A fresh look at the history of psychology placed in its social, political, and cultural contexts A History of Modern Psychology in Context presents the history of modern psychology in the richness of its many contexts. The authors resist the traditional storylines of great achievements by eminent people, or schools of thought that rise and fall in the wake of scientific progress. Instead, psychology is portrayed as a network of scientific and professional practices embedded in specific temporal, social, political, and cultural contexts. The narrative is informed by three key concepts—indigenization, reflexivity, and social constructionism—and by the fascinating interplay between disciplinary Psychology and everyday psychology. The authors complicate the notion of who is at the center and who is at the periphery of the history of psychology by bringing in actors and events that are often overlooked in traditional accounts. They also highlight how the reflexive nature of Psychology—a science produced both by and about humans—accords history a prominent place in understanding the discipline and the theories it generates. Throughout the text, the authors show how Psychology and psychologists are embedded in cultures that indelibly shape how the discipline is defined and practiced, the kind of knowledge it creates, and how this knowledge is received. The text also moves beyond an exclusive focus on the development of North American and European psychologies to explore the development of psychologies in other indigenous contexts, especially from the mid-20th-century onward.

"This is an important book, exceptionally well written, and logically consistent with the basic premise of the unitary nature of science. Many students of society and culture would take violent issue with most of the things that Skinner has to say, but even those who disagree most will find this a stimulating book." —Samuel M. Strong, *The American Journal of Sociology* "This is a remarkable book—remarkable in that it presents a strong, consistent, and all but exhaustive case for a natural science of human behavior...It ought to be...valuable for those whose preferences lie with, as well as those whose preferences stand against, a behavioristic approach to human activity." —Harry Prosch, *Ethics*

Students with disabilities who are not able to perform to the best of their abilities often find themselves learning in inaccessible environments and subjected to increased stress levels due to the haphazard provisioning of education characterized by physical, communicative, and unsuitable teaching and learning approaches. Very often this is a result of various shortcomings including unfair assessment practices. Misconceptions and a lack of knowledge with regard to the implementation of inclusive education detract from the successful admission of students with disabilities and their retention and active participation. The Handbook of Research on Creating Spaces for African Epistemologies in the Inclusive Education Discourse explores the concept of inclusive education in an African context. It advocates for the monitoring and evaluation of inclusive education and proposes interventions where reasonable accommodation or lack of accessibility is a reason for students with disabilities to not benefit from this system. Covering topics such as barriers to learning, rural schools, and student support, this major reference work is an essential resource for administrators, advocates for students with disabilities, policymakers, researchers, pre-service teachers, educators, academicians, and students.
