*Multimedia Applications*  
Springer Science &  
Business Media  
Multimedia Applications  
discusses the basic  
characteristics of  
multimedia document  
handling, programming,  
security, human computer  
interfaces, and  
multimedia application  
services. The overall goal  
of the book is to provide a  
broad understanding of  
multimedia systems and  
applications in an  
integrated manner: a  
multimedia application  
and its user interface  
must be developed in an  
integrated fashion with  
underlying multimedia  
middleware, operating  
systems, networks,  
security, and multimedia  
devices. Fundamental  
information and  
properties of hypermedia  
document handling,  
multimedia security and  
various aspects of

multimedia applications  
are presented, especially  
about document handling  
and their standards,  
programming of  
multimedia applications,  
design of multimedia  
information at human  
computer interfaces,  
multimedia security  
challenges such as  
encryption and  
watermarking, multimedia  
in education, as well as  
multimedia applications to  
assist preparation,  
processing and  
application of multimedia  
content.

Multimedia Pearson  
Education India  
Multimedia Systems  
discusses the basic  
characteristics of  
multimedia operating  
systems, networking and  
communication, and  
multimedia middleware  
systems. The overall goal  
of the book is to provide a  
broad understanding of  
multimedia systems and  
applications in an  
integrated manner: a  
multimedia application  
and its user interface

must be developed in an  
integrated fashion with  
underlying multimedia  
middleware, operating  
systems, networks,  
security, and multimedia  
devices. Fundamental  
characteristics of  
multimedia operating and  
distributed  
communication systems  
are presented, especially  
scheduling algorithms and  
other OS supporting  
approaches for  
multimedia applications  
with soft-real-time  
deadlines, multimedia file  
systems and servers with  
their decision algorithms  
for data placement,  
scheduling and buffer  
management, multimedia  
communication, transport,  
and streaming protocols,  
services with their error  
control, congestion  
control and other Quality  
of Service aware and  
adaptive algorithms,  
synchronization services  
with their skew control  
methods, and group  
communication with their  
group coordinating  
algorithms and other

distributed services.
