From #1 New York Times bestselling author Sylvia Day comes a story of the ultimate seduction. . . .

Max Westin. Sex incarnate. She could smell it, feel it with his proximity. Everything about him was a little rough, a little gritty. He was a primitive creature. Just like her. He held her hand a little too long, his gaze, under thick lashes, clearly stating his intention to have her. To tame her. . . . "Victoria." Her name, just one word, but spoken with such possession she could almost feel the collar around her neck. "It's in your nature," he murmured. "The desire to be taken." In this game of cat and mouse, everything is an illusion, but the passion is as real as it gets. . . .

It's the real stories, not the publicists' confections, that concern Colin Escott. We hear Perry Como's story in his own words: it wasn't all smooth. We learn about the astonishing twists and turns in Roy Orbison's life, and the stories behind the songs we know so well. And we go down with Vernon Oxford, the last great honky tonk singer, who came to Nashville just a little too late. These are stories for anyone who loves what Escott calls "little songs from great sorrows." They will fascinate even the most casual fan of popular music, and they're told here in sympathetic, engaging, and illuminating prose.

Introduction to Human Nutrition World Bank Publications

Noncommunicable diseases (NCDs) are by far the major cause of death in lower-middle, upper-middle, and high-income countries; by 2015, they will also be the leading

cause of death in low-income countries. In addition to mortality, NCDs account for nearly half of the disease burden measured in disability-adjusted life years (DALYs) in low- and middle-income countries, and large increases in NCD-related DALYs are projected. Addressing this challenge will require policy makers to design and implement economic, health, and social policies to address the links between NCDs and poverty and to minimize the health and economic losses among the population. *Public Policy and the Challenge of Chronic Noncommunicable Diseases* provides a framework that policy makers can use to formulate their strategies. The authors point out that the most effective policy response will be twofold: to develop programs to avoid the looming NCD burden of disease to the extent possible-for example, through public health interventions and improved health care-and simultaneously to prepare to address the health system and economic pressures that will arise from the increase in NCDs due to the aging of populations. This book will

be of interest to governments, international organizations, universities, and research institutions focusing on health care, economic policy, public health, and poverty reduction strategies. Book jacket.

Road traffic collisions kill about 1.2 million people around the world every

year but they are largely neglected as a health and development issue, perhaps because they are still viewed by many as being beyond human control. Efforts to prevent road traffic injuries are hampered by a lack of human capacity. Policy-makers, researchers and practitioners need information on effective prevention measure and on how to develop, implement and evaluate such interventions. There is a need to train more specialists in road traffic injury prevention in order to address the growing problem of road traffic injuries at international levels.

Do you suffer from abdominal bloating a chronic, nagging cough or sore throat, post-nasal drip, a feeling of a lump in the back of your throat, allergies, or a shortness of breath? If so, odds are that you are experiencing acid reflux without recognizing the silent symptoms. In *The Acid Watcher Diet*, Dr Jonathan Aviv, one of the leading

authorities on the diagnosis and treatment of acid reflux disease, helps readers identify those silent symptoms and provides his proven solution for reducing whole-body acid damage quickly and easily. Even without the presence of heartburn or indigestion, more than 60 million people are suffering from acid-related disorders that are undetected or untreated – and leading to long-term health problems, including the rapid rise of esophageal cancer. Since there are no outward signs of acid damage and the typical symptoms might not be recognized, until now you might not have known how pervasive acid reflux is or that you have it. Dr Aviv's 28-day programme includes a two-phase eating plan, menu guide and recipes, and works to immediately neutralize acid, stabilize pH levels and relieve the inflammation at the root of acid reflux. Dr Aviv's Power of Five rule will help readers discover the key foods that offer fast relief, and his Daily Six will reveal the foods to avoid (onion, tomato, citrus and more).
