How Boston radio station WBCN became the hub of the rock-and-roll, antiwar, psychedelic solar system. While San Francisco was celebrating a psychedelic Summer of Love in 1967, Boston stayed buttoned up and battened down. But that changed the following year, when a Harvard Law School graduate student named Ray Riepen founded a radio station that played music that young people, including the hundreds of thousands at Boston-area colleges, actually wanted to hear. WBCN-FM featured album cuts by

such artists as the Mothers of Invention, Aretha Franklin, and Cream, played by announcers who felt free to express their opinions on subjects that ranged from recreational drugs to the war in Vietnam. In this engaging and generously illustrated chronicle, Peabody Award-winning journalist and one-time WBCN announcer Bill Lichtenstein tells the story of how a radio station became part of a revolution in youth culture. At WBCN, creativity and countercultural politics ruled: there were no set playlists; news segments anticipated the satire of *The Daily Show*; on-air interviewees ranged from John and Yoko to Noam Chomsky; a telephone "Listener

Line” fielded questions on any subject, day and night. From 1968 to Watergate, Boston’s WBCN was the hub of the rock-and-roll, antiwar, psychedelic solar system. A cornucopia of images in color and black and white includes concert posters, news clippings, photographs of performers in action, and scenes of joyousness on Boston Common. Interwoven through the narrative are excerpts from interviews with WBCN pioneers, including Charles Laquidara, the “news dissector” Danny Schechter, Marsha Steinberg, and Mitchell Kertzman. Lichtenstein’s documentary WBCN and the American Revolution is available as a DVD sold separately.

'Working Memory, Thought, and Action' is the magnum opus of one of the most influential cognitive psychologists of the past 50 years. This new volume on the model he created (with Graham Hitch) discusses the developments that have occurred within the model in the past twenty years, and places it within a broader context. Working memory is a temporary storage system that underpins our capacity for coherent thought. Some 30 years ago, Baddeley and Hitch proposed a way of thinking about working memory that has proved to be both valuable and influential

in its application to practical problems. This book updates the theory, discussing both the evidence in its favour, and alternative approaches. In addition, it discusses the implications of the model for understanding social and emotional behaviour, concluding with an attempt to place working memory in a broader biological and philosophical context. Inside are chapters on the phonological loop, the visuo-spatial sketchpad, the central executive and the episodic buffer. There are also chapters on the relevance to working memory of studies of the recency effect, of work based on individual differences, and of neuroimaging

research. The broader implications of the concept of working memory are discussed in the chapters on social psychology, anxiety, depression, consciousness and on the control of action. Finally, Baddeley discusses the relevance of a concept of working memory to the classic problems of consciousness and free will. This new volume from one of the pioneers in memory research will doubtless emulate the success of its predecessor, and be a major publication within the psychological literature.

This handbook represents the interdisciplinary and international field of “cultural memory

studies” for the first time in one volume. Articles by renowned international scholars offer readers a unique overview of the key concepts of cultural memory studies. The handbook not only documents current research in an unprecedented way; it also serves as a forum for bringing together approaches from areas as varied as sociology, political sciences, history, theology, literary studies, media studies, philosophy, psychology, and neurosciences.

“Cultural memory studies” – as defined in this handbook – came into being at the beginning of the 20th century, with the works of Maurice Halbwachs on *mémoire collective*. In the course of the last two decades this

area of research has witnessed a veritable boom in various countries and disciplines. As a consequence, the study of the relation of “culture” and “memory” has diversified into a wide range of approaches. This handbook is based on a broad understanding of “cultural memory” as the interplay of present and past in sociocultural contexts. It presents concepts for the study of individual remembering in a social context, group and family memory, national memory, the various media of memory, and finally the host of emerging transnational lieux de mémoire such as 9/11. *Memory Notebook of Nursing* CRC Press

 “Oliver Sacks meets Stephen King”* in this propulsive, haunting journey into the life of the most studied human research subject of all time, the amnesic known as Patient H.M. For readers of *The Immortal Life of Henrietta Lacks* comes a story that has much to teach us about our relentless pursuit of knowledge. Winner of the PEN/E.O. Wilson

Literary Science Writing Award • Los Angeles Times Book Prize Winner NAMED ONE OF THE BEST BOOKS OF THE YEAR BY The Washington Post • New York Post • NPR • The Economist • New York • Wired • Kirkus Reviews • BookPage In 1953, a twenty-seven-year-old factory worker named Henry Molaison—who suffered from severe epilepsy—received a radical new version of the then-common lobotomy, targeting the most mysterious structures in the brain. The operation failed to eliminate Henry’s seizures, but it did have an unintended effect: Henry was left profoundly amnesic, unable to create long-term memories. Over the next sixty years, Patient H.M., as Henry

was known, became the most studied individual in the history of neuroscience, a human guinea pig who would teach us much of what we know about memory today. Patient H.M. is, at times, a deeply personal journey. Dittrich's grandfather was the brilliant, morally complex surgeon who operated on Molaison—and thousands of other patients. The author's investigation into the dark roots of modern memory science ultimately forces him to confront unsettling secrets in his own family history, and to reveal the tragedy that fueled his grandfather's relentless experimentation—experimentation that would revolutionize our

understanding of ourselves. Dittrich uses the case of Patient H.M. as a starting point for a kaleidoscopic journey, one that moves from the first recorded brain surgeries in ancient Egypt to the cutting-edge laboratories of MIT. He takes readers inside the old asylums and operating theaters where psychosurgeons, as they called themselves, conducted their human experiments, and behind the scenes of a bitter custody battle over the ownership of the most important brain in the world. Patient H.M. combines the best of biography, memoir, and science journalism to create a haunting, endlessly fascinating story, one that reveals the wondrous and

devastating things that can happen when hubris, ambition, and human imperfection collide. “An exciting, artful blend of family and medical history.”—The New York Times *Kirkus Reviews (starred review)

Women Mobilizing Memory, a transnational exploration of the intersection of feminism, history, and memory, shows how the recollection of violent histories can generate possibilities for progressive futures. Questioning the politics of memory-making in relation to experiences of vulnerability and violence, this wide-

ranging collection asks: How can memories of violence and its afterlives be mobilized for change? What strategies can disrupt and counter public forgetting? What role do the arts play in addressing the erasure of past violence from current memory and in creating new visions for future generations?

Women Mobilizing Memory emerges from a multiyear feminist collaboration bringing together an interdisciplinary group of scholars, artists, and activists from Chile, Turkey, and the United States. The essays in this book assemble and discuss a deep archive of works that activate memory across a variety of protest cultures, ranging from seemingly minor acts of defiance to broader

resistance movements. The memory practices it highlights constitute acts of repair that demand justice but do not aim at restitution. They invite the creation of alternative histories that can reconfigure painful pasts and presents. Giving voice to silenced memories and reclaiming collective memories that have been misrepresented in official narratives, *Women Mobilizing Memory* offers an alternative to more monumental commemorative practices. It models a new direction for memory studies and testifies to a continuing hope for an alternative future.
