This book is for all those professionals directly or indirectly working in magnetic resonance, and arises from the need to have available a complete and comprehensible guide, in order to recognize, construe and work out almost all the artifacts that can currently be observed in the supplied scanners, being low-field, mid-field, high-field or ultra-high-field. The content includes many demonstrative images and few mathematical formula, moreover simple to be construed, in order to make easily comprehensible the complex mechanisms hidden behind MR Physics, connected to the

artifact under consideration. The text presents a basic introduction to the magnetic resonance and a glossary of used acronyms, so that the principles related to k-space, impulse sequences and relaxation times are clearly understood. Artifacts are effectively classified in chapters and subchapters, according to the underlying cause generating them. Each artifact group is dealt with following a logic providing for: - Introduction to the specific artifact-related technique.-Modes by which the artifact shows itself, on the basis of images and text.- Technical solutions suited to the resolutions.-Online examinations, videos, focuses, overview tables with access linked to the credentials obtained when purchasing the original text. MRI Technologist Dr. Luca Bartalini
L'operatore socio-sanitario (OSS) con formazione

assistenza sanitaria
Springer Nature

Helps students to develop the thinking skills required for success in the BMAT, which is required by seven universities for entrance onto competitive courses, such as medicine and veterinary science.

Mozart's Last Aria Harper Collins

'One of the most beautiful books published in recent years: an intense, poignant story' Caterina Bonvicini Can a prison free those who enter? Nisida, moored like a boat in the Mediterranean, is a small island nestled between Capri and Bagnoli, off the coast of Naples. Each day, through the early morning light, Elisabetta Maiorano travels across the city, passes by the guards on the way into the detention centre, hands over her bag and arrives at her classroom. All thoughts are suspended once inside. Usually Elisabetta hasn't spoken to anyone

since the day before; her only reason for living to teach mathematics to the group of young inmates who arrive not long after she does. But one day, Almarina shows up and everything changes. She is Romanian and bears the signs of her personal history on her body. Together, closed up in a small classroom, a true island within an island, Elisabetta and Almarina discover a possible pathway to freedom. Warm and intimate, intense and political, Valeria Parrella touches our emotions, giving voice to a loneliness that is universal. Almarina is about finding love in unexpected places, about atonement, forgetting and starting over. But mostly it is about two women learning how to live again. Translated by Alex Valente

 Lippincott Williams & Wilkins
 his one-of-a-kind text covers every aspect of independent nursing care -- it's a must-have resource for every practicing and student nurse! Content includes nursing care plans for the care of all adults regardless of their clinical situation; detailed care plans for specific clinical problems; collaborative problems and nursing diagnoses; and a strong emphasis on documentation. It also includes research validated identification of frequently encountered nursing diagnoses and collaborative problems. This edition contains 15 new care paths for common diseases/disorders

 This textbook provides a
 sound foundation in
 physical optics by
 covering key concepts in
 a rigorous but accessible
 manner. Propagation of
 electromagnetic waves is
 examined from multiple
 perspectives, with
 explanation of which
 viewpoints and methods
 are best suited to
 different situations. After
 an introduction to the
 theory of
 electromagnetism,
 reflection, refraction, and
 dispersion, topics such as
 geometrical optics,
 interference, diffraction,
 coherence, laser beams,
 polarization,
 crystallography, and
 anisotropy are closely
 examined. Optical
 elements, including
 lenses, mirrors, prisms,
 classical and Fabry-Perot
 interferometers, resonant
 cavities, multilayer
 dielectric structures,
 interference and spatial
 filters, diffraction gratings,
 polarizers, and
 birefringent plates, are
 treated in depth. The
 coverage also
 encompasses such
 seldom-covered topics as

modeling of general
 astigmatism via 4x4
 matrices, FFT-based
 numerical methods, and
 bianisotropy, with a
 relativistic treatment of
 optical activity and the
 Faraday and Fresnel-
 Fizeau effects. Finally, the
 history of optics is
 discussed.

“Tears of Salt... reveals
 the human side of
 suffering through the life
 of one man.” —Adele
 Annesi, Washington
 Independent Review of
 Books Situated more than
 one hundred miles off
 Italy’s southern coast, the
 rocky island of
 Lampedusa has hit world
 headlines in recent years
 as the first port of call for
 hundreds of thousands of
 African and Middle
 Eastern refugees fleeing
 civil war and terrorism
 and hoping to make a new
 life in Europe. Dr. Pietro
 Bartolo, who runs the lone
 medical clinic on the
 island, has been caring for
 many of them—both the
 living and the dead—for a
 quarter century. Tears of
 Salt is Dr. Bartolo’s
 moving account of his life
 and work set against one
 of the signal crises of our
 time. With quiet dignity
 and an unshakable moral

center, he tells unforgettable tales of pain and hope, stories of those who didn't make it and those who did.

Kit OSS 2021. Manuale + Quiz Independently Published

The fifth edition of this classic text is the definitive, clinically orientated guide to a critical area within healthcare practice, full of sound, practical advice for all those involved in the control of infection in a variety of settings. Known in previous editions as *Control of Hospital Infection*, the new Ayliffe's *Control of Healthcare-Associated Infection* has again been brought up to date and thoroughly revised to emphasise the broader range of its coverage, from the hospital setting - including the ward, operating theatres, kitchens and laundry facilities - to health care provision in the community. Returning readers will find that the content has also been restructured, improving access to related topics. Part One discusses the basic principles of infection control, including administrative issues, surveillance and reporting, sterilization, disinfection and decontamination, with an

emphasis on the key area of hand hygiene. Part Two covers the specific areas of prophylaxis and treatment of infections. In Part Three prevention in different healthcare settings is presented, including issues particular to special wards and departments such as paediatric and neonatal units, intensive care, the elderly and those being treated or working within allied health areas such as x-ray, physiotherapy and the laboratory setting. Ayliffe's *Control of Healthcare-Associated Infection* remains essential reading for all infection control practitioners, nurses, doctors, surgeons, allied health professionals, hospital managers and administrators, and public health personnel.

Artifacts and Technical Solutions in MR Diagnostic Imaging

Maggioli Editore
Award-winning author Matt Rees takes readers to 18th century Austria, where Mozart's estranged sister Nannerl stumbles into a world of ambition, conspiracy, and immortal music while attempting to uncover the truth about her brother's suspicious death. Did Mozart's life end in murder? Nannerl must

brave dire circumstances to find out, running afoul of the secret police, the freemasons, and even the Austrian Emperor himself as she delves into a scandal greater than she had ever imagined. With captivating historical details, compelling characters, and a real-life mystery upon which everything hinges, Rees—the award-winning author of the internationally acclaimed *Omar Yussef* crime series—writes in the tradition of Irvin Yalom's *When Nietzsche Wept*, Louis Bayard's *The Pale Blue Eye*, and Phillip Singleton's *The Einstein Girl* to achieve the very best in historical fiction with *Mozart's Last Aria*.
