilization Simon and Schuster

Fe-S Cluster Enzymes, Part A, Volume 595 is the first of two volumes focused on Fe-S cluster enzymes. New topics of note in this series include Electrochemistry of Fe/S Proteins, Genetic, biochemical and biophysical methods for studying Fe-S proteins and their assembly, Fluorescent reporters to track Fe-S cluster assembly and transfer reactions, Mechanism-based strategies for structural characterization of radical SAM reaction intermediates, Purification and Characterization of Recalcitrant Cobalamin-Dependent Radical S-adenosylmethionine Methylases, A polymerase with potential: the Fe-S cluster in Human DNA Primase, In Vitro Studies of Cellular Iron-sulfur Cluster Biosynthesis, Trafficking and Transport, and Fe-S cluster Hsp70 Chaperones: the ATPase cycle and protein interactions. - Contain contributions from leading authorities on enzymology - Informs and updates on all the latest developments in the field *Sapiens A Graphic History, Volume 1* Thames & Hudson Japan is arguably the first postindustrial society to embrace the prospect of human-robot coexistence. Over the past decade, Japanese humanoid robots designed for use in homes, hospitals, offices, and schools have become celebrated in mass and social media throughout the world. In *Robo sapiens japonicus*, Jennifer Robertson casts a critical eye on press releases and public relations videos that misrepresent robots as being as versatile and agile as their science fiction counterparts. An ethnography and sociocultural history of governmental and academic discourse of human-robot relations in Japan, this book explores how actual robots—humanoids, androids, and animaloids—are “imagineered” in ways that reinforce the conventional sex/gender system and political-economic status quo. In addition, Robertson interrogates the notion of human exceptionalism as she considers whether “civil rights” should be granted to robots. Similarly, she juxtaposes how robots and robotic exoskeletons reinforce a conception of the “normal” body with a deconstruction of the much-invoked Theory of the Uncanny Valley.

Sapiens: A Graphic History, Volume 2 Macmillan

Where did we come from? What were our ancestors like? Why do we differ from other animals? How do scientists trace and construct our evolutionary history? *The Evolution of Our Tribe: Hominini* provides answers to these questions and more. The

book explores the field of paleoanthropology past and present. Beginning over 65 million years ago, Welker traces the evolution of our species, the environments and selective forces that shaped our ancestors, their physical and cultural adaptations, and the people and places involved with their discovery and study. It is designed as a textbook for a course on Human Evolution but can also serve as an introductory text for relevant sections of courses in Biological or General Anthropology or general interest. It is both a comprehensive technical reference for relevant terms, theories, methods, and species and an overview of the people, places, and discoveries that have imbued paleoanthropology with such fascination, romance, and mystery.

Encyclopedia of Human Evolution and Prehistory HarperCollins

Now a major motion picture: *Love, Simon*, starring Nick Robinson and Katherine Langford! This edition includes new Simon and Blue emails, a behind-the-scenes scrapbook from the *Love, Simon* movie set, and Becky Albertalli in conversation with fellow authors Adam Silvera and Angie Thomas. William C. Morris Award Winner: Best Young Adult Debut of the Year * National Book Award Longlist "A remarkable gift of a novel."—Andrew Smith, author of *Grasshopper Jungle* "I am so in love with this book."—Nina LaCour, author of *Hold Still* "Feels timelessly, effortlessly now."—Tim Federle, author of *Better Nate Than Ever* "The best kind of love story."—Alex Sanchez, Lambda Award-winning author of *Rainbow Boys* and *Boyfriends with Girlfriends* Sixteen-year-old and not-so-openly gay Simon Spier prefers to save his drama for the school musical. But when an email falls into the wrong hands, his secret is at risk of being thrust into the spotlight. Now change-averse Simon has to find a way to step out of his comfort zone before he's pushed out—without alienating his friends, compromising himself, or fumbling a shot at happiness with the most confusing, adorable guy he's never met. Incredibly funny and poignant, this twenty-first-century coming-of-age, coming out story—wrapped in a geek romance—is a knockout of a debut novel by Becky Albertalli. Plus don't miss *Yes No Maybe So*, Becky Albertalli's and Aisha Saeed's heartwarming and hilarious new novel, coming in 2020!

Sapiens: a Graphic History Harper Collins

"Even-handed, up-to-date, and clearly written. . . . If you want to navigate between the Scylla and Charybdis of Neanderthal controversies, you'll find no better guide." —Brian Fagan, author

of Cro-Magnon In recent years, the common perception of the Neanderthal has been transformed thanks to new discoveries and paradigm-shattering scientific innovations. It turns out that the Neanderthals' behavior was surprisingly modern: they buried the dead, cared for the sick, hunted large animals in their prime, harvested seafood, and spoke. Meanwhile, advances in DNA technologies have forced a reassessment of the Neanderthals' place in our own past. For hundreds of thousands of years, Neanderthals evolved in Europe very much in parallel to the Homo sapiens line evolving in Africa, and, when both species made their first forays into Asia, the Neanderthals may even have had the upper hand. Here, Dimitra Papagianni and Michael A. Morse look at the Neanderthals through the full dramatic arc of their existence—from their evolution in Europe to their expansion to Siberia, their subsequent extinction, and ultimately their revival in popular novels, cartoons, cult movies, and TV commercials.

