PIERRE HODGES

Children's Thinking

Routledge

"This book helps the practicing educator turn research into seamless classroom practice. The practice exercises can be implemented immediately to help build student success." —Katina

Keener, Science/Social Studies Teacher, T. C. Walker Elementary School, Gloucester, VA
Launch young learners on positive pathways through school! The early school years provide critical opportunities for children to develop foundational skills and positive attitudes toward learning. This book, the first in the Classroom Insights from Educational Psychology

series, gives current and prospective PreK–3 teachers valuable insight into how young children feel, think, and learn. Denise H. Daniels and Patricia K. Clarkson show how current research and theory from educational psychology can be applied to create a child-centered learning environment and to develop best practices for instruction. Readers will gain a deeper

understanding of: How children develop from the early years to middle childhood The importance of fostering positive teacher-child, child-child, and caregiver-child relationships Developmentally appropriate classroom practices that foster learning Children's experiences with technology and outdoor environments Vignettes and case studies, practice exercises, suggested questions make A Developmental Approach

to Educating Young Children a valuable asset in helping teachers design stimulating learning experiences for young children.

The Wiley-Blackwell Handbook of Childhood Cognitive Development
SAGE Publications

One of the issues central to both classic and contemporary theories of cognitive development is children's goal-directed behavior, which is typically investigated in terms of strategies. This book brings together in one volume the latest

research and theory regarding the development of children's strategies for a variety of cognitive tasks. Opening with a history of strategy development research and concluding with a chapter that integrates the diversity of ideas expressed by the contributors, *Children's Strategies* offers intervening chapters that examine strategy development for attention, analogical reasoning, mathematics, memory, reading, and problem solving in

infancy. Although there is much common ground shared by the various contributors to this volume, there is no consensus concerning what exactly a strategy is. This mixture of consensus and disagreement reflects both the explosion of research in this area since the late 1960's and the complexity of the issues involved. It also reflects the fact that this is a topic that is very much alive in cognitive circles, one that will continue to stimulate research for years to come. The papers in this

volume describe current research and theory concerning the development of children's strategies for handling a variety of cognitive tasks. After providing a historical view of the concept of strategies in cognitive development, the book highlights many of the issues of concern to contemporary developmental psychologists interested in strategies. The issues discussed include problem solving in infancy, memory, selective attention, mathematics,

analogical reasoning, and reading.

Children's Thinking

Psychology Press

Moral Development and

Reality explores the

nature of moral

development, human

behavior, and social

interconnections. The

exploration elucidates the

full range of moral

development, from

superficial perception to a

deeper understanding and

feeling through social

perspective-taking. By

comparing, contrasting,

and going beyond the key

theories of preeminent

thinkers Lawrence Kohlberg, Martin Hoffman, and Jonathan Haidt, John C. Gibbs tackles vital questions: What exactly is morality and its development? Can the key theoretical perspectives be integrated? What accounts for prosocial behavior, and how can we understand and treat antisocial behavior? Does moral development, including moments of moral inspiration, reflect a deeper reality? This fourth edition of *Moral Development and Reality*

is thoroughly updated, refined, and expanded. A major addition considers Paul Bloom's important challenge to Hoffman's theory. This book will have broad appeal across academic and applied disciplines in social and developmental psychology, education, the helping professions, and human development. Complete with case studies and chapter questions, it serves especially well as a text in advanced undergraduate and graduate courses in social and developmental

psychology, education, the helping professions, and human development. *Encyclopedia of Geography* Prentice Hall Shortlisted for the 2013 Nursery World Awards! 'This exciting book will greatly enhance understanding of learning throughout the early years, and reinforces the importance of responsive professionals who understand children's schemas. Atherton and Nutbrown have brought together socio-cultural and cognitive learning theories with ease, and

their metaphors are brilliantly evocative' -Dr Anne Meade, Consultant 'This book is drawn from a study carried out with rigour and contains several gems, such as the 'bike and slide exploration'; the idea of adults engaging in 'a dialogue of conceptual correspondence' with children; and tables outlining 'what the children might have been thinking'. A great read!' - Dr Cath Arnold, Pen Green Early Years Centre 'This is an exciting and illuminating account of

babies and toddlers, following their schema fascinations with determination and competence, as they continually explore and experiment and come to know their world. This book captivated me. It should be in every early childhood education setting' -Pam Cubey This is the first book to focus specifically on Schemas and children under three. The authors trace the development of schemas from motor level through to symbolic representation, and show

how to use schema theory to understand young children's learning and behaviour. This accessible and student-friendly book includes: -activities and discussion points -links to policy and practice - descriptive observational material -a look at the ethics of this kind of research -numerous photographs and illustrations -suggestions for follow-up reading The book is aimed at early childhood professionals and practitioners in ECEC settings, as well as those on initial training courses,

teacher education, Early Years courses, and higher degrees.

