Written in an easy-to-grasp language, the book brings to light the various topics pertaining to Web engineering at one place in a comprehensive manner. The text, organized in eleven chapters, enables its readers to analyze, model, design, code, test and maintain their Web sites. Through its systematic presentation of topics, i.e., from basic level to advanced level, the book apprises the readers with the finer points of the various phases of Web development life cycle like Web analysis, Web design, Web coding (Web technologies), Web testing and Web maintenance. The book is adaptive enough for practical implementation of the concepts, thereby allowing its readers to avoid or overcome hacking, to master client-side and server-side programming and to develop good-quality Web applications. Using explicit descriptions and scripting languages like VBScript, JavaScript and much more, this book is a must-have book for all those who are associated with the field of Web engineering.

A new personalized way to find the

perfect job—while staying calm during the process. You are so much more than a resume or job application, but how can you communicate that to your potential employer? You need to learn to ask the right questions, stop using job sites, and start doing the work that actually counts. Based on information gained from over 400,000 individuals who have used these exercises, this book reveals career expert Dev Aujla's tried-and-tested method for job seekers at every stage of their career. Filled with anecdotes and advice from professionals ranging from a wilderness guide to an architect, it includes quick-step exercises that help you avoid the common pitfalls of navigating a modern career. Whether you've just decided to start the hunt or you're gearing up for a big interview, *50 Ways to Get a Job* will keep you poised, on-track, and motivated right up to landing your dream career.

The scope of image processing and recognition has broadened due to the gap in scientific visualization. Thus, new imaging techniques have developed, and it is imperative to study this progression for optimal utilization. Big Data Analytics for Satellite Image Processing and Remote Sensing is a critical scholarly resource that examines the challenges and difficulties of implementing big data in image processing for remote sensing and related areas. Featuring coverage on a broad range of topics, such as distributed computing, parallel processing, and spatial data, this book is

geared towards scientists, professionals, researchers, and academicians seeking current research on the use of big data analytics in satellite image processing and remote sensing.

This book is a comprehensive & authentic textbook on 'Cyber Crimes & Laws'. This book aims to fulfill the requirement of the following students • B.Com./B.Com. (Hons.) under CBCS Programme □ B.Com: Semester-III | Paper BC 3.4 (B) | Cyber Crimes and Laws □ B.Com. (Hons.): Semester-IV | Paper BCH 4.5(F) | Cyber Crimes and Laws • Non-Collegiate Women's Education Board • School of Open Learning of University of Delhi • Various Central Universities throughout India. The Present Publication is the 4th Edition, authored by Sushma Arora & Raman Arora, with the following noteworthy features: • The subject-matter is presented in a simple, systematic method along with comprehensive explanation of the concept and theories underlying basic financial accounting. • [Student-Oriented Book] This book has been developed, keeping in mind the following factors: □ Interaction of the author/teacher with his/her students in the class-room □ Shaped by the author/teachers experience of teaching the subject-matter at different levels □ [Specific Emphasis] Reaction and responses of students have been incorporated at different places in the book • [Comprehensive Coverage of the Laws] with interesting examples/case studies derived from landmark rulings • [Test Question, True/False Statements & Projects] are given at the end of each chapter to provide students a thorough practice in solving examination

questions • Contents of this book is as follows: □ Unit I – Cyber Crimes • Cyber Crimes: Meaning, Categories and Kinds □ Unit II – Definitions under IT Act, 2000 and Contemporary Business Issues in Cyber Space □ Unit III – Electronic Records □ Unit IV – Regulatory Framework □ Unit V – Case Laws □ Past Examination Papers • B.Com. CBCS SEM-III (November 2016) • B.Com. (H) CBCS SEM-IV (May-June 2017) • B.Com. (H) CBCS SEM-IV (May-June 2018) • B.Com. CBCS SEM-III (November 2018) • BA (Prog.) SEM-III (November 2018) • B.Com. SEM-III (November 2019) • BA (Prog.) SEM-III (November 2019) • B.Com. CBCS SEM-III (December 2020) *An Algorithmic Approach* Springer Nature This volume gathers the latest advances, innovations, and applications in the field of geographic information systems and unmanned aerial vehicle (UAV) technologies, as presented by leading researchers and engineers at the 1st International Conference on Unmanned Aerial System in Geomatics (UASG), held in Roorkee, India on April 6-7, 2019. It covers highly diverse topics, including photogrammetry and remote sensing, surveying, UAV manufacturing, geospatial data sensing, UAV processing, visualization, and management, UAV applications and regulations, geoinformatics and geomatics. The contributions, which were selected by means of a rigorous international peer-review process, highlight numerous exciting ideas that will spur novel research directions and foster multidisciplinary collaboration among different specialists. An Applied Orientation S. Chand Publishing Cognitive Computing for Human-Robot Interaction: Principles and Practices explores the efforts that should

