The Perfect Slime presents the latest state of knowledge and all aspects of the Extracellular Polymeric Substances, (EPS) matrix - from the ecological and health to the antifouling perspectives. The book brings together all the current material in order to expand our understanding of the functions, properties and characteristics of the matrix as well as the possibilities to strengthen or weaken it. The EPS matrix represents the immediate environment in which biofilm organisms live. From their point of view, this matrix has paramount advantages. It allows them to stay together for extended periods and form synergistic microconsortia, it retains extracellular enzymes and turns the matrix into an external digestion system and it is a universal recycling yard, it protects them against desiccation, it allows for intense communication and represents a huge genetic archive. They can remodel their matrix, break free and eventually, they can use it as a nutrient source. The EPS matrix can be considered as one of the emergent properties of biofilms and are a major reason for the success of this form of life. Nevertheless, they have been termed the "black matter of biofilms" for good reasons. First of all: the isolation methods define the results. In most cases, only water soluble EPS components are investigated; insoluble ones such as cellulose or amyloids are much less included. In particular in environmental biofilms with many species, it is difficult to impossible isolate, separate the various EPS molecules they are encased in and to define which species produced which EPS. The regulation and the factors

which trigger or inhibit EPS production are still very poorly understood. Furthermore: bacteria are not the only microorganisms to produce EPS. Archaea, Fungi and algae can also form EPS. This book investigates the questions, What is their composition, function, dynamics and regulation? What do they all have in common?

Over the past decade a rising chorus of critics - from William Bennett to Allan Bloom - has decried the supposedly dire state of our public schools. Kids aren't learning what they should, violence and chaos reign in the classroom, and bureaucracy strangles attempts at reform. But how much of that grim image is really true? In *The Manufactured Crisis*, two prominent scholars, prize-winning educational psychologist David C. Berliner and leading social psychologist Bruce J. Biddle, fight back with the good news. They debunk a whole series of familiar but untrue statistics about public schools - that SAT scores have been dropping, when for many groups they are in fact rising; that illiteracy is up, when in fact the numbers have been skewed because schools are now educating the traditionally disenfranchised in ever larger numbers; that investments in public education do not pay off when, in fact, they lead to greater student achievements and life earnings; that private schools are inherently better than public schools when, in fact, the evidence does not support this charge. Berliner and Biddle tear through these and other sensational myths to give the reader an honest look at public education in America and the misguided, often tragic proposals that critics have urged for correcting these fictive problems. In addition, they expose and offer solutions to the real problems American public schools face today, schools that continue to provide an increasingly diverse citizenry with the opportunity to better their lives.

Baxter Magolda uses data gathered from in-depth interviews over a five-year period to reveal four distinct "ways of knowing." These range from the most basic - in which learning is a question of acquiring information and repeating - to the most complex - in which students evaluate a variety of opinions before finally forming their own. In an innovative approach, the author presents direct excerpts from interviews with students, allowing us to "hear" their experiences in their own words - and offers rich data about the current realities of learning in college. The book provides useful real-life examples of how instructional approaches, class expectations, peer interaction, evaluation methods, and other factors affect intellectual development in the classroom.

The 12th edition of this textbook has been revised and reorganized significantly for greater clarity, coherence and consistency. Coverage includes emerging issues such as the impact of automated valuation models on the appraisal industry; the new emphasis on extraordinary assumptions and hypothetical conditions in recent revisions of standards of professional practice; and important data sources. For both novice appraisers and established practitioners. c. Book News Inc.

From the archives of the Library of Congress: "An irresistible treasury for book and library lovers." —Booklist (starred review) The Library of Congress brings book lovers an enriching tribute to the power of the written word and to the history of our most beloved books. Featuring more than two hundred full-color images of original catalog cards, first edition book covers, and photographs from the library's magnificent archives, this collection is a visual celebration of the rarely seen treasures in one of the world's most famous libraries and the brilliant catalog system that has kept it organized for hundreds of years. Packed with engaging facts on literary classics—from Ulysses to The Cat in the Hat to Shakespeare's First Folio to The Catcher in the Rye—this is an ode to the enduring magic and importance of books. "The Card Catalog is many things: a lucid overview of the history of bibliographic practices, a paean to the Library of Congress, a memento of the cherished card catalogs of yore, and an illustrated collection of bookish trivia . . . The illustrations are amazing: luscious reproductions of dozens of cards, lists, covers, title pages, and other images guaranteed to bring a wistful gleam to the book nerd's eye." —The Washington Post

This book presents case studies of the Women's Studies programs at seven institutions of higher education in the United States focusing on how and what students learn in Women's Studies programs. An introduction describes the development of Women's Studies as an academic discipline, the recent criticism of such programs, the development of the project to study this area, questions generated during the project about student learning, the importance of institutional context for each case study, and institutional challenges generated at some sites. The body of the book presents a chapter for each institution detailing the scope, goals, learning skills, and structure of that institution's program. Many of the program descriptions touch on the development of the program at that institution, the general institutional climate and technical notes on conducting the case study at that site. The chapters are as follows: (1) "Introduction"; (2) "University of Colorado: Personalized Learning" (Marcia Westkott and Gay Victoria); (3) "Lewis and Clark College: A Single Curriculum" (Laurie Finke and others); (4) "Old Dominion University: Making Connections" (Anita Clair Fellman and Barbara A. Winstead); (5) "Wellesley College: Counting the Meanings" (Rosanna Hertz and Susan Reverby); (6) "CUNY-Hunter College: Feminist Education" (Michele Paludi and Joan Tronto); (7) "Oberlin College: Self-Empowerment and Difference" (Linda R. Silver); (8) "University of Missouri-Columbia: For Women's Sake" (Mary Jo Neitz and Michelle Gadbois); and (9) "Conclusion." Most chapters include extensive references. (JB)

