This book aims to meet the demands on teaching and learning in the twenty-first century, and in specific, how teacher education may transform pedagogical approaches and didactic methods to support future teachers in enhancing needful skills. In particular, it focuses on the pedagogical approach of Storyline, and how a Storyline can be applied in teacher education. It argues that

teacher education benefits from the potency of various disciplines while applying an interdisciplinary methodology. Storyline is a problem-based, cross-curricular approach, based on learning through an evolving narrative, created in collaboration between teacher and students. It includes a variety of didactic tools, and inclusiveness towards

different learners. Using Storyline in teacher education arranges for teacher educators to integrate alternative structures, that enable interdisciplinary cooperation and topic-based teaching. The authors have incorporated Storyline in many different ways, which contextualizes throughout the book. The book provides an overview of Storyline and introduces improved and new

theoretical perspectives on this approach, including many practical examples. **På vei** Nordic Council of Ministers A very funny, illustrated chapter book about how Kurt stops being the nicest man in the world. Kurt is a truck driver. He's been a truck driver for many years. Almost ever since he was a boy. He's always been a very kind man, until... One day Kurt rescues a man

who sleepwalks off the pier, and he gets rewarded with a diamond as big as a football. But what use is a diamond? Kurt sells it and gets 50 million dollars. With all that money, it is perhaps not surprising that Kurt turns evil. *Read for pleasure at your level, expand your vocabulary and learn Norwegian the fun way!* Lulu Press, Inc

This book is open access under a CC BY NC ND 4.0 license. This open access book discusses how Norwegian shipping companies played a crucial role in global shipping markets in the 20th century, at times

transporting more than ten per cent of world seaborne trade. Chapters explore how Norway managed to remain competitive, despite being a high labour-cost country in an industry with global competition. Among the features that are emphasised are market developments, business strategies and political decisions The Norwegian experience was shaped by the main

breaking points in 20th century world history, such as the two world wars, and by long-term trends, such as globalization and liberalization. The shipping companies introduced technological and organizational innovations to build or maintain a competitive advantage in a rapidly changing world. The growing importance of offshore petroleum exploration in the North Sea

from the 1970s was both a threat and an opportunity to the shipping companies. By adapting both business strategies and the political regime to the new circumstances, the Norwegian shipping sector managed to maintain a leading position internationally.

Statistics are often seen as simple, straightforward, and objective descriptions of society. However, what we choose to count, what we choose not to count, who does the counting, and the categories and values we choose to apply when

counting, matter. This volume addresses the ways in which statistics and numbers are gathered and applied in social science research. The contributors argue that we must become more aware of the power and the limitations of statistics. Learning statistics needs to be about more than simply mastering the techniques of using the tool; it needs to also be about learning the dangers of that tool and learning to

control it within social and ethical bounds. These dangers lie in the routines through which statistics are applied; the discourses from which they emerge and into which they are deployed; the power relations created by those discourses; and the assumptions, meanings, and categories statistics carry with them in those discourses. This volume will be necessary reading for

students and scholars using quantitative data within the social sciences. *Kurt Gets Truckloads* McGraw-Hill Education Sett i gang is designed for the North American learner who is just starting to study Norwegian language and culture. Gyldendal A/S Pilgrimage, Landscape, and Identity: Reconstructing Sacred Geographies in Norway explores the ritual geography of a pilgrimage system that arose around medieval saints in Norway, a country now being transformed by petroleum riches,

neoliberalism, migration, and global warming. The study maps how pilgrims, hosts, church officials, and government officials participate in reshaping narratives of landscape, sacrality, and pilgrimage as a symbol of life journey, nation, identity, Christianity, and Protestant reflections on the durability of medieval Catholic saints.