Homo Deus Columbia University Press

The hominin fossil record documents a history of critical evolutionary events that have ultimately shaped and defined what it means to be human, including the origins of bipedalism; the emergence of our genus Homo; the first use of stone tools; increases in brain size; and the emergence of Homo sapiens, tools, and culture. The Earth's geological record suggests that some evolutionary events were coincident with substantial changes in African and Eurasian climate, raising the possibility that critical junctures in human evolution and behavioral development may have been affected by the environmental characteristics of the areas where hominins evolved. Understanding Climate's Change on Human Evolution explores the opportunities of using scientific research to improve our understanding of how climate may have helped shape our species. Improved climate records for specific regions will be required before it is possible to evaluate how critical resources for hominins, especially water and vegetation, would have been distributed on the landscape during key intervals of hominin history. Existing records contain substantial temporal gaps. The book's initiatives are presented in two major research themes: first, determining the impacts of climate change and climate variability on human evolution and dispersal; and second, integrating climate modeling, environmental records, and biotic

responses. Understanding Climate's Change on Human Evolution suggests a new scientific program for international climate and human evolution studies that involve an exploration initiative to locate new fossil sites and to broaden the geographic and temporal sampling of the fossil and archeological record; a comprehensive and integrative scientific drilling program in lakes, lake bed outcrops, and ocean basins surrounding the regions where hominins evolved and a major investment in climate modeling experiments for key time intervals and regions that are critical to understanding human evolution.

The Upside of Unrequited W. W. Norton & Company

Why are humans so fond of water? Why is our skin colour so variable? Why aren't we hairy like our close ape relatives? A savannah scenario of human evolution has been widely accepted primarily due to fossil evidence; and fossils do not offer insight into these questions. Other alternative evolutionary scenarios might, but these models have been rejected. This book explores a controversial idea - that human evolution was intimately associated with watery habitats as much or more than typical savannahs. Written from a medical point of view, the author presents evidence supporting a credible alternative explanation for how humans diverged from our primate ancestors. Anatomical and physiological evidence offer insight into hairlessness, different coloured skin, subcutaneous fat, large brains, a marine-type kidney, a unique heat regulation system and speech. This evidence suggests that humans may well have evolved, not just as savannah mammals, as is generally believed, but with more affinity for aquatic habitats - rivers, streams, lakes and coasts. Key Features: Presents the evidence for a close association between riparian habitats and the origin of humans Reviews the "savannah ape" hypothesis for human origins Describes various anatomical adaptations that are associated with hypotheses of human evolution Explores characteristics from the head and neck such as skull and sinus structures, the larynx and ear structures and functions

Sapiens: A Graphic History National Academies Press

From the award-winning author of *Simon vs. the Homo Sapiens Agenda* comes a funny, authentic novel about sisterhood, love, and identity. "Heart-fluttering, honest, and hilarious. I can't stop hugging this book." (Stephanie Perkins, New York Times bestselling author of *Anna and the French Kiss*) "I have such a

crush on this book! Not only is this one a must read, but it's a must re-read." (Julie Murphy, New York Times bestselling author of *Dumplin'*) Seventeen-year-old Molly Peskin-Suso knows all about unrequited love. No matter how many times her twin sister, Cassie, tells her to woman up, Molly can't stomach the idea of rejection. So she's careful. Fat girls always have to be careful. Then a cute new girl enters Cassie's orbit, and for the first time ever, Molly's cynical twin is a lovesick mess. Meanwhile, Molly's totally not dying of loneliness - except for the part where she is. Luckily, Cassie's new girlfriend comes with a cute hipster-boy sidekick. If Molly can win him over, she'll get her first kiss and she'll get her twin back. There's only one problem: Molly's coworker, Reid. He's a chubby Tolkien superfan with a season pass to the Ren Faire, and there's absolutely no way Molly could fall for him. Right?

Physician's Guide to the Diagnosis, Treatment, and Follow-Up of Inherited Metabolic Diseases Random House

A step-by-step guide to creating a sustainable global shift in consciousness starting with an inner-world shift at the personal level • Provides psychological and spiritual exercises to heal deep trauma imprints, raise your vibration, and realign with your soul's higher purpose • Identifies the signs and symptoms of the 12 stages of ascension as we approach the global spiritual awakening of 2012 • Offers an in-depth overview of 2012 prophecies foretelling of humanity's arrival at a point of no return on the Winter Solstice of 2012 as well as guidance in preparing for the New World prophesied to emerge in 2013 According to ancient Mayan prophecy, December 21, 2012, marks the moment of humanity's rise or fall. Our "rise" depends on higher consciousness and raised vibration as well as the expanded awareness of a critical mass of people. As humanity enters the evolutionary transition from Homo sapiens to Homo luminous--from 3rd-dimensional human beings to 5th-dimensional beings of light--we are being called to fully participate in the dawn of a New World built upon unconditional love, co-support, cooperation, equality, unity, peace, justice, and sustainability. Sounding the clarion call for a global shift in consciousness starting at a personal level, Nicolya Christi presents a step-by-step guide to healing and transforming your inner world--an essential step toward co-creating a world shift as we head toward the tipping point of 2012. She offers core psychological insights and

exercises, spiritual teachings, guided visualizations, and a concise overview of the spiritual and astronomical events surrounding 2012, as well as identifying the signs and symptoms of the 12 different stages of ascension, a process that millions are currently experiencing as we approach the global spiritual awakening of 2012. She explains how to clear past-life, ancestral, and current

trauma imprints lodged within your energy field to accelerate the process of conscious evolution and ascension. Revealing that many people chose to reincarnate in this lifetime as “midwives” to help birth the New World, this book provides a way to rediscover your soul’s higher purpose, thus serving your own evolutionary journey as well as that of the Earth.
