*Haematology Diagnostic* haematology requires the assessment of clinical and laboratory data together with a careful morphological assessment of cells in blood, bone marrow and tissue fluids.

Subsequent investigations including flow cytometry, immunohistochemistry, cytogenetics and molecular studies are guided by the original morphological findings. These targeted investigations help generate a prompt unifying diagnosis.

*Haematology: From the Image to the Diagnosis* presents a series of cases illustrating how skills in morphology can guide the investigative process. In this book, the authors capture a series of images to illustrate key features to recognize when undertaking a morphological review and show how they can be integrated with supplementary information to reach a final diagnosis. Using a novel format of visual case studies, this text mimics 'real life' for the practising diagnostic haematologist – using brief clinical details and initial microscopic morphological triage to formulate a differential diagnosis and a plan for efficient and economical confirmatory investigation to deduce the correct final diagnosis. The carefully selected, high-quality photomicrographs and the clear, succinct descriptions of key features, investigations and results will help haematologists, clinical scientists, haematology

trainees and haematopathologists to make accurate diagnoses in their day-to-day work.
