 2018 Outstanding Academic Title, Choice Ambitious Science Teaching outlines a powerful framework for science teaching to ensure that instruction is rigorous and equitable for students from all backgrounds. The practices presented in the book are being used in schools and districts that seek to improve science teaching at scale, and a wide range of science subjects and grade levels are represented. The book is organized around four sets of core teaching practices: planning for engagement with big ideas; eliciting student thinking; supporting changes in students’ thinking; and drawing together evidence-based explanations. Discussion of each practice includes tools and routines that teachers can use to support students’ participation, transcripts of actual student-teacher dialogue and descriptions of teachers’ thinking as it unfolds, and examples of student work. The book also provides explicit guidance for “opportunity to learn” strategies that can help scaffold the participation of diverse students. Since the success of these practices depends so heavily on discourse among students, Ambitious Science Teaching includes chapters on productive classroom talk. Science-specific skills such as modeling and scientific argument are also covered. Drawing on the emerging research on core teaching practices and their extensive work with preservice and in-service teachers, Ambitious Science Teaching presents a coherent and aligned set of resources for

educators striving to meet the considerable challenges that have been set for them.

Completing a thesis is a crucial final stage in many bachelor's and master's programmes across Europe and beyond. However, the process of thesis writing, how it is experienced by the writers, and how those experiences impact on writing remain underexplored. This book examines the student experience of thesis writing through an interdisciplinary perspective drawing on theories of learning, emotions, and genre and narrative/discursive analysis. As a result of this approach, the thesis is reconceptualised as a multilayered experience from the point of view of student writers. The chapters, which arose out of a collaborative research project across 10 European countries, employ an innovative combination of methods including the use of journey plots to provide a complex picture of the thesis writing process, which will be of interest to readers involved in academic writing at all levels.

This book is a one stop guide to all your research methods needs. It is tailored specifically towards business and management courses, and central to this edition is the balanced coverage of qualitative and quantitative methods to clearly and concisely lead students through the research process, whatever their project may be. Now in its much anticipated fifth edition, Business Research Methods has been revised and updated to reflect all the latest trends in research methodology. The integration of statistical issues, as well as coverage of web-based surveys, qualitative interviews, big data, and content analysis of social media, aims to support the current student experience. A Running Case Study charts the progression of two student research projects - one qualitative and one quantitative - and shows how the content of each chapter can be used to develop their projects. Thought provoking questions are included to help students consider the issues and decisions involved, and how these might be applied to their own project. Deeper Insight into Research Methods boxes delve further into particular research issues, offering a detailed description to increase understanding of these areas, whilst Real Life examples put research methods into context, by showing how they have been applied in real world situations. New pedagogy features include: Research in Practice boxes provide an insight into situations and research decisions that students may encounter in real life projects. They contain hints, tips and sometimes questions to help think through a project. Theory Explained highlights key theories and demonstrates how these can be applied in practical research examples. Statistics in Action provides practical alternatives to qualitative research methods and gives examples of how statistical data can be presented, analyzed and interpreted to improve students data insights skills. The Online Learning Centre contains a vast amount of extra resources to support lecturers and student, including power points, instructor manuals, and a question bank. New to this edition are short case studies with teaching notes covering current topics and key theories, and worked examples and videos with associated questions for further practical exercises and real world examples. Perhaps the most daunting graduate school requirement is the development of an action research Master's thesis. This capstone task requires unprecedented amounts of time, energy, and verbiage. Designed to take stress out of the thesis-writing equation, this student-friendly comprehensive handbook glides the reader through a 28-step process from developing a focal topic to defending a scholarly thesis. Framing each

chapter as a one-week action assignment, the authors have broken down the process into manageable chunks to enable students writers to achieve an immediate sense of completion at every step. By using this scaffolding approach the the authors encourage the student researcher to focus on one part of the process rather than the total, sometimes overwhelming, final product. With the exception of the "Review of the Literature" section which takes several weeks to complete, all other thesis sections can and should be timed out for seven days. The Authors primary objective was to empower the student researcher to accomplish each of the steps in the process while never losing sight on the product that will help the children in their classrooms. Whether developing an Abstract or writing in-text citations, student researchers are guided throughout the nuances of the Publication Manual of the American Psychological Associations, 6th Edition.