ultimately enable society to take advantage of the often-heralded potential of robots to provide economical and sustainable computing applications. This book discusses each of these applications, presents working implementations, and combines coherent and original deliberative architecture for human-robot interactions (HRI). Supported by experimental results, it shows how explicit knowledge management promises to be instrumental in building richer and more natural HRI, by pushing for pervasive, human-level semantics within the robot's deliberative system for sustainable computing applications. This book will be of special interest to academics, postgraduate students, and researchers working in the area of artificial intelligence and machine learning. Key features: Introduces several new contributions to the representation and management of humans in autonomous robotic systems; Explores the potential of cognitive computing, robots, and HRI to generate a deeper understanding and to provide a better contribution from robots to society; Engages with the potential repercussions of cognitive computing and HRI in the real world. Introduces several new contributions to the representation and management of humans in an autonomous robotic system Explores cognitive computing, robots and HRI, presenting a more in-depth understanding to make robots better for society Gives a challenging approach to those several repercussions of cognitive computing and HRI in the actual global scenario

As the amount of accumulated data across a variety of fields becomes harder to maintain, it is essential for a new generation of computational theories and tools to assist humans in extracting knowledge from this rapidly growing digital data. Global Trends in Intelligent Computing Research and Development brings together recent advances and in depth knowledge in the fields of knowledge representation and computational intelligence. Highlighting the theoretical advances and their applications to real life problems, this book is an essential tool for researchers, lecturers, professors, students, and developers who have seek insight into knowledge representation and real life applications.

Successful R.U.L.E. to lead an effective life
 A simple R.U.L.E. can change your life for the better. Become a

programmer of your own life, write the script, act on it and evolve. Breathe love, respect your body, understand the complexities around and evolve an action plan to enjoy every moment of life and grow. The book deals with the realities of life, certain myths and facts and shares the simple process of R.U.L.E. to make things happen in life and succeed. There is more in our lives and within us which we fail to explore, thus we fall prey to circumstances and/or situations and make a mess of our lives. The process of R.U.L.E. is meant to make your inner self strong enough, based on four fundamental principles and guide you to enjoy this process, to lead a balanced and an effective life. The brief eventful and rich life story of Sushila Tai Kashikar shared in the book itself should be more than enough for you to inculcate the time tested, eternally professed and practiced way of life to rise above all challenges in life and evolve to rule the hearts, minds and souls alike and enjoy the beautiful journey of your life.

International Conference on Wireless, Intelligent, and Distributed Environment for Communication CRC Press

Observing the environment and recognising patterns for the purpose of decision making is fundamental to human nature. This book deals with the scientific discipline that enables similar perception in machines through pattern recognition (PR), which has application in diverse technology areas. This book is an exposition of principal topics in PR using an algorithmic approach. It provides a thorough introduction to the concepts of PR and a systematic account of the major topics in PR besides reviewing the vast progress made in the field in recent times. It includes basic techniques of PR, neural networks, support vector

machines and decision trees. While theoretical aspects have been given due coverage, the emphasis is more on the practical. The book is replete with examples and illustrations and includes chapter-end exercises. It is designed to meet the needs of senior undergraduate and postgraduate students of computer science and allied disciplines.

NETWORK SECURITY AND MANAGEMENT Cambridge University Press

This book provides a thorough understanding of the integration of computational intelligence with information retrieval including content-based image retrieval using intelligent techniques, hybrid computational intelligence for pattern recognition, intelligent innovative systems, and protecting and analysing big data on cloud platforms. The book aims to investigate how computational intelligence frameworks are going to improve information retrieval systems. The emerging and promising state-of-the-art of human-computer interaction is the motivation behind this book. The book covers a wide range of topics, starting from the tools and languages of artificial intelligence to its philosophical implications, and thus provides a plethora of theoretical as well as experimental research, along with surveys and impact studies. Further, the book aims to showcase the basics of information retrieval and computational intelligence for beginners, as well as their integration, and challenge discussions for existing practitioners, including using hybrid application of augmented reality, computational intelligence techniques for recommendation systems in big data, and a fuzzy-based approach for characterization and identification of

sentiments.

