Dying to Know You Rock Point

Chez Panisse is a restaurant in Berkeley, California, run by Alice Waters and her large group of friends. Her daughter Fanny's stories of this busy place are a friendly and funny introduction to the delights of real restaurant life, and her recipes show how easy and inexpensive it is to make good food with basic ingredients and simple techniques. Opening up the magic world of cooking to children, Alice Waters describes, in the words of seven-year-old Fanny, the path food travels from the garden to the kitchen to the table. Teaching kids where food really comes from not just from the market but from farms and people who care about the earth, Fanny at Chez Panisse has lessons on the importance of eating with your hands, of garlic and of composting and recycling. It is also a delightful beginner's cookbook with 46 recipes that will tempt children into the desire to cook and eat with whole hearts, alert minds and all the senses. From banana milkshakes and green apple sherbet to cherry tomato pasta and black beans and sour cream, as well as spaghetti and meatballs, french fries and pizza, there is something here for every child to prepare and enjoy.

Beet-Sugar Handbook Yale University Press

First published in 1891, Pellegrino Artusi's *La scienza in cucina e l'arte di mangiar bene* has come to be recognized as the most significant Italian cookbook of modern times. It was reprinted thirteen times and had sold more than 52,000 copies in the years before Artusi's death in 1910, with the number of recipes growing from 475 to 790. And while this figure has not changed, the book has consistently remained in print. Although Artusi was himself of the upper classes and it was doubtful he had ever touched a kitchen utensil or lit a fire under a pot, he wrote the book not for professional chefs, as was the nineteenth-century custom, but for middle-class family cooks: housewives and their domestic helpers. His tone is that of a friendly advisor – humorous and nonchalant. He indulges in witty anecdotes about many of the recipes, describing his experiences and the historical relevance of particular dishes. Artusi's masterpiece is not merely a popular cookbook; it is a landmark work in Italian culture. This English edition (first published by Marsilio Publishers in 1997) features a delightful introduction by Luigi Ballerini that traces the fascinating history of the book and explains its importance in the context of Italian history and politics. The illustrations are by the noted Italian artist Giuliano Della Casa.

Being women provided them with a particular perspective, expressed first-hand through their letters. Dalton shows how Lespinasse, Roland, Renier Michiel, and Mosconi grappled with differences of ideology, social status, and community, often through networks that mixed personal and professional relations, thus calling into question the actual separation between public and private spheres. Building on the work of Dena Goodman and Daniel Gordon, Dalton shows how a variety of conflicts were expressed in everyday life and sheds new light on Venice as an important eighteenth-century cultural centre.

Martha Stewart's Cooking School (Enhanced Edition) Editions du Chêne

A kitchen is no different from most science laboratories and cookery may properly be regarded as an experimental science. Food preparation and cookery involve many processes which are well described by the physical sciences. Understanding the chemistry and physics of cooking should lead

to improvements in performance in the kitchen. For those of us who wish to know why certain recipes work and perhaps more importantly why others fail, appreciating the underlying physical processes will inevitably help in unravelling the mysteries of the "art" of good cooking. Strong praise from the reviewers - "Will be stimulating for amateur cooks with an interest in following recipes and understanding how they work. They will find anecdotes and, sprinkled throughout the book, scientific points of information... The book is a pleasant read and is an invitation to become better acquainted with the science of cooking." - NATURE "This year, at last, we have a book which shows how a practical understanding of physics and chemistry can improve culinary performance... [Barham] first explains, in a lucid non-textbooky way, the principles behind taste, flavour and the main methods of food preparation, and then gives fool-proof basic recipes for dishes from roast leg of lamb to chocolate soufflé." - FINANCIAL TIMES WEEKEND "This book is full of interesting and relevant facts that clarify the techniques of cooking that lead to the texture, taste and aroma of good cuisine. As a physicist the author introduces the importance of models in preparing food, and their modification as a result of testing (tasting)." - THE PHYSICIST "Focuses quite specifically on the physics and food chemistry of practical domestic cooking in terms of real recipes... Each chapter starts with an overview of the scientific issues relevant to that food group, e.g. toughness of meat, thickening of sauces, collapse of sponge cakes and soufflés. This is followed by actual recipes, with the purpose behind each ingredient and technique explained, and each recipe followed by a table describing some common problems, causes and solutions. Each chapter then ends with suggested experiments to illustrate some of the scientific principles exploited in the chapter." - FOOD & DRINK NEWSLETTER

Explore the hyperlocal approach of acclaimed chef Norbert Niederkofler, from his home in South Tyrol in the Italian Alps to the world and back. Norbert Niederkofler has dedicated his life and work to South Tyrol's culture and cuisine. He translates the beauty and vivid character of the mountains into his dishes at St. Hubertus, the only Michelin 3-starred restaurant with completely regional cuisine. Niederkofler's philosophy, summarized as "Cook the Mountain," is to choose local and seasonal ingredients only after talking to the producers and growers in person and to honor the ingredients by keeping food waste to a minimum. In the first volume of this 2-book set, brilliant photographs reveal both unspoiled landscapes and the agricultural and architectural changes humans have made in the past millennia. Striking portraits of locals capture the people and producers Niederkofler works with. Breathtaking food photography conveys the stunning ingredients and creations that Niederkofler develops. The second volume includes 80 of Niederkofler's recipes, divided into the four seasons to reflect his ethos of sustainability. Taken together, *Cook the Mountain* showcases the unique terroir and cuisine of South Tyrol through the eyes of Niederkofler, who has embraced his home and given it a new culinary identity.
