Each Haynes manual provides specific and detailed instructions for performing everything from basic maintenance and troubleshooting to a complete overhaul of the machine, in this case the Honda CBR1000RR Fireblade, model years 2004 through 2007. Do-it-yourselfers will find this service and repair manual more

comprehensive than the factory manual, making it an indispensable part of their tool box. A typical Haynes manual covers: general information; troubleshooting; lubrication and routine maintenance; engine top end; engine lower end; primary drive, clutch and external shift mechanism; transmission and internal shift mechanism; engine management system; electrical system; wheels, tires and drivebelt; front suspension and steering; rear suspension; brakes; body, and color wiring diagrams. An index makes the manual easy to navigate.

Helen Lloyd went to Iceland via the Faroe Islands and found freedom and adventure riding her old Yamaha Serow motorbike, tackling the rough trails and deep river crossings past glaciers and volcanoes. Despite killer sheep, cold winds and driving rain, Iceland's steaming hot pools, strong coffee and generous people melt snow and warm hearts.

The Japanese serow (*Capricornis crispus*)

has been protected by law since 1955 in Japan, because it was becoming rarer and approaching extinction. Thereafter, the serow population has increased gradually. The Japanese serow is thought to be a primitive relict species on the islands of Japan, and the geographical range of the serow has retracted upwards into the mountain forests to avoid contact with humans. Little was therefore known about these animals. However, increasing losses of forest habitat due to exploitation of the mountain forests or expanding cultivation by local foresters have driven the Japanese serow back into the lowlands of Japan. Since then, complaints of damage to trees and other vegetation have accumulated against the serow. In some prefectures the shooting of Japanese serow was allowed in order to prevent damage to forests. The animals killed were taken for research by the Departments of the Environment and by universities. A center was set up at the summit of Mt. Gozaisho, The Japan Serow Center Komono-cho, Mie Prefecture, in 1962 and has made a great effort to breed the serow and its related species in captivity. In addition, the International Studbook of Capricorn is

crispus in captivity was established in Japan, and the state of breeding of the Japanese serows is now reported annually. However, without detailed scientific research, it is impossible to conduct sensible protection, conservation or management of the serow in captivity or in the wild.

WHAT DO KATY PERRY AND THE high school cheerleader next door have in common? Braces. Braces are dental appliances used to straighten a person's teeth and correct unhealthy overbites or under-bites. Braces are usually worn by kids 10 to 14 years old, but many adults wear braces - even celebrities. In fact, of the four million people in the US who wear braces, one million are adults. Most of the time braces are used for cosmetic reasons. Everyone wants a beautiful smile, but it is not always a matter of vanity. Crooked teeth and misaligned jaws can cause serious health problems. Teeth that do not fit together right are harder to clean, making the person more at risk for tooth decay, periodontal disease, and even lost teeth. Crooked teeth can also create stress on the jaw and facial muscles that leads to headaches, TMJ syndrome, and pain in the neck, shoulders, or back. When the need for braces is indicated, the person to see is an orthodontist. An orthodontist is a dentist who specializes in moving teeth and adjusting misaligned jaws. Most of the time that means installing braces, but there are many

different types of appliances that can be used to move teeth, retrain muscles, and affect the growth and position of jaws. Some of these devices are fixed, others are removable, and still others are (nearly) invisible. They all work by applying gentle pressure over an extended period of time on teeth and jaws. Some cases require surgery, in which case the orthodontist may perform the surgery or collaborate with another dental specialist. There is a great need for orthodontists. There are fewer than 10,000 practicing today, which is barely enough to handle the number of people seeking their services. Experts are predicting a job outlook that is better than any other occupation can expect.

Young and beautiful, Lois Pryce was a rising star at the BBC. Unbeknownst to her co-workers, Lois lived a parallel life as a biker babe with an overwhelming sense of wanderlust. So she packed in her career to ride her motorcycle on her own from the northernmost tip of Alaska to the southernmost tip of South America. Alone. Armed only with the Spanish words for 'caution' and 'cheese', Lois was rather

under-prepared for multiple bear sightings, bribing her way through borders, spending a night in a Mexican brothel and crashing her bike in the wilds of Patagonia. She most certainly got the adventure she craved, and her pulse-pounding, soul-searching adventure has already attracted fans worldwide - a weblog that she kept whilst on her travels was receiving more than two-thousand hits a day. Her hilarious, brilliantly written travelog will appeal to anyone who's ever dreamt of jacking-it-all-in and running away to see the world.

From Beth Harbison, the New York Times bestselling author of *When in Doubt*, *Add Butter* and *Shoe Addicts Anonymous*, comes *Chose the Wrong Guy*, *Gave Him the Wrong Finger*, a delightful new novel that will make you look at second chances in a whole new way. Ten years ago, Quinn Barton was on her way to the altar to marry Burke Morrison, her high school sweetheart, when something derailed her. Rather, someone derailed her—the Best Man who at the last minute begged her to reconsider the marriage. He told her that Burke had been cheating on her. For a long time. Quinn, stunned, hurt, and confused, struggled with the obligation of fulfilling her guests' expectations—providing a wedding—and running for her life. She chose running.

With the Best Man. Who happened to be Burke's brother, Frank. That relationship didn't work either. How could it, when Quinn had been engaged to, in love with, Frank's brother? Quinn opted for neither, and, instead, spends the next seventeen

years working in her family's Middleburg, Virginia, bridal shop, *Talk of the Gown*, where she subconsciously does penance for the disservice she did to marriage. But when the two men return to town for another wedding, old anger, hurt, and passion resurface. Just because you've traded the good guy for the bad guy for no guy doesn't mean you have to stay away from love for the rest of your life, does it? Told with Beth Harbison's flair for humor and heart, *Chose the Wrong Guy* will keep you guessing and make you believe in the possibilities of love.

Wild caprinae, including sheep and goats, are an extremely valuable group of mammals. While most live in mountains, some inhabit desert grasslands, tropical forests or even arctic tundra. They range in size from the 30kg goral to the 350kg musk ox and display a variety of horn

shapes and sizes as well as coat and body coloration. They are highly prized by hunters on account of their horns and their coats. Today, despite their important domestic relations, many wild caprinae are in danger of being lost forever: over 70 of caprinae taxa are threatened and over 30 endangered or critical. The main threats to them are over-harvesting, habitat loss and resource competition from livestock. Some face an additional threat from trophy hunters. Despite this, however, conservation legislation is either absent or, more often, poorly enforced. This action plan explores the value of caprinae to biodiversity, the threats facing the members of the species, and makes recommendations to reverse current trends. It also emphasizes the importance to caprinae conservation and survival of close collaboration among all parties involved in wildlife conservation including local peoples and hunting organizations, governments, scientists and academic institutions.