With the growing number of ethnic minority students in public schools, it is very important for teachers, librarians, and all those who work with children to have an understanding of appropriate multicultural literature. This book and the literature selections are designed to develop heightened sensitivity and understanding of people

from various cultures and traditions through the selection of carefully chosen literature. It includes a balance of research about the culture and the literature, a discussion of authentic literature for students from early childhood through young adults, and teaching activities designed to develop higher cognitive abilities. The book uses a unique five-phase approach for the study of multicultural literature that has been field tested.

Developing Thinking and

Understanding in Young Children Hodder Education

The Sixth Edition of David F. Bjorklund and Kayla B. Causey's topically organized Children's Thinking presents a current, comprehensive, and dynamic examination of cognitive development. The book covers individual children and their developmental journeys while also following the general paths of overall cognitive development in children. This unique and effective approach gives readers a

holistic view of children's cognitive development, acknowledging that while no two children are exactly alike, they tend to follow similar developmental patterns. Supported by the latest research studies and data, the Sixth Edition provides valuable insights for readers to better understand and work with children.

Honey for a Child's Heart
Psychology Press
Developing Thinking and Understanding in Young Children presents a comprehensive and

accessible overview of contemporary theory and research about young children's developing thinking and understanding. Throughout this second edition, the ideas and theories presented are enlivened by transcripts of children's activities and conversations taken from practice and contemporary research, helping readers to make links between theory, research and practice. Each chapter also includes ideas for further reading and suggested

activities. Aimed at all those interested in how young children develop through their thoughts and actions, Sue Robson explores: theories of cognitive development the social, emotional and cultural contexts of children's thinking children's conceptual development visual thinking approaches to supporting the development of young children's thinking and understanding latest developments in brain science and young children the central roles

of play and language in young children's developing thinking. Including a new chapter on young children's musical thinking, expanded sections on self regulation, metacognition and creative thinking and the use of video to observe and describe young children's thinking, this book will be an essential read for all students undertaking Early Childhood, Primary PGCE and EYPS courses. Those studying for a Foundation degree in Early Years and Childcare

will also find this book to be of interest.
Moral Development and Reality Wadsworth Publishing Company
 This definitive volume is the result of collaboration by top scholars in the field of children's cognition. New edition offers an up-to-date overview of all the major areas of importance in the field, and includes new data from cognitive neuroscience and new chapters on social cognitive development and language Provides state-of-the-art summaries of current

research by international specialists in different areas of cognitive development Spans aspects of cognitive development from infancy to the onset of adolescence Includes chapters on symbolic reasoning, pretend play, spatial development, abnormal cognitive development and current theoretical perspectives

Thinking Critically About Child Development

Lawrence Erlbaum Associates

This series spans the globe presenting leading research in economics. It is perhaps a sign of the times that economic weapons such as sanctions seem to be as powerful as or more so

than tanks. International applications and examples of economic progress are invaluable in a troubled world with economic booms bursting like so many penny balloons. Globalisation, outstanding and jobless recoveries present economic issues of concern to millions.

Children's Thinking A&C
Black

Drawing on interview data, the authors describe K-3 students' knowledge and thinking about basic aspects of the social world that are addressed in the

elementary social studies curriculum. The interviews focused on human activities relating to nine cultural universals that are commonly addressed in the elementary social studies curriculum: food, clothing, shelter, communication, transportation, family living, childhood, money, and government. This volume synthesizes findings from the research and discusses their implications for curriculum and instruction in early social studies. Children's Thinking About

Cultural Universals significantly expands the knowledge base on developments in children's social knowledge and thinking and, in addition, provides a wealth of information to inform social studies educators' and curriculum developers' efforts to match instruction to students' prior knowledge, both by building on already developed valid knowledge and by addressing common misconceptions. It represents a quantum leap in the availability of

information on the trajectories of children's knowledge about common topics in primary elementary social studies education.

