 Embedded C Coding Standard Embedded C Coding Standard was developed to minimize bugs in firmware by fixating on practical rules that keep bugs out-while additionally ameliorating the maintainability and portability of embedded software. A C coding standard can avail keep bugs out of embedded software by leveraging prevalent language features and development tools. Embedded C Coding Standard - orrisrestaurant.com A C coding standard is a set of rules for source code that is adopted by a team of programmers working together on a project, such as the design of an embedded system. Programming teams and companies write down their C coding standards for a variety of reasons but often bicker internally about which rules to follow. Embedded C Coding Standard | Barr Group Barr Group's Embedded C Coding Standard was developed from the ground up to minimize bugs in firmware, by focusing on practical rules that keep bugs out, while also improving the maintainability and portability of embedded software. For example, out of the box, LDRA's static analysis engine is able to automatically enforce about 80% of the rules in the Embedded C Coding Standard (Michael Barr, 2009, Netrino). Some coding standard rules, such as those regarding the names of variables and functions or the contents of comments, can only be enforced by human code reviewers. How to enforce coding standards automatically - Embedded.com Boost code is generally very high-quality, is widely portable, and fills many important gaps in the C++ standard library, such as type traits and better binders. Some Boost libraries encourage coding practices which can hamper readability, such as metaprogramming and other advanced template techniques, and an excessively "functional" style of programming.