Atlas of the Land and Freshwater Molluscs of Britain and Ireland, published in association with the Conchological Society of Great Britain and Ireland, is the culmination of nearly forty years' work by its members. This atlas, which treats each species concisely and gives vernacular as well as scientific names, with common synonyms, contains dot-distribution maps of every species (generated in 1998 by the Biological Records Centre, ITE, Monks Wood), accompanied by black-and-white illustrations; short notes on habitat; history (including fossil occurrence) and status (incorporating Red Data Book criteria where appropriate); and the species' range outside the British Isles.

Coffee: Emerging Health Benefits and Disease Prevention presents a comprehensive overview of the recent scientific advances in the field. The book focuses on the following topics: coffee constituents; pro- and antioxidant properties of coffee constituents; bioavailability of coffee constituents; health benefits and disease prevention effects of coffee; and potential negative impacts on health. Multiple chapters describe coffee's positive impact on health and various diseases: type 2 diabetes; neurodegenerative diseases (Parkinson's and Alzheimer's); cancer (prostate, bladder, pancreatic, breast, ovarian, colon and colorectal); cardiovascular health; and liver health. Coffee's positive effects on mood, suicide rate and cognitive performance are addressed as are the negative health impacts of coffee on pregnancy, insulin sensitivity, dehydration, gastric irritation, anxiety, and withdrawal syndrome issues. Written by many of the top researchers in the world, Coffee: Emerging Health Benefits and Disease Prevention is a must-have reference for food professionals in academia, industry, and governmental and regulatory agencies whose work involves coffee.

This book is intended to help college faculty create conditions in which students learn to construct knowledge in their disciplines and achieve self-authorship. A significant and often overlooked dimension mediating learning and self-authorship centers on learners' ways of knowing, or their assumptions about the nature, limits, and certainty of knowledge. A learner who assumes that all knowledge is certain expects to hear answers from an authority figure; in contrast, a learner who views knowledge as relative expects to explore multiple viewpoints. By taking a constructive-developmental approach, the author demonstrates how students' ability to construct knowledge is intertwined with the development of their assumptions about knowledge itself and their role in creating it. She shows how the structure of constructive-developmental teaching hinges on three principles: validating students' ability to know, situating learning in students' experience, and defining learning as teachers and students mutually constructing meaning. The book also takes abstract pedagogical principles and translates them into practical approaches.--

This IBM® Redbooks® publication documents how IBM Platform Computing, with its IBM Platform Symphony® MapReduce framework, IBM Spectrum Scale (based Upon IBM GPFSTM), IBM Platform LSF®, the Advanced Service Controller for Platform Symphony are work together as an infrastructure to manage not just Hadoop-related offerings, but many popular industry offerings such as Apache Spark, Storm, MongoDB, Cassandra, and so on. It describes the different ways to run Hadoop in a big data environment, and demonstrates how IBM Platform Computing solutions, such as Platform Symphony and Platform LSF with its MapReduce Accelerator, can help performance and agility to run Hadoop on distributed workload managers offered by IBM. This information is for technical professionals (consultants, technical support staff, IT architects, and IT specialists) who are responsible for delivering cost-effective cloud services and big data solutions on IBM Power Systems™ to help uncover insights among client's data so they can optimize product development and business results.

Microbial extracellular polymeric substances (EPS) are the key components for the aggregation of microorganisms in biofilms, flocs and sludge. They are composed of polysaccharides, proteins, nucleic acids, lipids and other biological macromolecules. EPS provide a highly hydrated gel matrix in which microbial cells can establish stable synergistic consortia. Cohesion and adhesion as well as morphology, structure, biological function and other properties such as mechanical stability, diffusion, sorption and optical properties of microbial aggregates are determined by the EPS matrix. Also, the protection of biofilm organisms against biocides is attributed to the EPS. Their matrix allows phase separation in biofiltration and is also important for the degradation of particulate material which is of great importance for the self purification processes in surface waters and for waste water treatment.

The definitive book on steak has never been written-until now "Of all the meats, only one merits its own structure. There is no such place as a lamb house or a pork house, but even a small town can have a steak house." So begins Mark Schatzker's ultimate carnivorous quest. Fed up with one too many mediocre steaks, the intrepid journalist set out to track down, define, and eat the perfect specimen. His journey takes him to all the legendary sites of steak excellence-Texas, France, Scotland, Italy, Japan, Argentina, and Idaho's Pahsimeroi Valley-where he discovers the lunatic lengths steak lovers will go to consume the perfect cut. After contemplating the merits of Black Angus, Kobe, Chianina, and the prehistoric aurochs-a breed revived by the Nazis after four hundred years of extinction-Schatzker adopts his own heifer, fattens her on fruit, acorns, and Persian walnuts, and then grapples with ambivalence when this near-pet appears on his plate. Reminiscent of both Bill Bryson's and Bill Buford's writing, Steak is a warm, humorous, and wide-ranging read that introduces a wonderful new travel and food writer to the common table.
