This book deals with the effectiveness and the capability of microfinance institutions (MFIs) to enhance women's livelihoods and empowerment and to mitigate the effects of HIV and AIDS in Côte d'Ivoire. The results show that MFI credit causes positive and negative effects. MFI credit has improved incomes, the level of farm production and human and social capital. MFI credit has also enhanced women's decision-making power within households due to their new ability to contribute to the improvement of the household standard of living. Furthermore, women's empowerment regarding the demand for and the use of credit give them more opportunity to obtain MFI credit. Despite the positive effects of MFIs on women's income, this publication shows that loan

repayment was not successful among some female borrowers due to the fact that the loan has not been used for investment purposes. For MFIs, the diversion of loans can endanger their functioning and sustainability and therefore their effectiveness in rural areas. Regarding HIV, this book highlights the diversity and the specificity of the way HIV-affected individuals are financially supported by credit institutions. Both the direct and indirect effects of HIV and AIDS on women's livelihood and MFIs are analysed.

Looking Into the Earth comprehensively describes the principles and applications of both 'global' and 'exploration' geophysics on all scales. It forms an introduction to geophysics suitable for those who do not necessarily intend to become professional geophysicists, including geologists, civil engineers, environmental scientists, and field archaeologists. The book is organised into two parts: Part 1 describes the geophysical methods, while Part 2 illustrates their use in a number of extended case histories. Mathematical and physical principles are introduced at an elementary level, and then developed as necessary. Student questions and exercises are included at the end

of each chapter. The book is aimed primarily at introductory and intermediate university students taking courses in geology, earth science, environmental science, and engineering. It will also form an excellent introductory textbook in geophysics departments, and will help practising geologists, archaeologists and engineers understand what geophysics can offer their work.

*Ayer's American Almanac* Lippincott Williams & Wilkins

The Second Edition has been rewritten to provide additional coverage of topics such as urban development and third world cities as well as social issues including homelessness, jobs/housing mismatch and transportation disadvantages. It has also been updated with 1990 Census data.

Lab Manual for Health Assessment in Nursing, 5e serves as a laboratory manual and a study guide for the student. Each chapter of the lab manual corresponds to a chapter in the main textbook assisting students with comprehending and applying the theoretical content. Students will fully develop their assessment skills using the new interview guides and assessment guides. Students will also develop independence and readiness for test-taking by answering questions designed to

hone these skills. Critical thinking skills are further developed when students participate in the Critical Thinking and Case Study activities.

Governments the world over fret continuously about the low level of transfer of technology, especially within their own countries. The general problem is military to industry although the variations are numerous. Problems of presentation, offering and support complicate an already byzantine world. Yet somewhere within this dilemma lie the seeds of tomorrow's economic uptick. Besides the nontrivial problems involved here, the reluctance of the people having the technology to share it with someone who can profit from it, stands out. This book presents the issues and offers a comprehensive bibliography for easy access.
