Ecoe Ediciones  
This book takes a  
pedagogical approach  
that is participative and  
interactive, involving the  
case study method of  
learning. Chapters start  
with an Indian case study  
of a well known company.  
This is used as a capstone

case for the chapter. The  
student will find this an  
easy learning experience  
as data and additional  
information for these  
enterprises is readily  
available. The selection of  
such cases makes  
classroom learning truly  
suited to the Indian  
business environment. The  
value driven approach to  
Operations Management  
is used in structuring the  
text into three modules.

The first module discusses  
the infrastructure function  
of Operations  
Management.  
Infrastructure function is  
considered to be product,  
process, capacity and  
location. Module Two  
describes the structure of  
the operations function.  
This includes quality and  
other product  
transformation processes.  
Module Three focuses on  
the organization, people

and processes i.e. the job, the work, and the workplace. In addition, most of the mathematical techniques have been separated into supplements attached to the relevant chapters. Software solutions for the techniques have been explained in the text. Every mathematical technique is exemplified with a number of solved problems. Unlike many Production and Operations Management texts, this book covers E-commerce, Industrial Safety, Maintenance,

Environmental Management (Green Productivity) and new technological trends in the discipline. These sections should add to the significance of exploring how firms can gain competitive advantage and promote sustainable development at the same time. The last section of the book comprises of a selection of cases from The Indian Institute of Management at Ahmedabad. The cases encompass the entire spectrum of Indian Industry the private and

the public sectors, professional and family managed business organizations, service and manufacturing industries, single industry and conglomerates. The cases relate to Operations Strategy, Supply Chain Management, Capacity Planning, New Products, Manufacturing Technologies, etc. The Case Studies are of world class. Prof. Tirupati, one of the authors of the case studies, according to Management Science, has penned one of the top 100 management articles

in the 50 years. The book is comprehensive, lucid and easy to read and understand. It should be of great value both to students and faculty.

This exciting new textbook provides exceptional coverage of the essential topics taught in a modern operations management course. Its highly current coverage includes contemporary and relevant service theory and applications. Appropriate manufacturing applications and theory are included where relevant. The book's modern/strategic approach addresses OM from a cross-functional perspective, which views

operations as linked to all other functional areas of an organization, such as marketing and finance. The strategic approach takes into consideration the integration of technology and how it changes the way a firm operates. Recognition of this current trend is the main differentiating factor for this Collier/Evans text. The book provides equal coverage of manufacturing and services theory and applications, while placing an emphasis on the integration of the value

chain.
