Surprisingly, few studies have been made that address the possibilities of musical scales. This book is, to the best of my knowledge, the first of its kind to establish and examine a complete system of all conceivable scales. My intention is that this book be used as a reference tool for all musicians, as it provides a complete dictionary of all possible scale configurations.

David Bowie was one of the most important and influential artists to emerge from the 1970s and yet he remains one of the most elusive figures in rock. This book views his career through nearly three decades of popular cultural commentary. Giving full weight to Bowie's stage and screen career as well as his music, the book includes some contemporary articles from the British and American press and material written from the benefit of hindsight.

Gordon Burn offers a backstage look at The Elephant Man, Philip Norman pens a critique of Absolute Beginners, Lindsay Kemp reminisces on his years as Bowie's friend and mime teacher, Anne Rice and Jon Savage examine the question of Bowie and gender, and Craig Copetas catches a curious conversation between Bowie and William Burroughs. Other contributors include the late Marc Bolan, Michael Bracewell, Simon Frith, Pauline Kael, John Rockwell, Leslie Thomas and Ellen Willis.

Clearly demonstrates the specific characteristics that make for comprehensible, friendly and controllable places; 'Responsive Environments' - as opposed to the alienating environments often imposed today. By means of sketches and diagrams, it shows how they may be designed in to places or buildings. This is a practical book about architecture and urban design. It is most concerned with the areas of design which most frequently go wrong and impresses the idea that ideals alone are not enough. Ideals must be linked through appropriate design ideas to the fabric of the built environment itself. This book is a practical attempt to show how this can be done.
