I consider philosophy rather than arts and write not concerning
manual but natural powers, and consider chiefly those things

which relate to gravity, levity, elastic force, the resistance of
fluids, and the like forces, whether attractive or impulsive; and
therefore I offer this work as the mathematical principles of
philosophy. In the third book I give an example of this in the
explication of the System of the World. I derive from celestial
phenomena the forces of gravity with which bodies tend to the
sun and other planets.
