Report on Class Actions Council of Europe

A part of Harper Perennial's special "Resistance Library" highlighting classic works that illuminate our times: A special edition reissue of Stanley Milgram's landmark examination of humanity's susceptibility to authoritarianism. "The classic account of the human tendency to follow orders, no matter who they hurt or what their consequences." — Washington Post Book World In the 1960s, Yale University psychologist Stanley Milgram famously carried out a series of experiments that forever changed our perceptions of morality and free will. The subjects—or "teachers"—were instructed to administer electroshocks to a human "learner," with the shocks becoming progressively more powerful and painful. Controversial but now strongly vindicated by the scientific community, these experiments attempted to determine to what extent people will obey orders from authority figures regardless of consequences. "Milgram's experiments on obedience have made us more aware of the dangers of uncritically accepting authority," wrote Peter Singer in the New York Times Book Review. With an introduction from Dr. Philip Zimbardo, who conducted

the famous Stanford Prison Experiment, Obedience to Authority is Milgram's fascinating and troubling chronicle of his classic study and a vivid and persuasive explanation of his conclusions.

Abstract Reasoning Tests Martinus Nijhoff Publishers

REDD+ must be transformational. REDD+ requires broad institutional and governance reforms, such as tenure, decentralisation, and corruption control. These reforms will enable departures from business as usual, and involve communities and forest users in making and implementing policies that affect them. Policies must go beyond forestry. REDD+ strategies must include policies outside the forestry sector narrowly defined, such as agriculture and energy, and better coordinate across sectors to deal with non-forest drivers of deforestation and degradation. Performance-based payments are key, yet limited. Payments based on performance directly incentivise and compensate forest owners and users. But schemes such as payments for environmental services (PES) depend on conditions, such as secure tenure, solid carbon data and transparent governance, that are often lacking and take time to change. This constraint reinforces the need for broad institutional and policy reforms. We must learn from the past. Many approaches to REDD+ now being considered are similar to previous efforts to conserve and better manage forests, often with

limited success. Taking on board lessons learned from past experience will improve the prospects of REDD+ effectiveness. National circumstances and uncertainty must be factored in. Different country contexts will create a variety of REDD+ models with different institutional and policy mixes. Uncertainties about the shape of the future global REDD+ system, national readiness and political consensus require flexibility and a phased approach to REDD+ implementation.

Mechanical Aptitude Test Council of Europe

In this study, the author addresses the questions of what constitutes the knowledge of language, and how this knowledge is acquired and used.

General Problems of Private International Law HarperCollins

The European Portfolio for Student Teachers of Languages is a tool for reflection and self-assessment of the didactic knowledge and skills necessary to teach languages. It builds on insights from the Common European Framework of Reference and the European Language Portfolio as well as the European Profile for Language Teacher Education. Four years after its initial publication it has been translated into twelve European and Asian languages. To meet widespread demand this ECML publication provides materials which support its implementation in teacher education. The book entitled Using the European Portfolio for Student Teachers of Languages presents examples, discussions and research findings of how the EPOSTL is used in initial teacher education courses, in bi-lateral teacher education programs and in teaching practice. The accompanying folder and flyer feature, amongst other things, guidelines for strategic measures for introducing the EPOSTL in a particular institution.

The International Law Commission at 50 : Proceedings of the United Nations Colloquium on Progressive Development and Codification of International Law Greenwood Publishing Group

This book challenges the predominant conceptions of the meaning and development of 'class consciousness'.

Concerted Development of Social Cohesion Indicators Martinus Nijhoff Publishers

The history of art from the early nineteenth century onward is commonly viewed as a succession of conflicts between innovative and established styles that culminated in the formalism and aesthetic autonomy of high modernism. In *Art and Crisis*, first published in 1948, Hans Sedlmayr argues that the aesthetic disjunctions of modern art signify more than matters of style and point to much deeper processes of cultural and religious disintegration. As Roger Kimball observes in his informative new introduction, *Art in Crisis* is as much an exercise in cultural or spiritual analysis as it is a work of art history. Sedlmayr's reads the art of the last two centuries as a fever chart of the modern age in its greatness and its decay. He discusses the advent of Romanticism with its freeing of the imagination as a conscious sundering of art from humanist and religious traditions with the aesthetic treated as a category independent of human need. Looking at the social purposes of architecture, Sedlmayr shows how the landscape garden, the architectural monument, and the industrial exhibition testified to a new relationship not only between man and his handiwork but also between man and the forces that transcend him. In these institutions man defies his inventive powers with which he hopes to master and supersede nature. Likewise, the art museum denies transcendence through a cultural leveling in which Heracles and Christ become brothers as objects of aesthetic contemplation. At the center of *Art in Crisis* is the insight that, in art as in life, the

pursuit of unqualified autonomy is in the end a prescription for disaster, aesthetic as well as existential. Sedlmayr writes as an Augustinian Catholic. For him, the underlying motive for the pursuit of autonomy is pride. The lost center of his subtitle is God. The dream of autonomy, Sedlmayr argues, is for finite, mortal creatures, a dangerous illusion. The book invites serious analysis from art critics

Yearbook of the International Law Commission Springer Science & Business Media

Through language we show who we are and where we belong. In the workplace context this includes the way we construct ourselves as the team leader, meeting chair, a good colleague, the judge, a teacher or researcher. *Constructing Identities at Work* presents cutting edge research on the process of identity construction in professional and institutional contexts, from corporate workplaces, to courtrooms, classrooms, and academia. The authors illustrate the range of foci, methodologies and approaches prevalent in the newly established field of workplace discourse, demonstrating how interactants do identity work and how identity is 'indexed' (often in subtle ways) in workplace discourse. Moving beyond unhelpful static universalities about how all women, all English-speakers, or all old people behave linguistically, each of the authors emphasises the contextualised nature of our everyday lives and the ways in which we negotiate and renegotiate our emerging identities with others. Among the chapters there are examples of a range of different theoretical approaches to identity in linguistics, from the prevalent social constructionist lens to the micro-level detail accessible through Conversation Analysis, and the quantitative analysis offered by corpus linguistics.

