Two-qubit systems typically employ 36 projective measurements for high-fidelity tomographic estimation. The overcomplete nature of

the 36 measurements suggests possible robustness of the estimation procedure to missing measurements. In this paper, we explore the resilience of machine-learning-based quantum state estimation techniques to missing measurements by creating a pipeline of stacked ...
Machine learning pipeline for quantum state ... - arxiv.org
Quantum embeddings for machine learning. Authors: Seth Lloyd, Maria Schuld, Aroosa Ijaz, Josh Izaac,

Nathan Killoran. Download PDF. Abstract: Quantum classifiers are trainable quantum circuits used as machine learning models. The first part of the circuit implements a quantum feature map that encodes classical inputs into quantum states, embedding the data in a high-dimensional Hilbert space; the second part of the circuit executes a quantum measurement interpreted as the output of the model.[2001.03622]
Quantum embeddings for machine learning
Machine

learning is a fascinating and exciting field within computer science. Recently, this excitement has been transferred to the quantum information realm. Currently, all proposals for the quantum version of machine learning utilize the finite-dimensional substrate of discrete variables. Here we generalize quantum machine learning to the more complex, but still remarkably practical ...Quantum machine learning over infinite dimensions - arXiv.orgThe authors in

2012arXiv1208.0663S also devised a quantum learning machine for binary classification of qubit states that does not require/in no need of a quantum memory. The required classical memory was found to grow only logarithmically with the number of training qubits 2012arXiv1208.0663S .Quantum Machine Learning - arXiv VanityarXiv:2011.01938. Enhancing machine learning applications with quantum computing is currently being massively investigated, since it

might prove quantum advantage during the NISQ era. Enhancement is typically performed through improvement of the training process of existing classical models or enhancing inference in graphical models.The power of data in quantum machine learningWe determine the resource scaling of machine learning-based quantum state reconstruction methods, in terms of both inference and training, for systems of up to four qubits. Further, we examine system

performance in the lowcount regime, likely to be encountered in the tomography of high-dimensional systems. Finally, we implement our quantum state reconstruction method on a IBM Q quantum ...[PDF] On the experimental feasibility of quantum state ...arXiv:2010.02174. There is currently a big effort in proving the existence of quantum advantage in NISQ devices, with typical applications including machine learning due to its wide applicability.

However, an argument has been raised stipulating whether the advantage being proven in such applications arises from the nature of quantum computing or the way the data is provided. Quantum Speed-up in Supervised Machine Learning Rahko is solving chemistry with quantum machine learning. Rahko is one of the world's most advanced teams in quantum machine learning. With the Rahko quantum machine learning platform and a team comprising experts

in quantum machine learning, quantum software engineering, and quantum chemistry, Rahko is constantly breaking ground in quantum machine learning for quantum chemistry.