An A to Z Catalog of Innovative Spices and Flavorings Designed to be a practical tool for the many diverse professionals who develop and market foods, the Handbook of Spices, Seasonings, and Flavorings combines technical information about spices—forms, varieties, properties, applications, and quality specifications — with information about trends, spice history, and the culture behind their cuisines. The book codifies the vast technical and culinary knowledge for the many professionals who develop and market foods. While many reference books on spices include alphabetized descriptions, the similarity between this book and others ends there. More than just a list of spices, this book covers each spice's varieties, forms, and the chemical components that typify its flavor and color. The author includes a description of spice properties, both

chemical and sensory, and the culinary information that will aid in product development. She also explains how each spice is used around the world, lists the popular global spice blends that contain the spice, describes each spice's folklore and traditional medicine usage, and provides translations of each spice's name in global languages. New to this edition is coverage of spice labeling and a chapter on commercial seasoning formulas. Going beyond the scope of most spice books, this reference describes ingredients found among the world's cuisines that are essential in providing flavors, textures, colors, and nutritional value to foods. It explores how these ingredients are commonly used with spices to create authentic or new flavors. The author has created a complete reference book that includes traditionally popular spices and flavorings as well as those that are emerging in the US to create authentic or fusion products. Designed to help you meet the challenges and demands of today's dynamic marketplace, this book is a complete guide to developing and marketing successful products.

This book presents the proceedings of the International Conference on Wireless Intelligent and Distributed Environment for Communication (WIDECOM 2018), organized by SRM University, NCR Campus, New Delhi, India, February 16-18, 2018. The conference focuses on challenges with respect to the dependability of integrated applications and intelligence-driven security threats against the platforms supporting these applications. The WIDECOM 2018 proceedings features papers addressing issues related to the new dependability

paradigms, design, control, and management of next generation networks, performance of dependable network computing and mobile systems, protocols that deal with network computing, mobile/ubiquitous systems, cloud systems, and Internet of Things (IoT) systems. The proceeding is a valuable reference for researchers, instructors, students, scientists, engineers, managers, and industry practitioners, in industry, in the aforementioned areas. The book's structure and content is organized in such a manner that makes it useful at a variety of learning levels. Presents the proceedings of the International Conference on Wireless Intelligent and Distributed Environment for Communication (WIDECOM 2018), organized by SRM University, NCR Campus, New Delhi, India, February 16-18, 2018; Includes an array of topics related to new dependability paradigms, design, control, and management of next generation networks, performance of dependable network computing and mobile systems, protocols that deal with network computing, mobile/ubiquitous systems, cloud systems, and Internet of Things (IoT) systems; Addresses issues related to the design and performance of dependable network computing and systems and to the security of these systems.

Mobile commerce, or M-commerce, is booming as many utilize their mobile devices to complete transactions ranging from personal shopping to managing and organizing business operations. The emergence of new technologies such as money sharing and transactional applications have revolutionized the way we do business. Wholeheartedly adopted

by both the business world and consumers, mobile commerce has taken its seat at the head of the mobile app economy. Securing Transactions and Payment Systems for M-Commerce seeks to present, analyze, and illustrate the challenges and rewards of developing and producing mobile commerce applications. It will also review the integral role M-commerce plays in global business. As consumers' perceptions are taken into account, the authors approach this burgeoning topic from all perspectives. This reference publication is a valuable resource for programmers, technology and content developers, students and instructors in the field of ICT, business professionals, and mobile app developers.

Proceeding of International Conference on Computational Science and Applications CRC Press

Written in an easy-to-understand style, this textbook, now in its third edition, continues to discuss in detail important concepts and major developments in network security and management. It is designed for a one-semester course for undergraduate students of Computer Science, Information Technology, and undergraduate and postgraduate students of Computer Applications. Students are first exposed to network security principles, organizational policy and security infrastructure, and then drawn into some of the deeper issues of cryptographic algorithms and protocols underlying network security applications. Encryption methods, secret key and public key cryptography, digital signature and other security mechanisms are emphasized. Smart card, biometrics, virtual private networks, trusted operating systems, pretty good privacy, database security, and intrusion detection systems are

comprehensively covered. An in-depth analysis of technical issues involved in security management, risk management and security and law is presented. In the third edition, two new chapters—one on Information Systems Security and the other on Web Security—and many new sections such as digital signature, Kerberos, public key infrastructure, software security and electronic mail security have been included. Additional matter has also been added in many existing sections. KEY FEATURES :

Extensive use of block diagrams throughout helps explain and clarify the concepts discussed. About 250 questions and answers at the end of the book facilitate fruitful revision of the topics covered. Includes a glossary of important terms. KEY FEATURES : Extensive use of block diagrams throughout helps explain and clarify the concepts discussed.
