Proceedings of the Seventh Technical Conference on Artificial Insemination and Reproduction JHU Press

How can human beings be induced to sacrifice their lives—even one minute of their lives—for the sake of their group? This question, central to understanding the dynamics of social movements, is at the heart of this collection of original essays. The book is the first to conceptualize and illustrate the complex patterns of negotiation, struggle, borrowing, and crafting that characterize what the editors term "oppositional consciousness"—an empowering mental state that prepares members of an oppressed group to undermine, reform, or overthrow a dominant system. Each essay employs a recent historical case to demonstrate how oppositional consciousness actually worked in the experience of a subordinate group. Based on participant observation and interviews, chapters focus on the successful social movements of groups such as African Americans, people with disabilities, sexually harassed women, Chicano workers, and AIDS activists. Ultimately, Oppositional Consciousness sheds new light on the intricate mechanisms that drive the important social movements of our time. Contributors: Naomi Braine, Sharon Groch, Fredrick C. Harris, Jane Mansbridge, Anna-Maria Marshall, Aldon Morris, Marc Simon Rodriguez, Brett C. Stockdill, Lori G. Waite

AIDS has claimed the lives of more than 400,000 people in the United States, becoming the focus of intense social activism. Brett Stockdill reveals that people living with HIV/AIDS are often multiply oppressed - women of color, for example - and explores how interlocking oppressions fragment activism and thus impede AIDS prevention and intervention. Demonstrating that a unified approach to issues of race, class, gender, and sexuality can most effectively combat the AIDS epidemic, he highlights the critical link between social analysis and public policy.

Nickel Sulfide Ores and Impact Melts: Origin of the Sudbury Igneous Complex presents a current state of understanding on the geology and ore deposits of the Sudbury Igneous Complex in Ontario, Canada. As the first complete reference on the subject, this book explores the linkage between the processes of meteorite impact, melt sheet formation, differentiation, sulfide immiscibility and metal collection, and the localization of ores by magmatic and post-magmatic processes. The discovery of new ore deposits requires industry and government scientists and academic scholars to have access to the latest understanding of ore formation process models that link to the mineralization of their host rocks. The ore deposits at Sudbury are one of the world's largest ore systems, representing a classic case study that brings together very diverse datasets and ways of thinking. This book is designed to emphasize concepts that can be applied across a broad range of ore deposit types beyond Sudbury and nickel deposit geology. It is an essential resource for exploration geologists, university researchers, and government scientists, and can be used in rock and mineral analysis, remote sensing, and geophysical applications. Provides the only reference book to focus entirely on

the Sudbury Igneous Complex Brings together an understanding of ore deposit and impact melts as a basis for future exploration Authored by a leading expert on the geology of the Sudbury Igneous Complex with 35 years of experience working on nickel sulfide ore deposits

The document is comprised of papers presented at the Air Force Conference on Fatigue of Aircraft Structures and Materials, sponsored by the Air Force Flight Dynamics Laboratory (AFFDL) and the Air Force Materials Laboratory (AFML), Air Force Systems Command. The purpose of the Conference was to discuss technological advancements in fatigue and fracture theory. The Conference was comprised of ten technical sessions (including two panel discussions) entitled 'The Role of Materials in Structures'; 'Fundamentals I + II'; 'Criteria'; 'Fracture I + II'; 'Phenomena I + II'; 'Analysis'; 'Design and Service Experience'. A total of fifty-six technical papers were presented.

As unique as the city it describes, Annapolis, City on the Severn builds on the most recent scholarship and offers readers a fascinating portrait into the past of this great city.

This textbook provides the reader with a foundation in policy development and analysis and describes how policy, including legal mechanisms, is applied to marine environments around the world. It offers a systematic treatment of all aspects of marine policy, including environmental protection, fisheries, transportation, energy, mining and climate change. It starts with a biophysical overview of the structure and function of the marine environment with a particular emphasis on the challenges and opportunities of managing the marine environment. An overview of the creation and function of international law is then provided with a focus on international marine law. It explores the geographic and jurisdictional dimensions of marine policy, as well the current and anticipated challenges facing marine systems, including climate change-related impacts and resource over-exploitation. The book should appeal to senior undergraduate and graduate students and form a core part of the curriculum for marine affairs, science and policy courses. It will also provide supplementary reading for students taking a course in the law of the oceans, but is not aimed at legal specialists.

Asia has become the new battle ground for the war against HIV/AIDS. The magnitude of the potential public health problems caused by AIDS in this populous continent may become a catastrophic disaster. A 10% rate of prevalence of HIV-1 in India and China alone would mean more than 200 million people are infected with HIV. AIDS in Asia is useful as a comprehensive, up-to-date AIDS reference book for public health and medical professionals. This volume provides concrete information on the diagnosis, treatment, care, prevention and impact of AIDS. Part I contains 'Snapshots of HIV/AIDS in Asia.' Countries and regions included in this section are: Thailand, India, China, Japan, Vietnam, Laos, Cambodia, Myanmar, Malaysia, Indonesia, the Philippines, Pakistan, Nepal, Sri Lanka, Hawaii and the Pacific Islands, Hong Kong and Taiwan. Part II addresses the molecular epidemiology of HIV/AIDS. Part III deals with the diagnosis, surveillance and projected scenarios of the AIDS epidemic. Part IV outlines prevention efforts and treatment options. Part V provides an overview of the ongoing collaborative efforts involved in several different nations in the worldwide war against AIDS. This volume will be invaluable to all the public health professionals and researchers working in this field. "...the book is a useful addition to the HIV/AIDS literature." "AIDS in Asia offers a comprehensive, interesting overview of the epidemic there and of general issues that will influence its progression." -Roger Detels, MD, MS, University of California-Los Angeles The Journal of the American Medical Association, Book Review, 293:15

This volume vividly demonstrates the importance and increasing breadth of quantitative methods in the earth sciences. With contributions from an international cast of leading practitioners, chapters cover a wide range of state-of-the-art methods and applications, including computer modeling and mapping techniques. Many chapters also contain reviews and extensive bibliographies which serve to make this an invaluable introduction to the entire field. In addition to its detailed presentations, the book includes chapters on the history of geomathematics and on R.G.V. Eigen, the "father" of mathematical geology. Written to commemorate the 25th anniversary of the International Association for Mathematical Geology, the book will be sought after by both practitioners and researchers in all branches of geology.
