Apologetics is for everyone. The Bible is clear that all believers are called to defend their faith. However, if apologetics is the formal process that we have come to expect, this sounds like an impossible task. But what if apologetics could be part

of natural, normal conversation—both from the pulpit and in everyday life? Aimed at preparing you to clearly and confidently defend your faith, Expository Apologetics sets forth an approach to apologetics that is rooted in Scripture and eminently accessible. Filled with real-world

examples and practical advice, this book will equip you with the tools you need to think biblically and converse persuasively—offering unbelievers “a reason for the hope that is in you.”

Biodiversity loss is one of the major resource problems facing the world, and the policy options available are restricted by

inappropriate economic tools which fail to capture the value of species and their variety. This study describes in non-technical terms how cost-benefit analysis techniques can be applied to species and species loss, and how they provide a measure of the efficiency of conservation measures. Only when conservation can be shown to pass such a basic economic test, the authors claim, will it be incorporated into policies.;David Pearce has also written *Blueprint for a Green Economy*. *Worthy of Redemption Expository Apologetics*