[Understanding Child Development 0-8 Years 4th Edition: Linking Theory and Practice](#) John Wiley & Sons

Ensure your students link theory with practice with this updated version of the authoritative and accessible series from Jennie Lindon. Linking Theory and Practice has helped thousands of students make the right

connections between their lectures and the real settings that they go on to work in. This latest edition of Reflective Practice and Early Years

Professionalism provides a useful overview of the subject in straightforward language that allows novices to access the more complicated concepts. Jennie Lindon's trademark approach provides a trusted and authoritative voice for a wide range of courses, including undergraduate and foundation degrees in Early Years and Early

Childhood, PGCEs and BEd programmes. · Provides detailed references for further reading with descriptions of 'key texts' for each chapter · 'Pause for reflection' feature provides numerous opportunities to think about the impact of their own role. · Covers the latest thinking on child development, including topics such as neuroscience.

Cognitive Psychology and Its Implications

Routledge

Presents research on the topic of young children's

naive biology, examining such theoretical issues as processes, conditions and mechanisms in conceptual development using the development of biological understanding as the target case.

The Children's Thinking
Corwin Press

First published in 1978. In 1963, John Flavell posed one of the truly basic questions underlying the study of children's thinking; his question was simply "What develops?" This volume holds the papers from the 13th Annual Carnegie

Cognition Symposium, held in May 1977, that considering what progress had been made toward answering this question in the past 15 years.

Children's Thinking

Oxford University Press
A highly successful guide to encourage classroom discussion for developing children's thinking, learning and literacy skills contains material on the latest trends in teaching thinking, including dialogic teaching, creativity and personalized learning.

This sourcebook of ideas is essential reading for anyone seeking to develop children's minds, to build their self-esteem or to improve the quality of teaching and learning in schools.

Children's Thinking SAGE Publications

Critical Thinking is a core skill needed to make all your studies more effective. This totally revised and updated book is a must if you want to find out how to develop your own arguments and evaluate other people's. Specifically, you will need

to look at others' assumptions and their use of evidence. Learn too how to spot, and rectify, weaknesses of your own. An indispensable book, especially for students following the OCR AS-level course in Critical Thinking.

Emerging Minds Nova Publishers

In the topically organized *Child Development: An Active Learning Approach*, Fourth Edition, authors Laura E. Levine and Joyce Munsch take students on an active journey toward understanding children and their development.

Active Learning activities integrated throughout the text capture student interest and turn reading into an engaged learning process. Through the authors' active learning philosophy, students are challenged to test their knowledge, confront common misconceptions, relate the material to their own experiences, and participate in real-world activities independently and with children. Because consuming research is equally important in the study of child development,

Journey of Research features provide both historical context and its links to today's cutting-edge research studies. Students will discover the excitement of studying child development while gaining skills they can use long after course completion. New Developments in Education Research
Oxford University Press

For courses in cognitive development. Practical implications of the study of children's thinking and development The mysteries of children's thought processes have traditionally been a mystery to adults; until recently, with the development of revealing experimental methods. Children's Thinking aims to shine a light on the thoughts and perceptions of children using major research findings and cutting-edge theories on children's thinking development. The text

examines the change process through which development occurs, from infancy to adolescence, and the changes in conceptual understanding, language, memory, perception, and problem-solving that mark cognitive development. The heavily updated 5th Edition includes chapter restructuring and reorganization, new materials and selections, and more.

[Early Childhood Education, 4th Edition](#)

SAGE

A leading clinical expert in

the fields of child cognitive behavior therapy and anxiety disorders, Dr. Tamar Chansky frequently counsels children (and their parents) whose negative thinking creates chronic or occasional emotional hurdles and impedes optimism, flexibility, and happiness. Now, in the first book that specifically focuses on negative thinking in kids, *Freeing Your Child from Negative Thinking* provides parents, caregivers, and clinicians the same clear, concise,

and compassionate guidance that Dr. Chansky employed in her previous guides to relieving children from anxiety and obsessive compulsive symptoms. Here she thoroughly covers the underlying causes of children's negative attitudes, as well as providing multiple strategies for managing negative thoughts, building optimism, and establishing emotional resilience.

Cognitive Development

Zondervan

This book brings together

major research findings and theories on the development of children's thinking from infancy to adolescence, and also considers the subsequent practical implications. It examines the processes through which development occurs, as well as the nature of the changes that mark cognitive development in language, perception, memory, conceptual understanding and problem-solving. theories of cognitive development from Ceci, Halford, Keil, Markman and Wellman

and discusses the development of such fundamental concepts as time, space and mind.

Major emphasis is placed on infants' attention and perception in the first days of life whilst there is

thorough exploration of the relation between brain maturation and cognitive development.
