Transportation Infrastructure BNI Publications

Pursuant to a legislative requirement, GAO provided information on the equipment rental rates states use to reimburse contractors for unanticipated work on federal-aid highway projects, focusing on: (1) the basis on which states establish equipment rental rates; (2) whether states establish rental rates that are appropriate with contractors' actual equipment costs; and (3) whether the Federal Highway Administration (FHWA) adequately oversees states' use of rental rate guidelines. GAO found that: (1) of the 52 departments of transportation that use a standard rate guide to determine equipment rental rates, 47 use national standard rate guidelines, 3 use published guidelines from external sources, and 2 have developed their own rate guides; (2) although the California Department of Transportation (Caltrans) has taken steps to lower its rates, its rates remain 10 percent higher than national standards because its equipment rental rate guidelines are not based on national standard rates and include unallowable costs; (3) 28 of 52 departments of transportation improperly established their equipment rental rates because they failed to follow FHWA guidelines, adhere to required methodologies, or fully account for duplicative overhead cost factors; (4) FHWA has allowed duplicative overhead costs to be paid by federal funds because its staff is not familiar with standard rate guidelines; (5) FHWA oversight of states' use of rental rates is inadequate because its rental rate guidance is not incorporated into highway program and policy manuals, guidance on contractor discounts is insufficient, review of rental rates is

not systematic and consistent, and its field offices are not told of potential problems; and (6) FHWA inattention to rental rate policy guidance and rate-setting methodologies has resulted in higher costs and inequitable treatment of contractors.

Contracts, Engineer Contract Instructions AASHTO

The Blue Book Network Guide to Construction Costs 2014 is a practical resource for all your construction estimating needs. Whether the job is for general construction, remodeling, building maintenance, or repair, the Blue Book Network Guide to Construction Costs provides the most accurate and up-to-date data for material and installation costs, labor and equipment rates, and even adjusted allowances for overhead and profit. The Blue Book Network Guide to Construction Costs 2014 also breaks down all unit and summary costs for every type of structure ... all organized in the 16-Division CSI Masterformat. It also includes prevailing wage rates for over 400 U.S. Metropolitan areas (based on the latest data published by the Department of Labor), square foot costs, Americans with Disabilities costs (ADA), production and demolition rates, energy factors, purchasing costs, equipment rental rates and much more!

Board of Contract Appeals Decisions BiblioGov

Various methods of assessing noise, loudness, and noise annoyance are reviewed and explained; sources, types, and intensities of traffic noise are noted; typical means of abatement and attenuation are described; design criteria for various land uses ranging from low-density to industrial are suggested and compared with the results of previous BBN and British systems for predicting annoyance and complaint; and a design guide for predicting traffic noise, capable of being programmed for batch and on-line computer applications, is presented in form suitable for use as a working tool. A flow diagram describes the interrelationships of elements in the traffic noise prediction methodology, and each element is discussed in detail in the text. The text is presented of a tape recording that takes the listener through a series of traffic situations, with such variables as traffic distance, flow velocity, distance, outdoors and indoors, and presence or absence of absorbers and attenuators.

Cost Estimating Guide for Road Construction BNI Publications

By their very nature, construction projects can create seemingly endless opportunities for conflict. Written by a best selling author with over 40 years of experiences in the construction and general contracting business, Construction Process Planning and Management provides you with the necessary tools to save time and money on your construction project. In this book, Sid Levy provides valuable advice for avoiding or working through the common problems that are a result of the long-term nature of construction projects, failure to select a ?project delivery system? appropriate to the project, incomplete drawing and specifications, unrealistic scheduling, poor communication and coordination among participants, and inadequate contract administration. From project genesis, through design development to contractor and contract selection, on to construction oversight, punch list and successful project close-out, this book will point out those pitfalls to avoid and offer practical advice at every step along the way. Administer the general construction process including solicitation of contractor's qualifications (pre-qualify bidders), comparative analysis of bid packages, recommendation for contract award, contract document negotiation and documentation of job change orders Provide Project Planning and on-site management and coordination of all construction projects Ensure compliance of building construction rules and regulations and collaborate with chief engineers to monitor quality of construction Conduct technical/plan review of construction documents and submit written responses identifying required corrections or changes Design, implement and oversee Company standards for construction policies, practices and processes

The United States Air Force JAG Law Review John Wiley & Sons

This book guides readers in planning, estimating, and directing construction equipment operations toward achieving the best possible result. Every effort is made to present such advanced management techniques as quantitative management methods, queuing theory, and system simulation in a way that can be easily understood and used by those with little background in higher mathematics or operations research. Coverage features new chapters on compressed air and water systems, lifting equipment, and the production of aggregate, concrete, and asphalt mixes as well as expanded discussions of more traditional topics, including compaction equipment and techniques, construction safety and environmental health, loaders, pavement repair and rehabilitation, quantitative management methods, the rent-lease-buy decision, rock excavation production and cost, roller compacted concrete, the simulation of construction equipment operations, soil stabilization, and trenchers and trenchless technology. For construction and construction equipment managers and engineers.
