ACM ICPC World Finals 2010 - KTH Acm Icpc Problems SolutionsThe International Collegiate Programming Contest is an algorithmic programming contest for college students. Teams of three, representing their university, work to solve the most real-world problems, fostering collaboration, creativity, innovation, and the ability to perform under pressure. Through training and competition, teams challenge each other to raise the bar on the possible.The ICPC International Collegiate Programming ContestFinding the optimal cost of doing so is the actual problem we are solving here. I'm doing that later using the min cost matching, others are doing it using the mincost maxflow. In the part of my solution you are quoting I'm just computing the cost of one special case: the one where each party is served by a different team.ACM-ICPC World Finals Problems Solutions - CodeforcesACM ICPC World Finals 2017 Solution sketches Disclaimer This is an unofficial analysis of some possible ways to solve the problems of the ACM ICPC World Finals 2017. They are not intended to give a complete solution, but rather to outline some approach that can be used to solve the problem. If some of the terminology or algorithms mentionedACM ICPC World Finals 2017This hackerrank problem is a part of Problem Solving | Practice | Algorithms | Implementation | ACM ICPC Team and solved in python. The complexity of this solution is $O(n^2 * k)$.
