 Information Protocol The RIP Protocol
 (Routing Information Protocol) is, in a
 nutshell: • Designed to reach a stable
 routing table with the less Administrator
 management as possible. • The
 messages that routers send each other
 are sent to the multicast address to
 reduce the hosts processing load. Rip In
 Opnet RIP is a standard distance vector
 routing protocol and uses the distance
 form as a hop counter. It is a distance
 vector. By limiting the number of hop
 counts allowed in a route between the
 source and destination, RIP prevents the
 loop. In general, the maximum number
 of hops allowed for RIP is 15. BASED ON
 OPNET DESIGN OF RIP, OSPF AND EIGRP
 ROUTING PROTOCOLS Routing protocols
 are key elements of modern
 communication networks. Currently
 deployed dynamic routing protocols that
 are used to propagate network topology
 information to the neighboring