An International Bill of the Rights of Man General Aptitude and Abilities

First published in 1945, this is one of the seminal works on international human rights law, written by a legendary scholar in the field. This republication, featuring a new introduction by Professor Philippe Sands, QC, once again makes this book available to scholars and students.

National Strategy and Policy Options A&C Black

The International Court of Justice (in French, the Cour internationale de justice), also commonly known as the World Court or ICJ, is the oldest, most important and most famous judicial arm of the United Nations. Established by the United Nations Charter in 1945 and based in the Peace Palace in the Hague, the primary function of the Court is to adjudicate in disputes brought before it by states, and to provide authoritative, influential advisory opinions on matters referred to it by various international organisations, agencies and the UN General Assembly. This new work, by a leading academic authority on international law who also appears as an advocate before the Court, examines the Statute of the Court, its procedures, conventions and practices, in a way that will provide invaluable assistance to all international lawyers. The book covers matters such as: the composition of the Court and elections, the office and role of ad hoc judges, the significance of the occasional use of smaller Chambers, jurisdiction, the law applied, preliminary objections, the range of contentious disputes which may be submitted to the Court, the status of advisory opinions, relationship to the Security Council, applications to intervene, the status of judgments and remedies. Referring to a wealth of primary and secondary sources, this work provides international lawyers with a readable, comprehensive and authoritative work of reference which will greatly enhance understanding and knowledge of the ICJ. The book has been translated and lightly updated from the French original, R Kolb, *La Cour internationale de Justice* (Paris, Pedone, 2013), by Alan Perry, Solicitor of the Senior Courts of England and Wales. Winner of the 2014 American Society of International Law Certificate of Merit for High Technical Craftsmanship and Utility to Practising Lawyers and Scholars: 'Robert Kolb's International Court of Justice provides a magisterial, lucid study of its subject. The breadth and depth of the treatment are impressive: Kolb takes the reader from the history of the Court, to its role in international society, to the more technical questions concerning its composition, powers and procedures, to the development of its jurisprudence, and to its future. The finely grained discussion provides much more than a mere

survey of the Court's constitutive instruments and decisions. It engages the Court as an institution and asks how it actually operates, and secures efficacy and authority in doing so. The book's careful and detailed coverage of the Court's legal framework and operation will benefit practitioners and scholars alike. There is no doubt that Kolb's volume immediately takes a place among the authoritative references on the Court.' ASIL Book Awards Committee

The International Court of Justice Routledge

This brand new, revised and expanded edition is aimed at all candidates planning to sit European institution competitions and who wish to prepare as effectively as possible for the abstract reasoning test. Abstract reasoning questions are presented as series of diagrams containing geometric shapes which are repeated or modified according to a logical sequence. Candidates have to identify the underlying logic and find the diagram that completes the series. Abstract reasoning tests call for skills that candidates do not normally use in everyday life: the ability to visualise geometric transformations (rotations, symmetries, etc), an aptitude to spot similarities between complex shapes, etc. We are all capable of developing these skills. It is not a question of intelligence, but of learning. Entry competitions for European institutions are highly selective. Success in the abstract reasoning test is, above all, a matter of method and training. This book can significantly increase your chances of success. It includes: - a detailed methodology illustrated with numerous examples; - 9 tests of 20 questions each, arranged by level of difficulty; - a detailed explanation of the answer to each question. The questions in this book are similar to those set in the competitions run by EPSO since 2015. They are different from those in previous editions and from our online test questions.

Contre-mémoire CUP Archive

Rarely do research paths diverge and converge as neatly and productively as the paths exemplified by the two efforts contained in this book. The story behind these researches is worth recounting. The story, as far as I'm concerned, starts back in the Fall of 1976, when John Laird and Paul Rosenbloom, as new graduate students in computer science at Carnegie-Mellon University, joined the Instructible Production System (IPS) project (Rychener, Forgy, Langley, McDermott, Newell, Ramakrishna, 1977; Rychener & Newell, 1978). In those days, production systems were either small or special or both (Newell, 1973; Shortliffe, 1976). Mike Rychener had just completed his thesis (Rychener, 1976), showing how production systems could effectively and perspicuously program the full array of artificial intelligence (AI) systems, by creating versions of Studell (done in an earlier study, Rychener 1975), EPAM, GPS, King-Pawn-King endgames, a toy-blocks problem solver, and a natural-language input system that connected to the blocks-world system.

Constructing Identities at Work CRC Press

Why is it that all interpretations are possible, and none is true? That some interpretations are just, but some are false? Lecerclé draws on the resources of pragmatics, literary theory and the philosophy of language to propose a new theory of literary, but also of face-to-face, dialogue that charts the interaction between the five participants in the fields of dialogue and/or interpretation: author, reader, text, language and encyclopaedia. Interpretation is taken through its four stages, from glossing and enigma solving to translation and intervention.
