 DNA array technology is a technique for studying gene expression by comparing samples of different genes. The result is an enormous amount of data that must be carefully analyzed in order for it to be useful and meaningful. This book examines both data analysis and techniques for ensuring optimal experimental conditions. The array approach has applications in a number of model systems, including development, learning and drug abuse. In addition, the technique has applications in a number of neurological disorders such as Alzheimer's disease, schizophrenia, multiple sclerosis, and neurological cancers.

In understanding human behavior, psychologists have long been interested in what motivates specific actions. Debates have pitted extrinsic motivators (e.g. rewards/punishment) against intrinsic motivation in attempting to determine what best motivates individuals. This book provides a summary view of what research has determined about both extrinsic and intrinsic motivation, and clarifies what questions remain unanswered. Divided into three sections, section I revisits the debate about the effects of extrinsic incentives or constraints on intrinsic motivation and creativity, and identifies theoretical advances in motivational research. Section II focuses on the hidden costs and benefits of different types of achievement goals on motivation and performance. Section III discusses theory and research findings on how extrinsic and intrinsic motivators may work in everyday life and over time. This book is of interest to researchers in psychology, education, and business, as well as to a wider audience interested in promoting optimal motivation and performance. Coverage in this book includes: * Debates and controversies in motivational research* Developmental nature of intrinsic and extrinsic motivation over time* Influences of parents, educators, and employers in facilitating motivation* Effect of achievement goals on learning and performance* The role of intrinsic and extrinsic motivation in self-regulation Key Features* Brings together major figures in the fields of motivation, education, and social psychology* Provides a mix of theory, basic and applied research* Presents research conducted both in laboratories and educational settings* Comprehensive chapters provide excellent reviews of previous literature as well as outlines important new directions* Provides different perspectives on controversial debates in a balanced, constructive manner

Party and Democracy questions why political parties today are held in such low estimation in advanced democracies. The first part of the volume reviews theoretical motivations behind the growing disdain for the political party. In surveying the parties' lengthy attempt to gain legitimacy, particular attention is devoted to the cultural and political conditions which led to their emergence on the ground' and then to their political and theoretical acceptance as the sole master in the chain of delegation. The second part traces the evolution of the party's organization and public confidence against the backdrop of the transition from industrial to post-industrial societies. The book suggests that, in the post-war period, parties shifted from a golden age of organizational development and positive reception by public opinion towards a more difficult relationship with society as it moved into post industrialism. Parties were unable to master societal change and thus moved towards the state to recover resources they were no longer able to extract from their constituencies. Parties have become richer and more powerful thanks to their interpenetration into the state, but they have paid' for their pervasive presence in society and the state with a declining legitimacy. Even if some changes have been introduced recently in party organizations to counteract their decline, they seem to have become ineffective; even worse, they have dampened democratic standing inside and outside parties, favouring plebiscitary tendencies. The party today is caught in a dramatic contradiction. It has become a sort of Leviathan with clay feet: very powerful thanks to the resources it gets from the state and to its control of the societal and state spheres, but very weak in terms of legitimacy and confidence in the eyes of the mass public. However, it is argued that there is still no alternative to the party. Democracy is still inextricably linked to the party

system.

The U.S. Environmental Protection Agency (EPA) has been considering a more stringent regulation of arsenic in water. A significant reduction in the maximum contaminant level (MCL) could increase compliance costs for water utilities. This book discusses the adequacy of the current EPA MCL for protecting human health in the context of stated EPA policy and provides an unbiased scientific basis for deriving the arsenic standard for drinking water and surface water. Arsenic in Drinking Water evaluates epidemiological data on the carcinogenic and noncarcinogenic health effects of arsenic exposure of Taiwanese populations and compares those effects with the effects of arsenic exposure demonstrated in other countries—including the United States. The book also reviews data on toxicokinetics, metabolism, and mechanism and mode of action of arsenic to ascertain how these data could assist in assessing human health risks from arsenic exposures. This volume recommends specific changes to improve the toxicity analyses and risk characterization. The implications of the changes for EPA's current MCL for arsenic are also described.

Since the publication of the first edition (1994) there have been rapid developments in the application of hydrology, geomorphology and ecology to stream management. In particular, growth has occurred in the areas of stream rehabilitation and the evaluation of environmental flow needs. The concept of stream health has been adopted as a way of assessing stream resources and setting management goals. *Stream Hydrology: An Introduction for Ecologists* Second Edition documents recent research and practice in these areas. Chapters provide information on sampling, field techniques, stream analysis, the hydrodynamics of moving water, channel form, sediment transport and commonly used statistical methods such as flow duration and flood frequency analysis. Methods are presented from engineering hydrology, fluvial geomorphology and hydraulics with examples of their biological implications. This book demonstrates how these fields are linked and utilised in modern, scientific river management. * Emphasis on applications, from collecting and analysing field measurements to using data and tools in stream management. * Updated to include new sections on environmental flows, rehabilitation, measuring stream health and stream classification. * Critical reviews of the successes and failures of implementation. * Revised and updated windows-based AQUAPAK software. This book is essential reading for 2nd/3rd year undergraduates and postgraduates of hydrology, stream ecology and fisheries science in Departments of Physical Geography, Biology, Environmental Science, Landscape Ecology, Environmental Engineering and Limnology. It would be valuable reading for professionals working in stream ecology, fisheries science and habitat management, environmental consultants and engineers.

Offering an interdisciplinary approach to narrative, this book investigates storyworlds and minds in narratives across media, from literature to digital games and reality TV, from online sadomasochism to oral history databases, and from horror to hallucinations. It addresses two core questions of contemporary narrative theory, inspired by recent cognitive-scientific developments: what kind of a construction is a storyworld, and what kind of mental functioning can be embedded in it? Minds and worlds become essential facets of making sense and interpreting narratives as the book asks how story-internal minds relate to the mind external to the storyworld, that is, the mind processing the story. With essays from social scientists, literary scholars, linguists, and scholars from interactive media studies answering these topical questions, the collection brings diverse disciplines into dialogue, providing new openings for genuinely transdisciplinary narrative theory. The wide-ranging selection of materials analyzed in the book promotes knowledge on the latest forms of cultural and social meaning-making through narrative, necessary for navigating the contemporary, mediated cultural landscape. The combination of theoretical reflection and empirical analysis makes this book an invaluable resource for scholars and advanced students in fields including literary studies, social sciences, art, media, and communication.
