Principles of Archaeology Rowman & Littlefield
The study of children and childhood in historical and prehistoric life is an overlooked area of study that Jane Baxter addresses in this brief book. Her timely contribution stresses the importance of studying children as active participants in past cultures, instead of regarding them mainly for their effect on adult life. Using the

critical concepts of gender and socialization, she develops new theoretical and methodological approaches for the archaeological study of this large but invisible population. Baxter presents examples from the analysis of toys, miniatures, and other objects traditionally associated with children, from the gendered distribution of activity space, from the remains of children-as-apprentices, and from mortuary evidence. Baxter's work will aid archaeologists bring a more nuanced understanding of children's role in the historical and archaeological record.

[An Introduction to Material Culture](#) Routledge
Archaeology doesn't just happen. With large numbers of people

involved, the complex logistics of fieldwork, funding needed for projects of any size, and a bewildering set of legal regulations and ethical norms to follow, a well-run archaeological project requires careful and detailed planning. In this reader-friendly guide, Black and Jolly give novice researchers invaluable practical advice on the process of designing successful field projects. Encompassing both directed academic and directed CRM projects, they outline the elements needed in your professional toolkit, show step-by-step how an archaeological project proceeds, focus on developing appropriate research questions and theoretical models, and address implementation issues from NAGPRA regulations down to estimating the number of shovels to toss into the pickup. Sidebars explain important topics like the Section 106 process, the importance of ethnology and geology to archaeologists, OSHA requirements, and how to assess significance. *Archaeology by Design* is an ideal starting point for giving students and novices the big picture of a contemporary archaeological project.

A History of Archaeological Thought Routledge

Archaeological practice is currently shifting in response to feminist, indigenous, activist, community-based, and anarchic critiques of how archaeology is practiced and how science is used to interpret the past lives of people. Inspired by the calls for a different way of doing archaeology, this volume presents a case here for a heart-centered archaeological practice. Heart-centered practice emerged in care-based disciplines, such as nursing and various forms of therapy, as a way to recognize the importance of caring for those on whom we work, and as an avenue to explore how our interactions with others impacts our own emotions and

heart. Archaeologists are disciplined to separate mind and heart, a division which harkens back to the origins of western thought. The dualism between the mental and the physical is fundamental to the concept that humans can objectively study the world without being immersed in it. Scientific approaches to understanding the world assume there is an objective world to be studied and that humans must remove themselves from that world in order to find the truth. An archaeology of the heart rejects this dualism; rather, we see mind, body, heart, and spirit as inextricable. An archaeology of the heart provides a new space for thinking through an integrated, responsible, and grounded archaeology, where there is care for the living and the dead, acknowledges the need to build responsible relationships with communities, and with the archaeological record, and emphasize the role of rigor in how work and research is conducted. The contributions bring together archaeological practitioners from across the globe in different contexts to explore how heart-centered practice can impact archaeological theory, methodology, and research throughout the discipline.

Seeking Our Past Routledge

Our Blue Planet provides a comprehensive introduction to the field of maritime and underwater archaeology. Situating the field within the broader study of history and archaeology, this book advocates that an understanding of how our ancestors interacted with rivers, lakes, and oceans is integral to comprehending the human past. *Our Blue Planet* covers the full breadth of maritime and underwater archaeology, including formerly terrestrial sites drowned by rising sea levels, coastal sites, and a wide variety of wreck sites ranging across the globe and spanning from antiquity

to World War II. Beginning with a definition of the field and several chapters dedicated to the methods of finding, recording, and interpreting submerged sites, *Our Blue Planet* provides an entry point for all readers, whether or not they are familiar with maritime and underwater archaeology or archaeology in general. The book then shifts to a thematic approach with chapters exploring human interactions with the watery world, both along the coasts and by ship. These chapters discuss the relationships between culture, technology, and environment that allowed humans through time to spread across the globe. Because ships were the primary means for humans to interact with large bodies of water, they are the focus of several chapters on the development of shipbuilding technology, the lives of sailors, and the uses of ships in exploration, expansion, and warfare. The book ends with chapters on how and why the non-renewable submerged archaeological record should be managed, so that both current and future generations can learn from the achievements and failures of past societies, as well as on how anyone can become involved in maritime and underwater archaeology. Throughout, the reader benefits from the personal reflections of a number of leading figures in the field.

This comprehensive text is intended for the junior-senior level course in North American Archaeology. Written by accomplished scholar Dean Snow, this new text approaches native North America from the perspective of evolutionary ecology. Succinct, streamlined chapters present an extensive groundwork for supplementary material, or serve as a core text. The narrative covers all of Mesoamerica, and explicates the links between the part of North America covered by the United States and Canada and the portions covered by Mexico, Guatemala, Belize, and the Greater Antilles. Additionally, book is extensively illustrated with the author's own research and findings.

A Technical Handbook, Second Edition Cambridge University Press

Many students view archaeological theory as a subject distinct from field research. This division is reinforced by the way theory is taught, often in stand-alone courses that focus more on logic and reasoning than on the application of ideas to fieldwork. Divorcing thought from action does not convey how archaeologists go about understanding the past. This book bridges the gap between theory and practice by looking in detail at how the authors and their colleagues used theory to interpret what they found while conducting research in northwest Honduras. This is not a linear narrative. Rather, the book highlights the open-ended nature of archaeological investigations in which theories guide research whose findings may challenge these initial interpretations and lead in unexpected directions. Pursuing those novel investigations requires new theories that are themselves subject to refutation by newly gathered data. The central case study is the writers' work in Honduras. The interrelations of fieldwork, data, theory, and interpretation are also illustrated with two long-running archaeological debates, the emergence of inequality in southern Mesopotamia and inferring the ancient meanings of Stonehenge. The book is of special interest to undergraduate Anthropology/Archaeology majors and first- and second-year graduate students, along with anyone interested in how archaeologists convert the static materials we find into dynamic histories of long-vanished people.

A Brief Introduction Cambridge University Press

The History of Archaeology: An Introduction provides global coverage with chapters devoted to particular regions of the

world. The regional approach allows readers to understand the similarities and differences in the history of and approach to archaeology in various parts of the world. Each chapter is written by a specialist scholar with experience of the region concerned. Thus the book focuses on the earliest beginnings of archaeology in different parts of the world, and how it developed from being a pastime for antiquarians and collectors to a serious attempt to obtain information about past societies. Woven into the text are various boxes that explore key archaeologists, sites and important discoveries in the history of archaeology enriching the story of the discipline's development. With such far ranging coverage, including an exploration of the little covered development of Russian and Chinese archaeology, *The History of Archaeology* is the perfect introduction to the history of archaeology for the interested reader and student alike.

Arthur Asa Berger, author of an array of texts in communication, popular culture, and social theory, is back with the second edition of his popular, user-friendly guide for students who want to understand the social meanings of objects. In this broadly interdisciplinary text, Berger takes the reader through half a dozen theoretical models that are commonly used to analyze objects. He then describes and analyzes eleven objects, many of them new to this edition—including smartphones, Facebook, hair dye, and the American flag—showing how they demonstrate concepts like globalization, identity, and nationalism. The book includes a series of exercises that allow students to analyze objects in their own environment. Brief and inexpensive, this introductory guide will be used in courses ranging from anthropology to art history, pop culture to psychology.
